Module-4

Digital Marketing Assignment

Season-1

Q-1.

Create a table comparing Pay Per Click (PPC) advertising with organic search results, using examples from Google Search results for 'best headphones'. List at least 3 differences.

Ans:

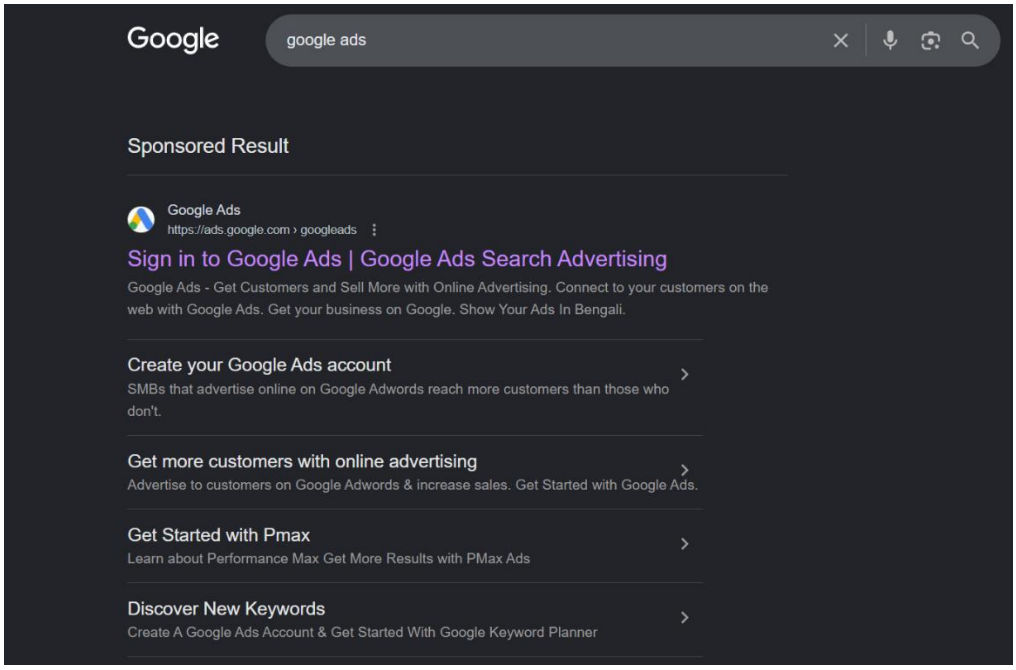

Difference	PPC Advertising	Organic Search Results
Position	Usually appears at the top of Google with a **"Sponsored"/"Ad"** label	Appears below paid ads without an ad label
Cost	Advertiser pays when someone clicks the ad	No direct payment is made for each click
Speed	Can start bringing traffic quickly after the campaign is launched	Usually takes time through SEO, content and website optimization
Example – "best headphones"	A headphone company may pay Google to show an ad for its headphones	Websites such as review sites or headphone guides may rank naturally

2.

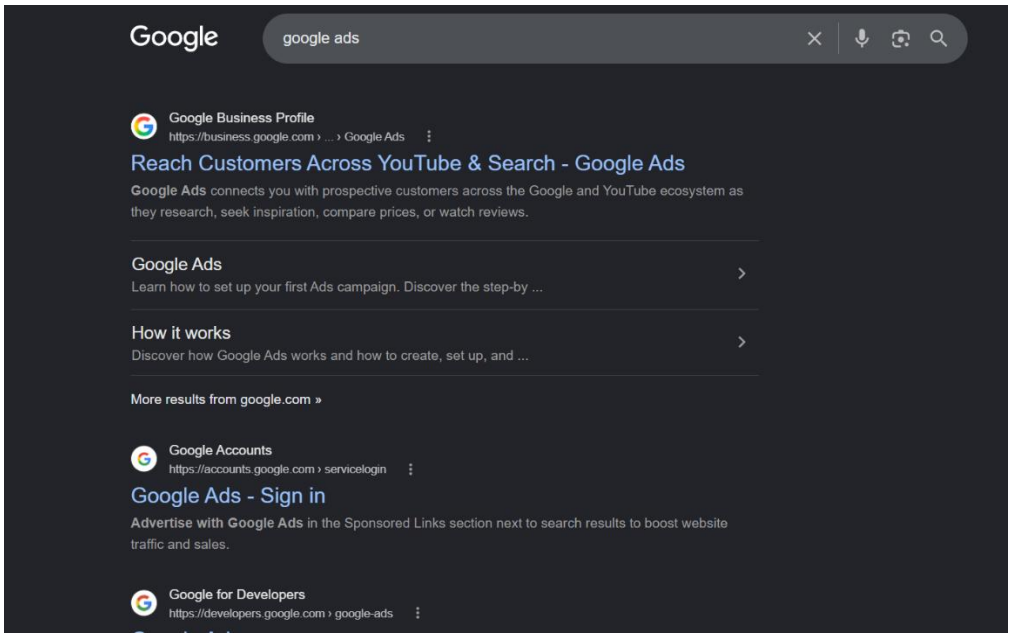

Search for 'online food delivery' on Google and identify which results are paid ads (PPC) and which are organic listings. Take a screenshot and highlight the PPC ads.

Ans:

Sponsored result:

Organic Result:

Screenshot Analysis:

I searched for “Google ads” on Google. The results marked “Sponsored” or “Ad” are paid PPC advertisements. The results appearing without the advertisement label are organic search listings. PPC ads are displayed because businesses are paying Google to promote their websites or services.

3.

Write a short scenario explaining how a Flipkart seller could use PPC ads to increase sales of a new smartphone model. Mention the keywords they might target and the expected outcome.

Ans:

Target keywords:

- “buy smartphone online”
- “new smartphone 2026”
- “best smartphone under ₹20,000”
- “5G smartphone”
- “buy 5G phone online”
- “new Android phone”

The seller can create Google Search Ads and send interested users to the smartphone's product page. The seller pays when someone clicks the advertisement.

Expected outcome:
PPC can increase the smartphone's visibility, website/product-page traffic, and potentially generate more sales and conversions, especially during the initial product launch.

Q-4.

List 3 advantages and 2 disadvantages of using PPC advertising for a new Zomato-style food delivery app launch.

Ans:

Advantages

1. **Quick visibility:** The new app can appear in front of potential customers immediately.
2. **Targeted audience:** Ads can target people searching for food delivery, restaurants, offers, etc.
3. **Measurable results:** The business can track clicks, conversions, installs and advertising costs.

Disadvantages

1. **Can be expensive:** Competitive food-delivery keywords can have high click costs.
2. **Traffic can stop when the budget stops:** Once the advertising campaign ends, the paid traffic generally stops.

Q-5.

Use ChatGPT to generate a list of 5 catchy Google Ads headlines for promoting a new IPL cricket fantasy league app. Paste the AI's suggestions and pick your favorite.

Ans:

5 Catchy Google Ads Headlines:

1. Play IPL Fantasy & Win Big
2. Create Your IPL Dream Team
3. Join the Ultimate IPL Fantasy
4. Play Fantasy Cricket This IPL
5. Build Your Team. Beat the League.

My Favorite Headline:

2. **Create Your IPL Dream Team**

Reason:

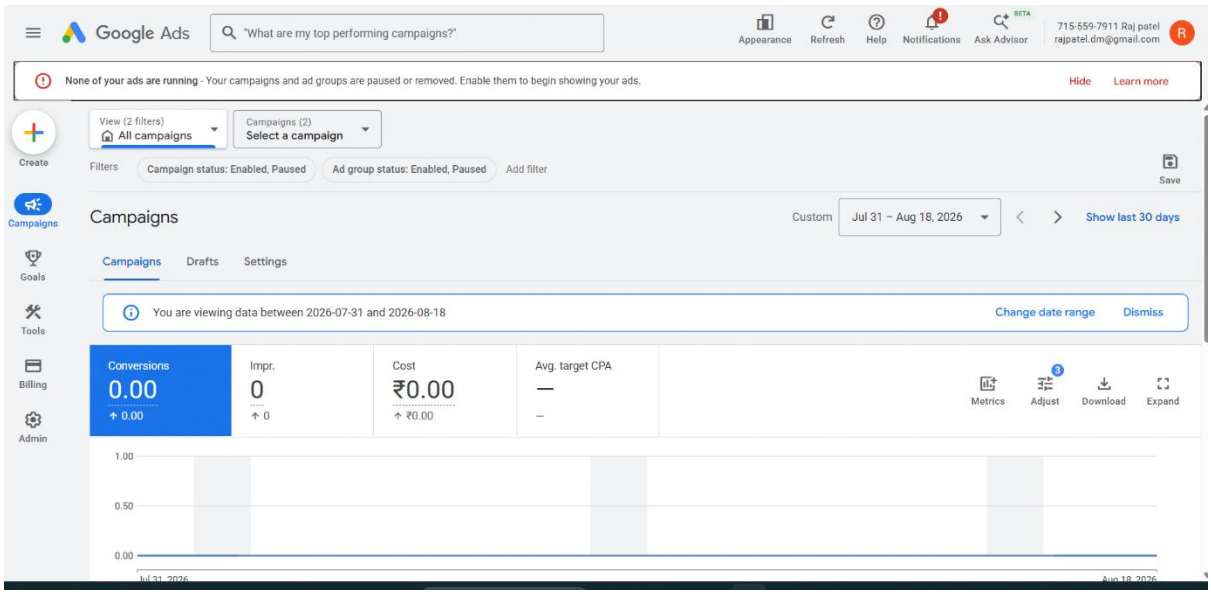

I like this headline because it is short, catchy, easy to understand, and directly relates to a fantasy cricket app.

