Digital marketing PPC Assessment

Section A – Basics (Short Answers)

1. What is PPC? Explain with an example.

PPC (Pay-Per-Click) is an online advertising model in which advertisers pay when someone clicks on their advertisement.

Example: A coaching class runs a Google Search Ad for “Digital Marketing Course in Rajkot.” When a student clicks the ad, the coaching class may pay Google for that click.

2. Difference between PPC and SEO

Ans:

PPC	SEO
PPC stands for Pay-Per-Click.	SEO stands for Search Engine Optimization.
It uses paid advertisements.	It improves organic search rankings.
Results can start quickly after approval and launch.	Results usually take time.
Advertisers pay for ad clicks.	Organic clicks do not have a direct per-click advertising cost.
Traffic may stop when the campaign stops.	Rankings and traffic can continue without an active ad campaign.

3. What is Quality Score? Factors affecting it.

Ans:

Quality Score is Google's diagnostic rating from 1 to 10 that helps advertisers understand the quality of their Search Ads compared with other advertisers.

The three main factors are:

1. Expected CTR: How likely people are to click the ad.
2. Ad Relevance: How closely the ad matches the user's search.
3. Landing Page Experience: How useful, relevant, and easy to navigate the landing page is.

4. What is CTR? Write the formula.

Ans:

CTR (Click-Through Rate) is the percentage of ad impressions that result in clicks.

$$ CTR=\frac{\text{Clicks}}{\text{Impressions}}\times100 $$

Example: If an ad receives 50 clicks from 1,000 impressions:

$$ CTR=\frac{50}{1000}\times100=5\% $$

5. Why is Landing Page Quality important for PPC?

Ans:

Landing Page Quality is important because it helps visitors find relevant information after clicking an advertisement. A good landing page loads quickly, works on mobile devices, matches the ad message, and has a clear call to action. It can improve user experience, conversions, and the landing page component of Quality Score.