Season-2

Q-1.

Create a new Google Ads account using your Gmail ID and take a screenshot of the account dashboard after setup.

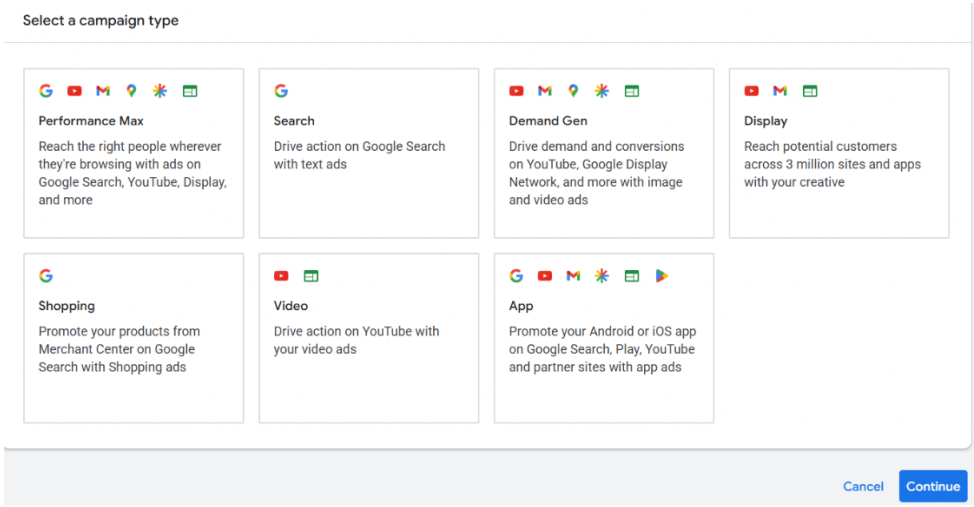

Ans:

Q-2.

List three campaign types available in Google Ads and, for each, give a real-world example using an app you use daily (e.g., promote a new Zomato offer, advertise a Flipkart sale, or get more installs for a music app like Spotify).

Ans:

Campaign Type	Real-world Example	Purpose
Search Campaign	Zomato promotes a special food-delivery offer when users search “food delivery near me.”	Reach users actively searching for a service.
Display Campaign	Flipkart shows banner ads for its upcoming sale on different websites and apps.	Increase awareness and promote offers.
App Campaign	Spotify promotes its mobile app to encourage users to install it.	Increase app installs and engagement.

Short answer: Google Ads provides different campaign types to reach customers through search, websites/apps, YouTube and other Google properties.

Q-3.

Choose a campaign objective in Google Ads (like Website Traffic, App Promotion, or Leads) and explain in 3-4 lines how this objective would help a brand like Myntra or BookMyShow achieve its marketing goals.

Ans:

Campaign Objective: Website Traffic

I choose **Website Traffic** as the campaign objective. This objective helps a brand like **Myntra** bring more visitors to its website. Myntra can show ads to people searching for products like “buy clothes online” or “women’s fashion online.” More website visitors can help Myntra increase product views, customer engagement, and sales.

Q-4.

For the keyword 'online food delivery', write one example each for Broad Match, Phrase Match, and Exact Match types as you would enter them in Google Ads.

Hint: Use the correct syntax for each match type (no symbols, quotes, or brackets for Broad Match; quotes for Phrase Match; square brackets for Exact Match).

Ans:

Match Types for: online food delivery

Match Type	How to Enter in Google Ads
Broad Match	online food delivery
Phrase Match	"online food delivery"
Exact Match	[online food delivery]

Remember:

- Broad → no symbols
- Phrase → " "
- Exact → [ ]

Q-5.

Use ChatGPT to generate a list of 10 potential keywords for a campaign promoting a new cricket score app during IPL season, then categorize each keyword as either Broad, Phrase, or Exact Match type.

Ans:

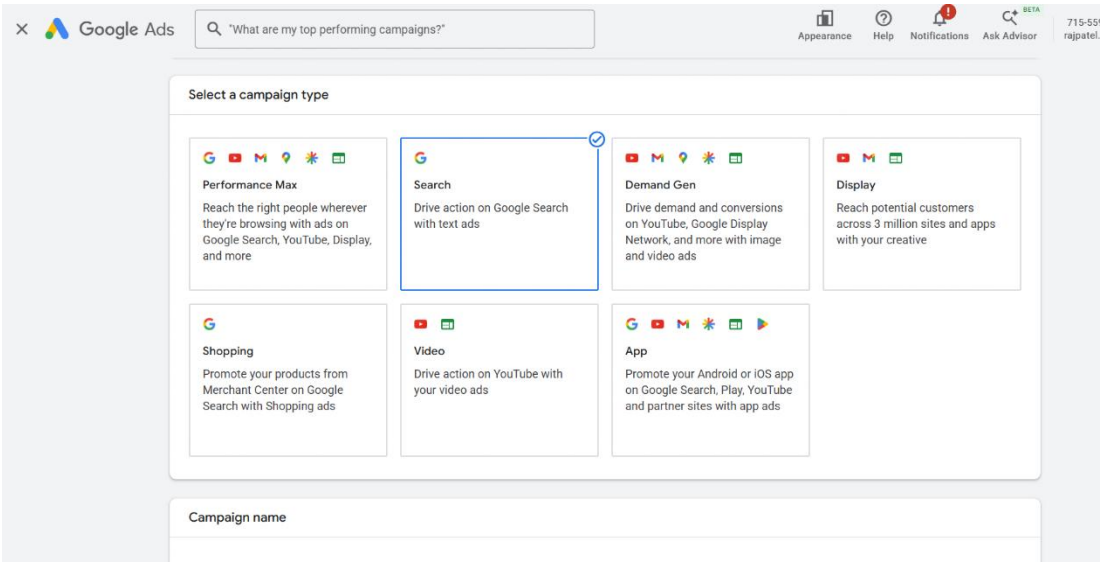

Keyword	Match Type	Google Ads Entry
cricket score app	Broad	cricket score app
live cricket score	Broad	live cricket score
IPL score app	Broad	IPL score app
cricket live score app	Phrase	"cricket live score app"
IPL live score	Phrase	"IPL live score"
live IPL cricket score	Phrase	"live IPL cricket score"
best cricket score app	Phrase	"best cricket score app"
cricket score app download	Exact	[cricket score app download]
IPL live score app	Exact	[IPL live score app]
live cricket score today	Exact	[live cricket score today]

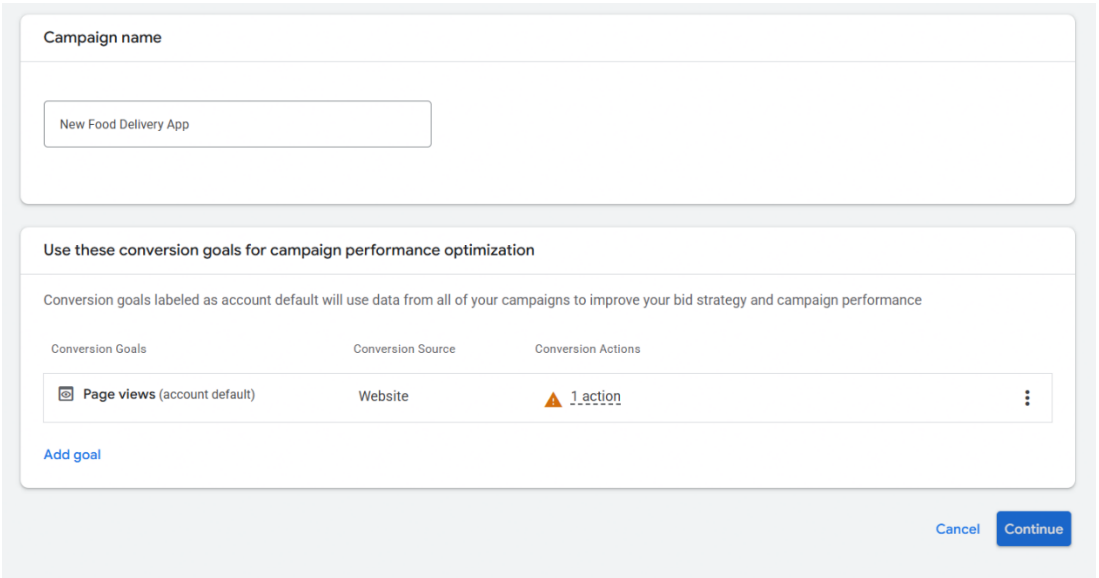

Season-3

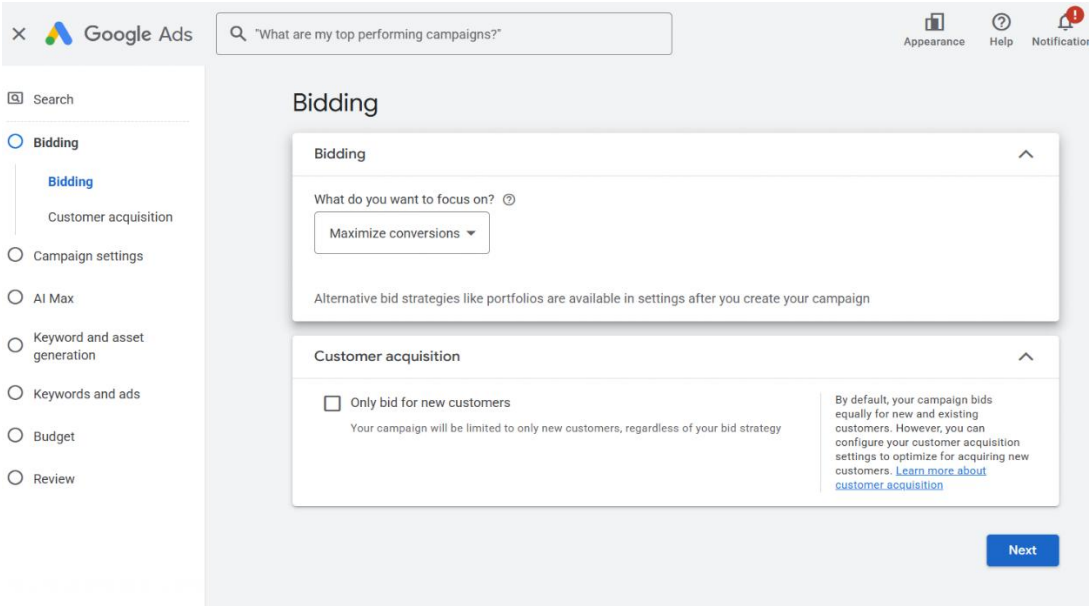

Q-1

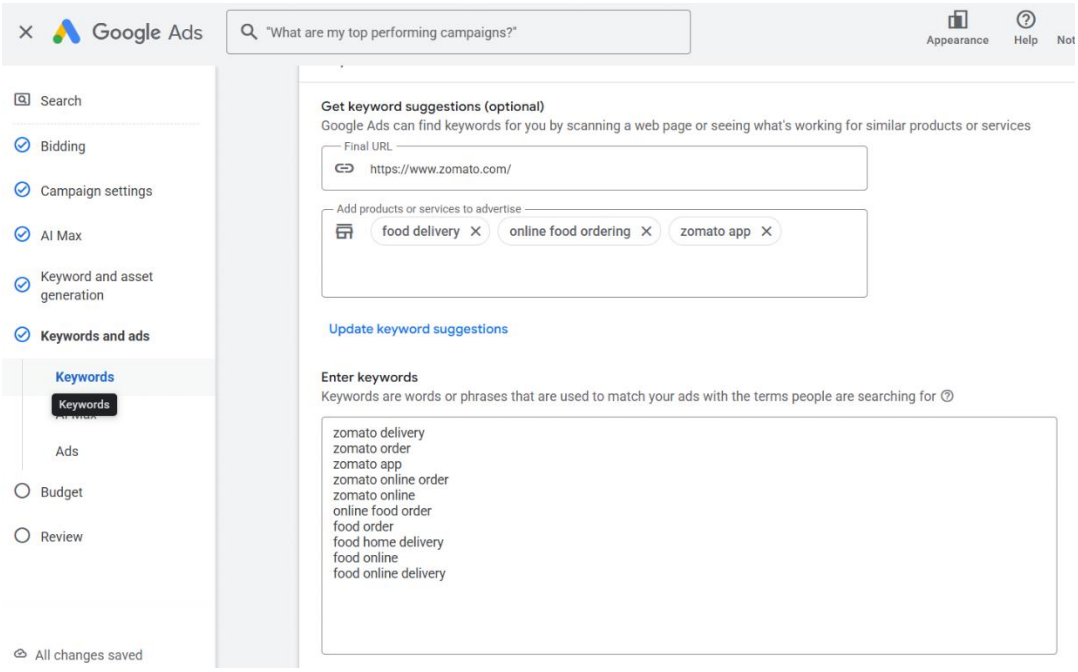

Create a mock Google Search campaign for a new food delivery app, setting a daily budget of ₹500 and choosing the 'Maximize Clicks' bidding strategy. List which keywords you would target and explain why.

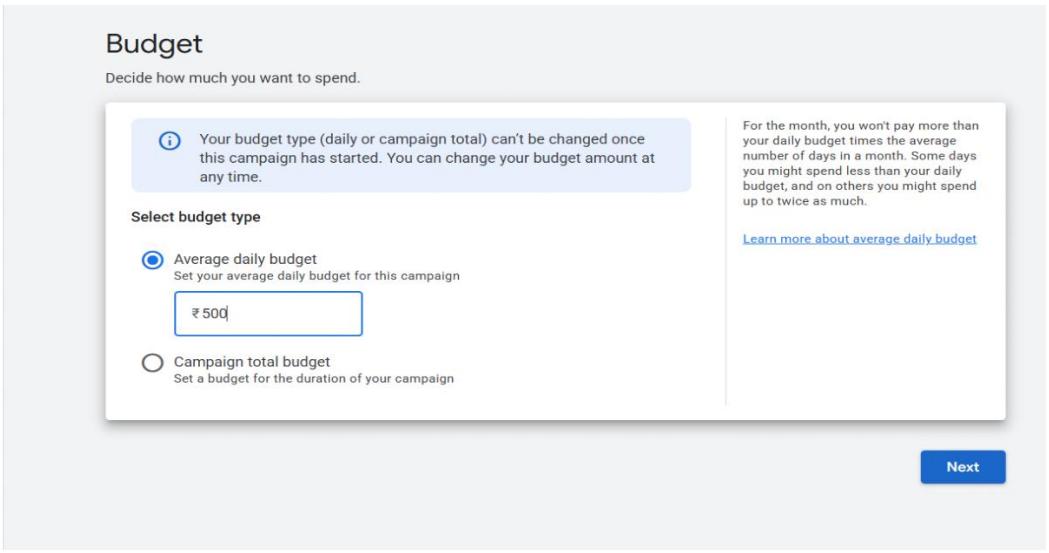

Ans:

Q-3.

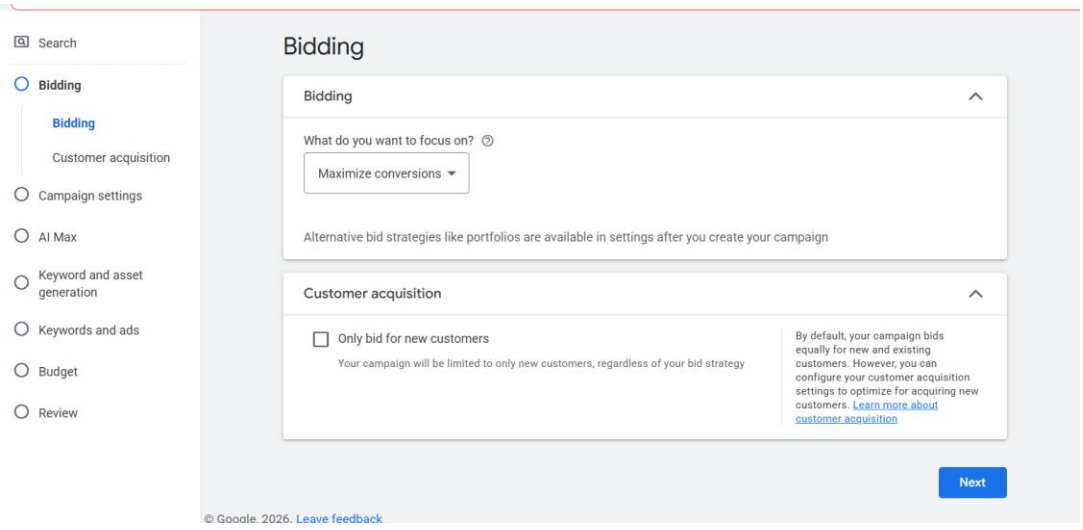

**Given a scenario where your Zomato-style app is getting lots of clicks but few conversions, adjust your campaign's bidding strategy and budget allocation to improve performance. Write out the steps you would take and justify each change.

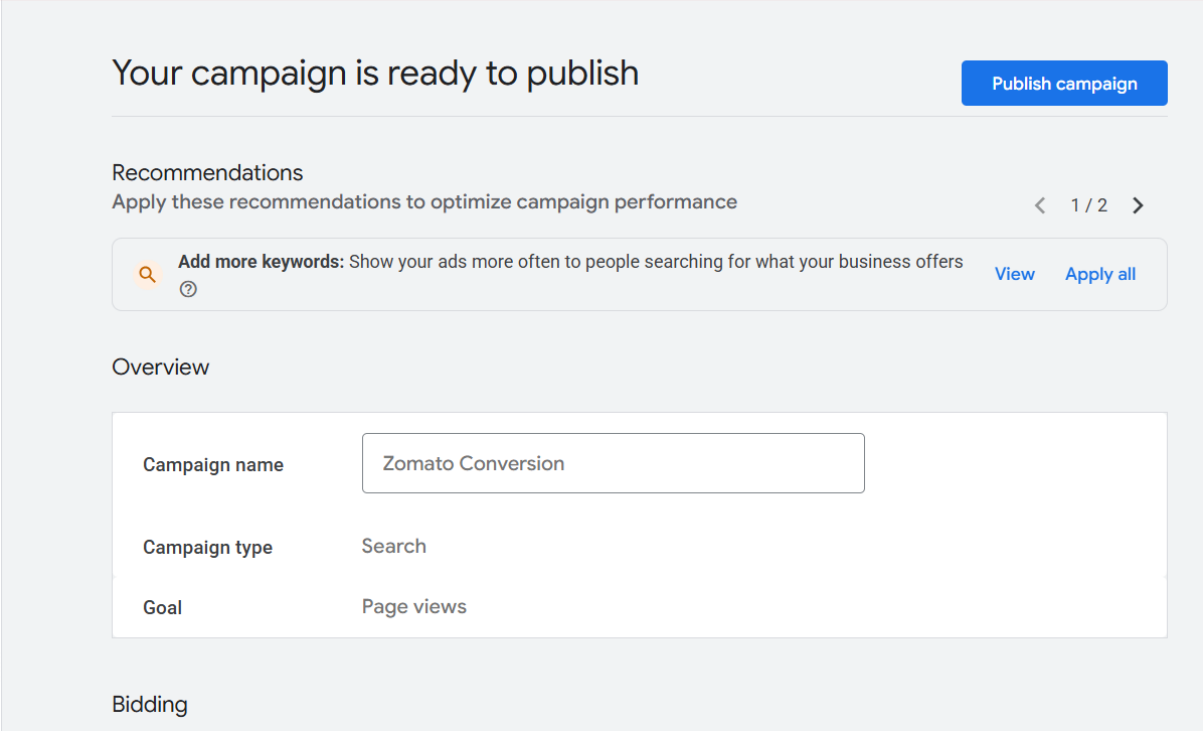

Hint: Consider switching to a 'Target CPA' or 'Maximize Conversions' bid strategy and reallocating budget to better-performing ad groups.**

Ans:

1. Change Bidding Strategy
I would change the bidding strategy from **Maximize Clicks** to **Maximize Conversions**. This will help focus the campaign on getting more orders instead of only getting clicks.

2. Use Target CPA
After collecting enough conversion data, I would test **Target CPA** to control the average cost of each conversion.

3. Reallocate Budget
I would give more budget to the ad groups and keywords that generate more conversions and reduce budget for poorly performing ad groups.

4. Add Negative Keywords
I would add irrelevant search terms as negative keywords to reduce unwanted clicks and save the budget.

5. Improve Landing Page
I would improve the landing page by making it faster, adding attractive offers, showing clear prices, and keeping an easy **Order Now** button.

Q-4.

Explain how you would set up a remarketing campaign to target users who visited your IPL ticket booking page but did not complete the purchase. Include which audience you would create and what ad message you would show.

Ans:

ScenarioSuppose a user visits my **IPL ticket booking page** but leaves the website without purchasing a ticket. I would use a remarketing campaign to bring that user back and encourage them to complete the purchase.

Steps to Set Up Remarketing Campaign

1. Create an Audience
I would create an audience named:

"IPL Ticket Page Visitors – No Purchase"

This audience will include users who visited the IPL ticket booking page but did not complete the purchase.

2. Add Remarketing Tag
I would add the Google Ads remarketing tag to the website so that visitors can be added to the audience.

3. Exclude Purchasers
I would exclude users who have already completed the ticket purchase.

4. Create a Display Remarketing Campaign
I would create a Display campaign and target the **"IPL Ticket Page Visitors – No Purchase"** audience.

5. Create the Ad

Headline:
🏏 **Don't Miss the IPL Live!**

Description:

Your IPL tickets are waiting! Complete your booking now and enjoy the excitement live in the stadium.

CTA:
Book Tickets Now

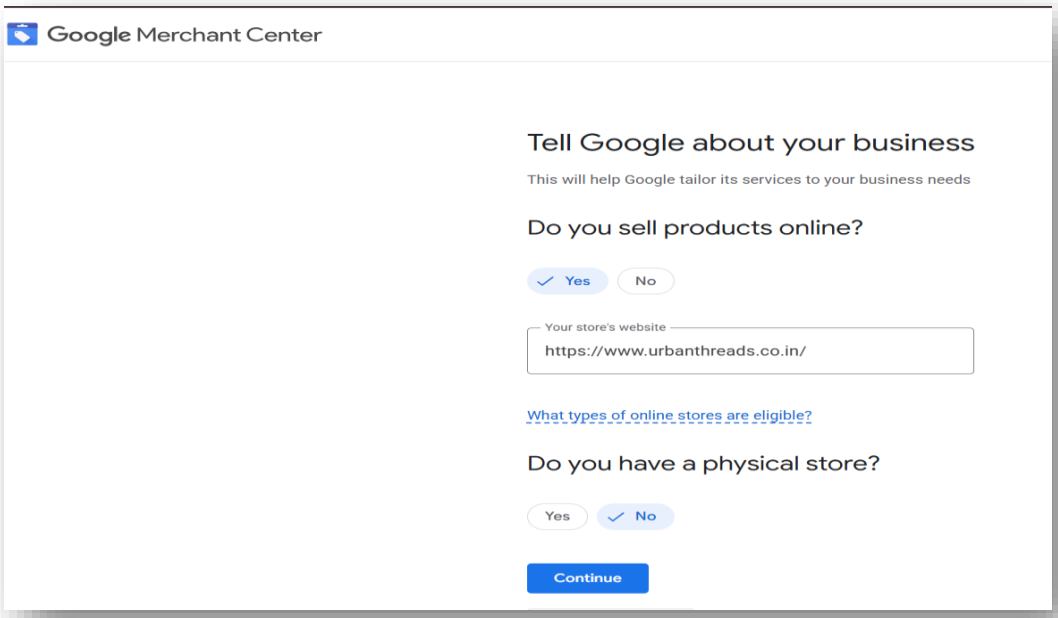

Season-4

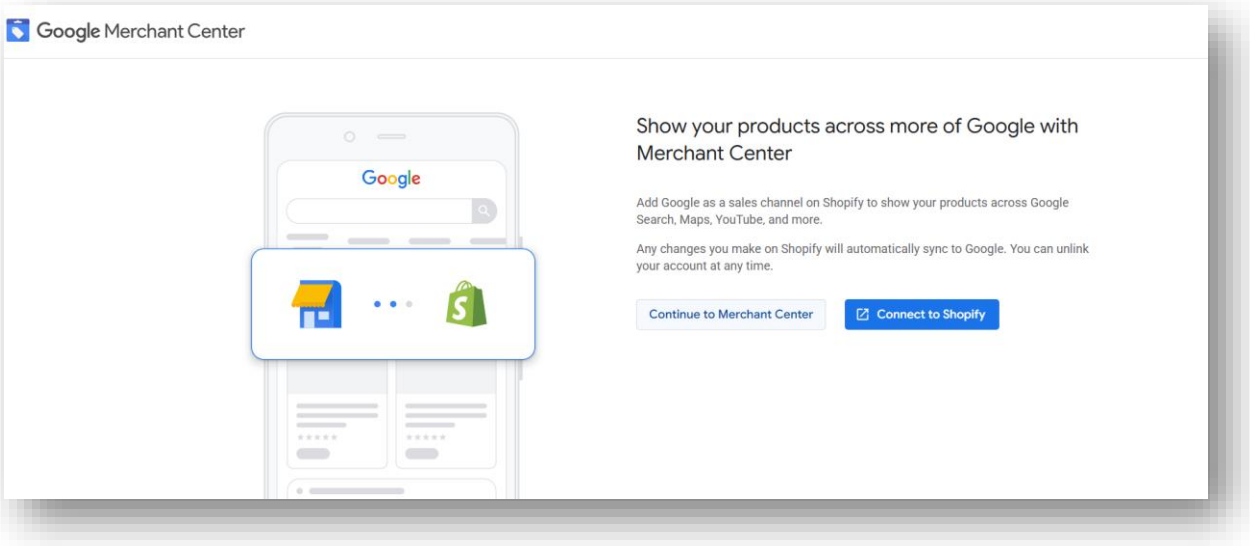

1.

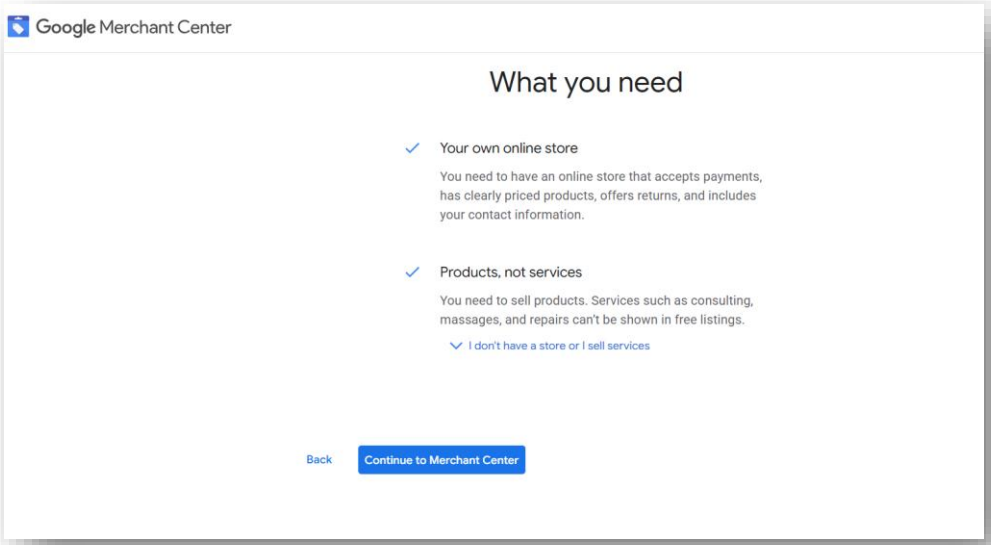

**Sign up for a Google Merchant Center account and add a mock product listing for a smartphone, including product title, image URL, price, and availability status.

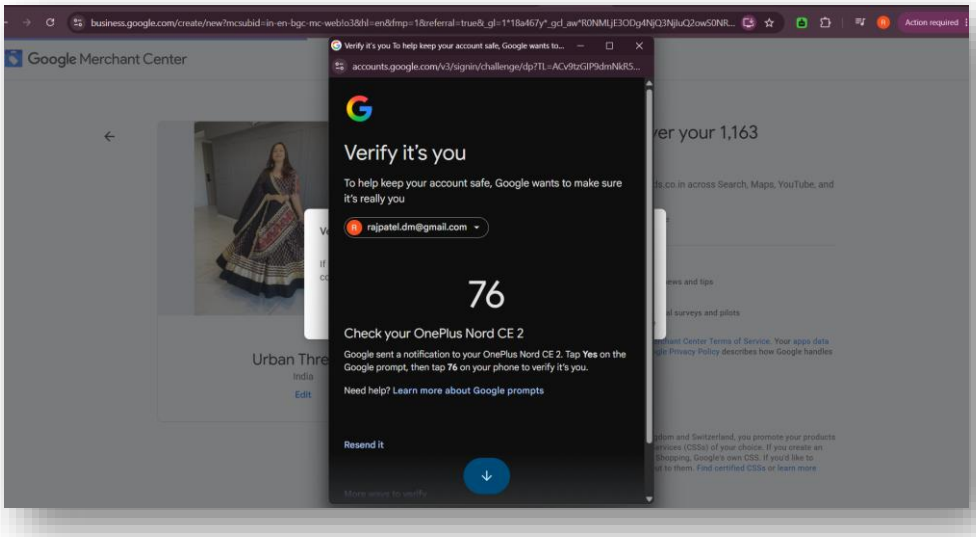

Hint: Use sample data and images from any e-commerce site (like Flipkart) for practice.**

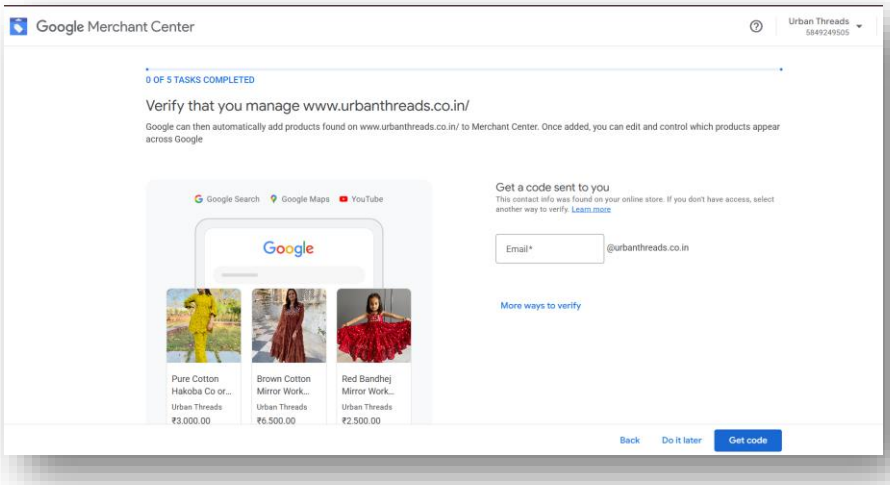

Ans:

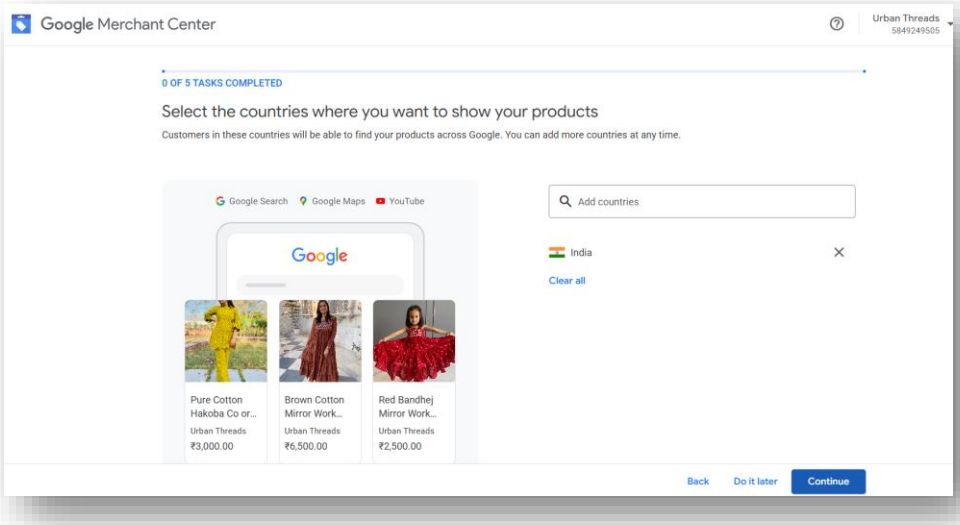

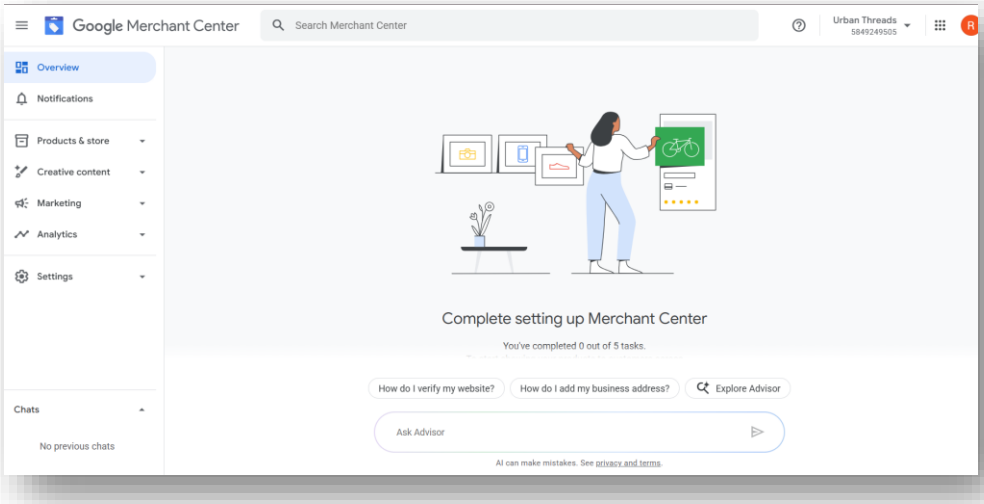

Google Merchant Center
What you need
Your own online store
You need to have an online store that accepts payments, has clearly priced products, offers returns, and includes your contact information.
Products, not services
You need to sell products. Services such as consulting, massages, and repairs can't be shown in free listings.
I don't have a store or I sell services

Q-2.

**Create a basic HTML page for a tech blog and integrate Google AdSense ad code into the sidebar area.

Hint: Use the AdSense demo ad code if you do not have a real account.**

Ans:

```
<!DOCTYPE html>

<html>

<head>

  <title>Tech World Blog</title>

  <style>
```

```
body {
    font-family: Arial, sans-serif;
    margin: 0;
    background: #f5f5f5;
}
header {
    background: #222;
    color: white;
    padding: 20px;
    text-align: center;
}
.container {
    display: flex;
    max-width: 1100px;
    margin: 20px auto;
    gap: 20px;
}
.content {
    background: white;
    padding: 20px;
    flex: 3;
}
.sidebar {
    background: white;
    padding: 20px;
    flex: 1;
}
.ad-box {
    margin-top: 20px;
```

```
            padding: 10px;
            text-align: center;
        }
    </style>
</head>
<body>
<header>
    <h1>Tech World Blog</h1>
    <p>Latest Technology News & Tips</p>
</header>
<div class="container">
    <div class="content">
        <h2>Top Smartphone Trends in 2026</h2>
        <p>
            Smartphones are becoming more powerful with AI features,
            better cameras, faster processors and improved battery life.
        </p>
        <h3>AI in Smartphones</h3>
        <p>
            Modern smartphones are using artificial intelligence
            for photography, voice assistants and personalization.
        </p>
    </div>
    <div class="sidebar">
        <h3>Advertisement</h3>
        <div class="ad-box">
            <!-- AdSense demo/placeholder area -->
            <ins class="adsbygoogle"
                 style="display:block"
```

```
            data-ad-client="ca-pub-XXXXXXXXXXXXXXXX"
            data-ad-slot="XXXXXXXXXX"
            data-ad-format="auto"
            data-full-width-responsive="true">
        </ins>
      </div>
    </div>
</div>
</body>
</html>
```

Important:

The ca-pub-XXXXXXXXXXXXXXXX and XXXXXXXXXX values are **placeholders**. They are not a real AdSense ad unit.

For an actual AdSense implementation, the publisher must use the ad code supplied by their own approved AdSense account. Google also requires publishers to comply with its publisher policies.

Q-3.

Research and list 3 major policy requirements you must follow when using Google AdSense on a website that reviews mobile apps, and explain why each is important.

Ans:

1. Use original and valuable content

A website should provide useful, original content instead of simply copying or slightly rewriting content from other websites.

Why important:
Google does not want ads displayed alongside low-value or replicated content. Original app reviews should contain your own analysis, screenshots where permitted, comparisons and useful opinions.

Example:
Instead of copying an app description from the Play Store, write your own review of its features, usability, advantages and disadvantages.

2. Do not generate invalid clicks or impressions

Publishers must not click their own ads or encourage other people to click ads.

Why important:
Artificial clicks can create invalid traffic and increase advertiser costs unfairly. Google monitors clicks and impressions and can restrict or close accounts for serious violations.

Example:
Do not write:

"Please click the advertisement to support my website."

3. Do not place ads on prohibited or low-value content

Ads must not be placed alongside content that violates Google's publisher policies. Google also does not allow Google-served ads on screens with no publisher content or very low-value content.

Why important:
This protects users, advertisers and the quality of Google's advertising ecosystem.

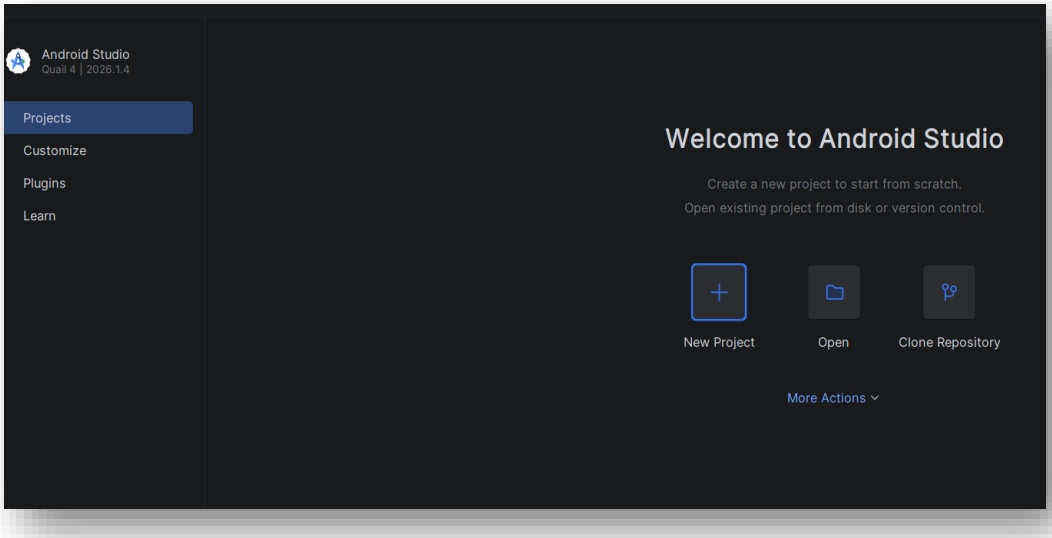

Example for an app-review website:
An app review should contain meaningful information instead of a nearly empty page created only to display advertisements.

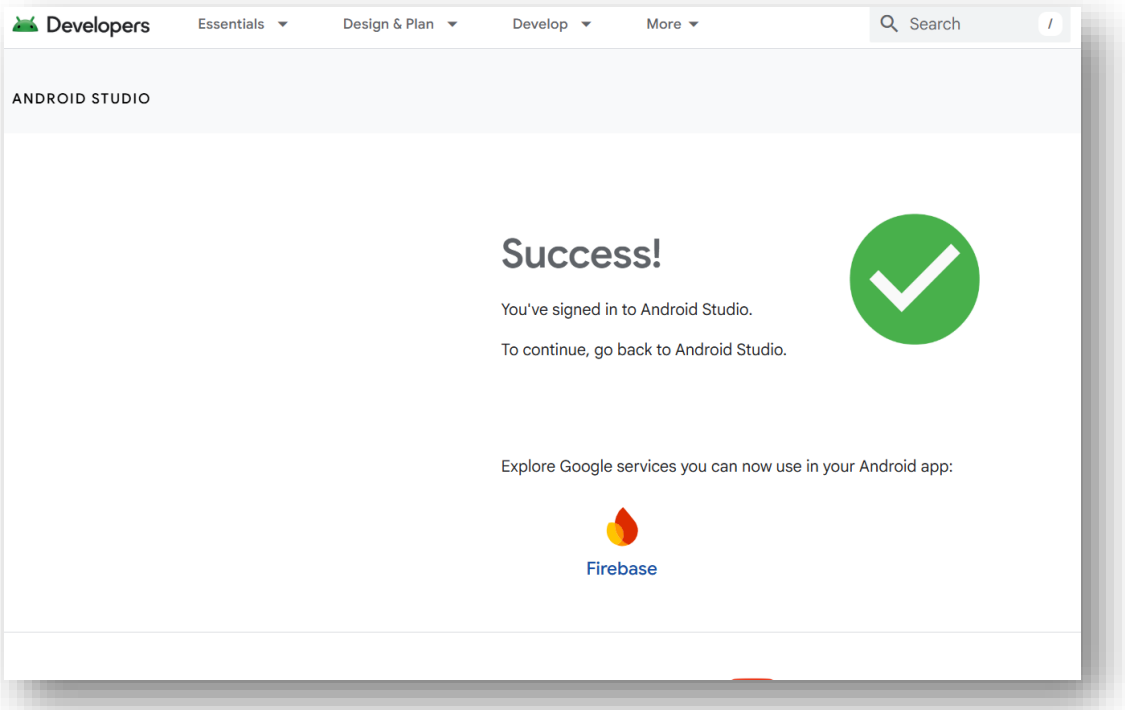

Q-4.

Download and set up the Google Mobile Ads SDK in a new Android Studio project, then add a test AdMob banner ad to the main activity layout.

Hint: Use the official AdMob test ad unit ID to avoid policy violations.

Ans:

Q-5.

Use ChatGPT to generate a checklist for optimizing a Google Merchant Center product feed for maximum visibility and compliance, then review and apply at least 2 suggestions to your mock product listing.

Ans:

No.	Optimization	Done
1	Use a clear and specific product title	✅
2	Add an accurate product description	✅
3	Use a high-quality product image	✅
4	Use the correct product price	✅
5	Keep availability accurate	✅
6	Add brand information	✅
7	Add GTIN/MPN when applicable	✅
8	Use a valid product landing-page URL	✅
9	Make feed information match the website	✅
10	Check Merchant Center for errors	✅

Applying 2 improvements to our mock product

Improvement 1 — Better Product Title

Before:

Samsung Phone

After:

Samsung Galaxy A55 5G 8GB RAM 128GB Smartphone

A specific title makes it clearer what the product is and can help Google match the product with relevant searches.

Improvement 2 — Better Product Description

Before:

Samsung phone with good features.

After:

Samsung Galaxy A55 5G smartphone with 8GB RAM and 128GB internal storage. It is designed for everyday use, photography, entertainment and multitasking.

Final Optimized Mock Listing

Attribute	Optimized Data
ID	PHONE001
Title	Samsung Galaxy A55 5G 8GB RAM 128GB Smartphone
Description	Samsung Galaxy A55 5G smartphone with 8GB RAM and 128GB internal storage. Designed for everyday use, photography, entertainment and multitasking.
Price	₹32,999 INR
Condition	New
Availability	In stock
Brand	Samsung
Image	High-quality smartphone product image
Link	Product landing page

Season-5

Q-1.

Use ChatGPT to generate 5 unique Google Search ad headlines for a new food delivery app in your city (think Zomato/Swiggy competitor). Copy the best 3 into a Google Doc and explain in 1-2 lines why you think each would attract clicks.

Ans:

1. Quick Food Delivery Near You

This headline matches what people may search when they want food quickly. The words "Near You" make it feel local and relevant.

2. Order Your Favourite Food Online

This directly communicates the main benefit of the app—ordering favourite food online. It can attract users who are already looking for food delivery.

3. Get Food Delivered Fast

This headline focuses on speed and convenience. Users who are hungry and want quick delivery may be encouraged to click.

4. Delicious Food At Your Door

This highlights the convenience of getting food delivered directly to the customer's doorstep.

5. Discover Local Food & Deals

This combines food discovery with deals, which can attract users interested in trying new restaurants while saving money.

Best 3 headlines selected:

1. Quick Food Delivery Near You
2. Order Your Favourite Food Online
3. Get Food Delivered Fast

Q-2.

Write 2 versions of a Google Ads description for a Flipkart-style online electronics sale, one focused on discounts and one focused on fast delivery. Compare which version you think would perform better and

**why.

Hint: Consider what motivates users to click: savings or convenience?**

Ans:

Version 1 – Discount Focused

Description:
Big Electronics Sale! Get exciting discounts on smartphones, laptops, TVs and more. Shop now and save more.

Version 2 – Fast Delivery Focused

Description:
Shop the latest electronics online and get your order delivered quickly to your doorstep. Easy shopping, fast delivery.

Comparison

The **discount-focused version** may attract more clicks because price savings are a strong reason for users to click during an online sale. However, the fast-delivery version may appeal more to users who already know what they want and value convenience.

For this assignment, I would test both versions using an A/B test and compare their CTR and conversions rather than assuming one will always perform better.

3.

Find an Instagram ad for a mobile app (any category: music, shopping, payments, etc). Rewrite the main ad text to fit Google Search ad format (1 headline + 1 description), keeping the original message but adapting for search intent.

Ans:

Original Ad Message

“Say goodbye to delays. Paytm UPI sends money instantly.”

Google Search Ad

Headline:
Paytm UPI – Send Money Instantly

Description:
Send money quickly with Paytm UPI. Make easy digital payments and enjoy a simple payment experience.

Why this adaptation works

The Instagram message is changed into a search-focused format by putting the main service and benefit—Paytm UPI and fast money transfer—directly in the headline and description.

Q-4.

Brainstorm 3 creative ideas for Google Display Ads (banner visuals + short text) to promote a new IPL cricket fantasy league app. For each, describe the main image you'd use and write the banner text.

Constraint: Keep banner text under 8 words for maximum impact.

Ans.

Idea 1 – Build Your Dream Team

Main Image:
A cricket stadium with a fantasy-team screen showing a batsman, bowler and all-rounder.

Banner Text:
Build Your Dream IPL Team

Visual Concept:
Show the fantasy team players on one side and a mobile phone displaying the app on the other side.

Idea 2 – Every Match Matters

Main Image:
A cricket player hitting a powerful shot with stadium lights and cheering fans in the background.

Banner Text:
Every Match. Every Player. Your Fantasy.

Visual Concept:
Use an energetic cricket-action image with the app logo and a clear "Play Now" button.

Idea 3 – Turn Cricket Into Fantasy

Main Image:
A smartphone displaying a fantasy cricket leaderboard with cricket players in the background.

Banner Text:
Turn Cricket Into Your Fantasy

Visual Concept:
Use a bold cricket background, a large mobile-app mockup and a simple CTA such as “Join Now.”

Q-5.

Use ChatGPT to suggest 3 alternative calls-to-action (CTAs) for a Paytm UPI cashback campaign ad. Test each CTA by asking 2 friends which one makes them most likely to click, and note the winning CTA.

Ans:

CTA Options

1. **Get Cashback Now**
2. **Pay & Earn Cashback**
3. **Claim Your Cashback**

Friend Testing

Ask Friend 1 and Friend 2:

“If you saw these three CTAs in a Paytm UPI cashback ad, which one would make you most likely to click?”

CTA	Friend 1	Friend 2
Get Cashback Now	___	___
Pay & Earn Cashback	___	___
Claim Your Cashback	___	___

Winning CTA

Winning CTA: Pay & Earn Cashback

Reason:
The CTA selected by both/most friends will be considered the winning CTA because the small user test indicates that it was the most motivating option among the three.

Important: I have left the winner blank because the assignment specifically asks you to test the CTAs with your **2 friends**. You should enter their actual choices rather than making up the test result.

Season-6

Q-1.

Use ChatGPT to generate 10 catchy headline options for a Flipkart Diwali Sale Google Search Ad targeting mobile shoppers. Copy your 3 favorite headlines into a document.

Ans:

1. Flipkart Diwali Sale – Up to 80% Off
2. Diwali Mega Sale on Smartphones
3. Big Diwali Deals on Mobile Phones
4. Upgrade Your Phone This Diwali
5. Best Mobile Deals This Diwali
6. Diwali Sale – Grab Your Dream Phone
7. Huge Discounts on Smartphones
8. Shop Diwali Mobile Deals Today
9. Top Smartphone Deals at Great Prices
10. Diwali Dhamaka – Mobile Deals Live

My 3 favorite headlines:

- Flipkart Diwali Sale – Up to 80% Off
- Diwali Mega Sale on Smartphones
- Upgrade Your Phone This Diwali

2.

**Write a Google Ads description (max 90 characters) for a Zomato food delivery offer, then use ChatGPT to suggest 3 alternative phrasings focused on speed, savings, or variety.

Hint: Ask ChatGPT to "rewrite this description with a focus on [your chosen angle]".**

Ans:

Original description — max 90 characters:

Order your favorite food on Zomato with exciting offers. Get it delivered fast!

3 alternative phrasings

Speed-focused:

Craving food? Order now and enjoy fast delivery straight to your doorstep!

Savings-focused:

Save more on your favorite meals with exciting Zomato food delivery offers!

Variety-focused:

Explore thousands of dishes and restaurants on Zomato. Order your favorites now!

Q-3.

Pick a Myntra fashion sale campaign. Use ChatGPT to brainstorm 2 different A/B test ideas for ad headlines or descriptions, explaining what user behavior or click metric each test could improve.

Ans:

A/B Test Idea 1: Discount vs Urgency

Version A:

Myntra Fashion Sale – Up to 70% Off

Version B:

Hurry! Myntra Sale Ends Soon – Shop Now

What to measure:
Compare **CTR (Click-Through Rate)** to see whether discount-focused or urgency-focused headlines attract more clicks.

A/B Test Idea 2: New Collection vs Price

Version A:

Shop the Latest Fashion Trends on Myntra

Version B:

Trendy Fashion at Amazing Prices – Shop Now

What to measure:
Compare **CTR and conversion rate** to understand whether users respond more to new-fashion messaging or price-focused messaging.

Q-4.

Take one of your ChatGPT-generated ad headlines and manually tweak it to better fit Indian Gen Z slang or emoji usage. Compare both versions and explain which you think would perform better and why.

Ans:

Original headline:

Diwali Mega Sale on Smartphones

Manually tweaked headline:

🔥 Diwali Dhamaka! Smartphones at Crazy Deals 📱

Comparison

Original	**Tweaked**
Diwali Mega Sale on Smartphones	🔥 Diwali Dhamaka! Smartphones at Crazy Deals 📱
Simple and professional	More youthful and energetic
No emoji	Uses emojis
General audience	More suitable for Gen Z-style communication

My explanation:

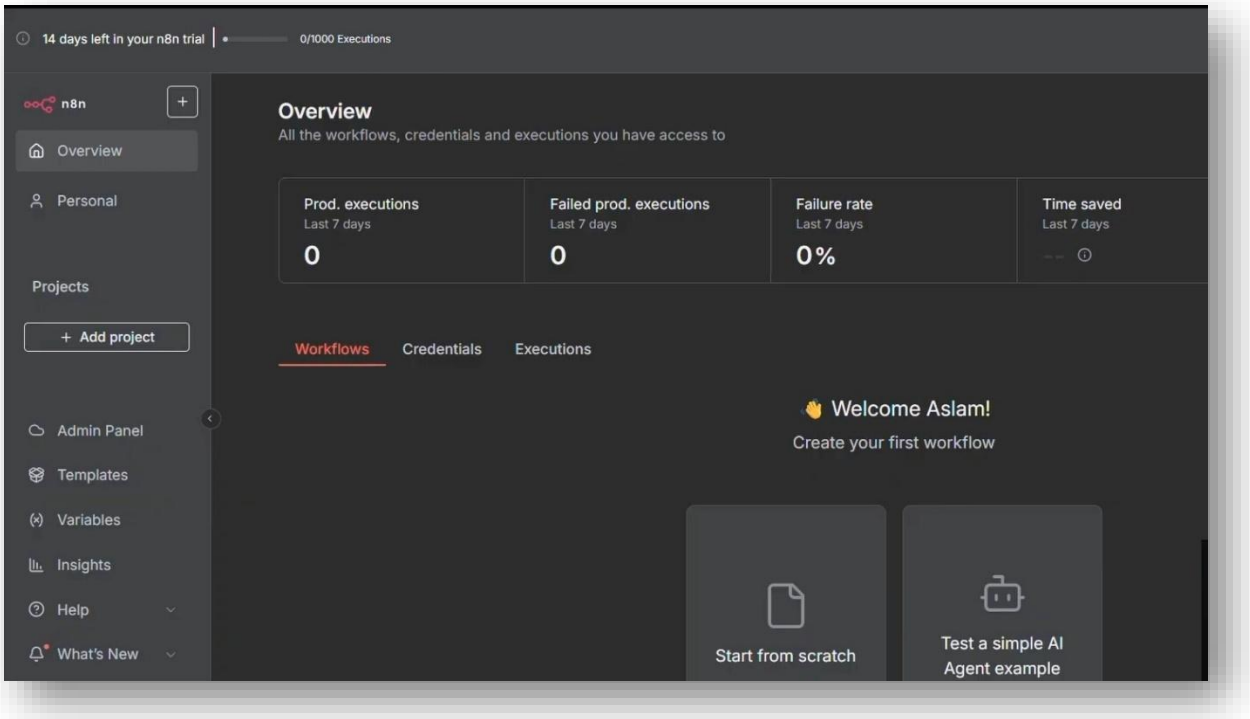

The tweaked version may attract more attention from younger mobile shoppers because words like **“Dhamaka”** and **“Crazy Deals”**, along with emojis, make the ad feel more energetic and festive. However, the actual performance should be confirmed by comparing metrics such as **CTR and conversions** in an A/B test.

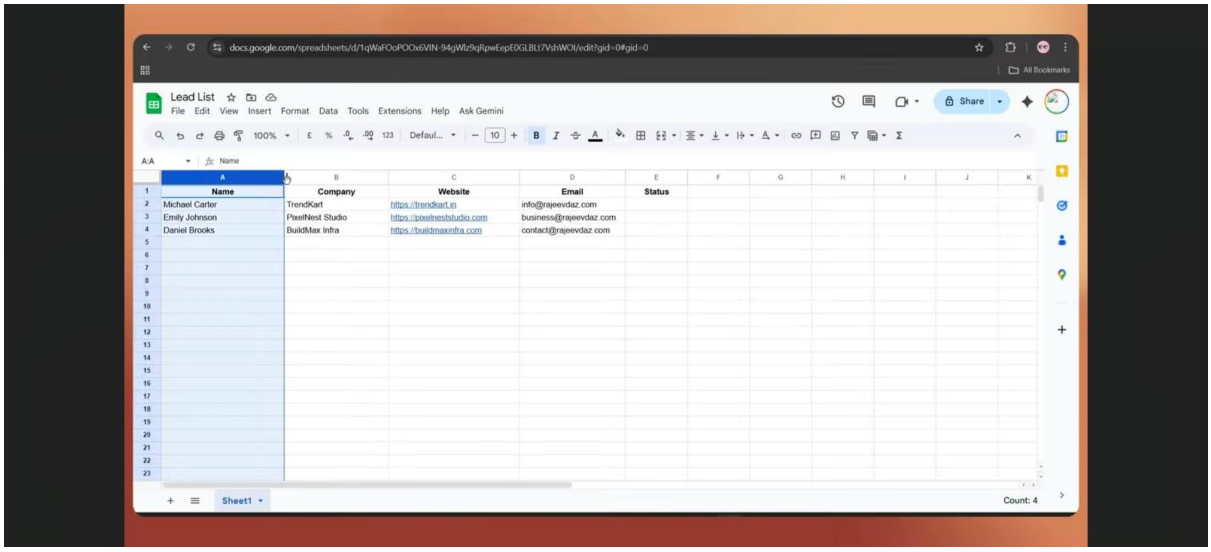

Season-7

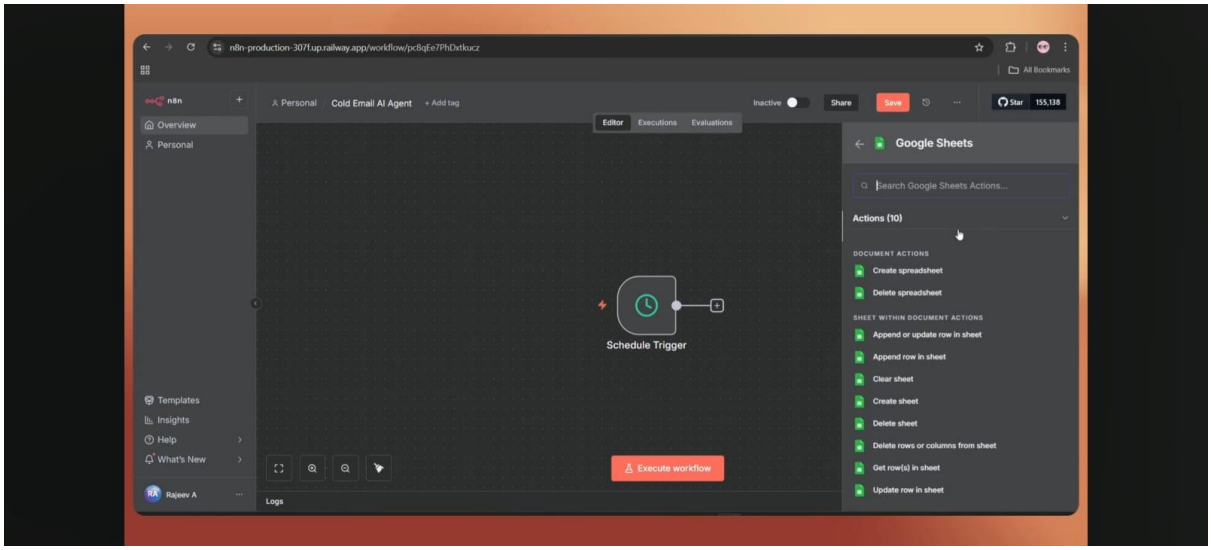

Q-1.

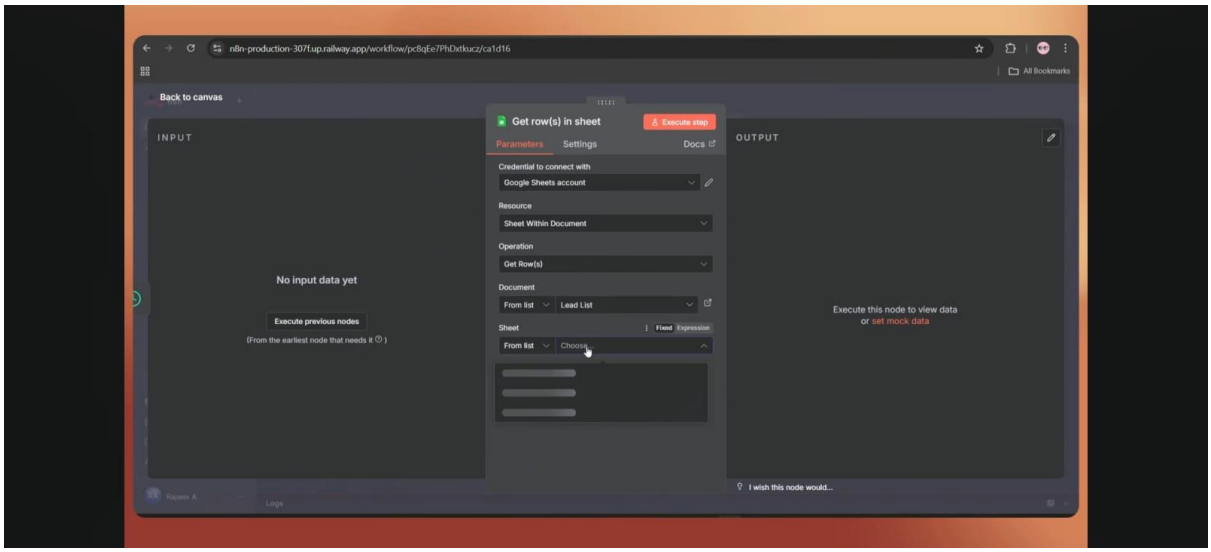

Sign up for a free n8n cloud account and create your first workflow that triggers manually and sends a simple notification email to yourself.

Q-2.

Connect your Google Ads account to n8n using the Google Ads node, and fetch the last 3 days' campaign performance data (impressions, clicks, cost) into your workflow.

Hint: Use the Google Ads API credentials and select the 'Get Reports' operation in the node.

Ans:

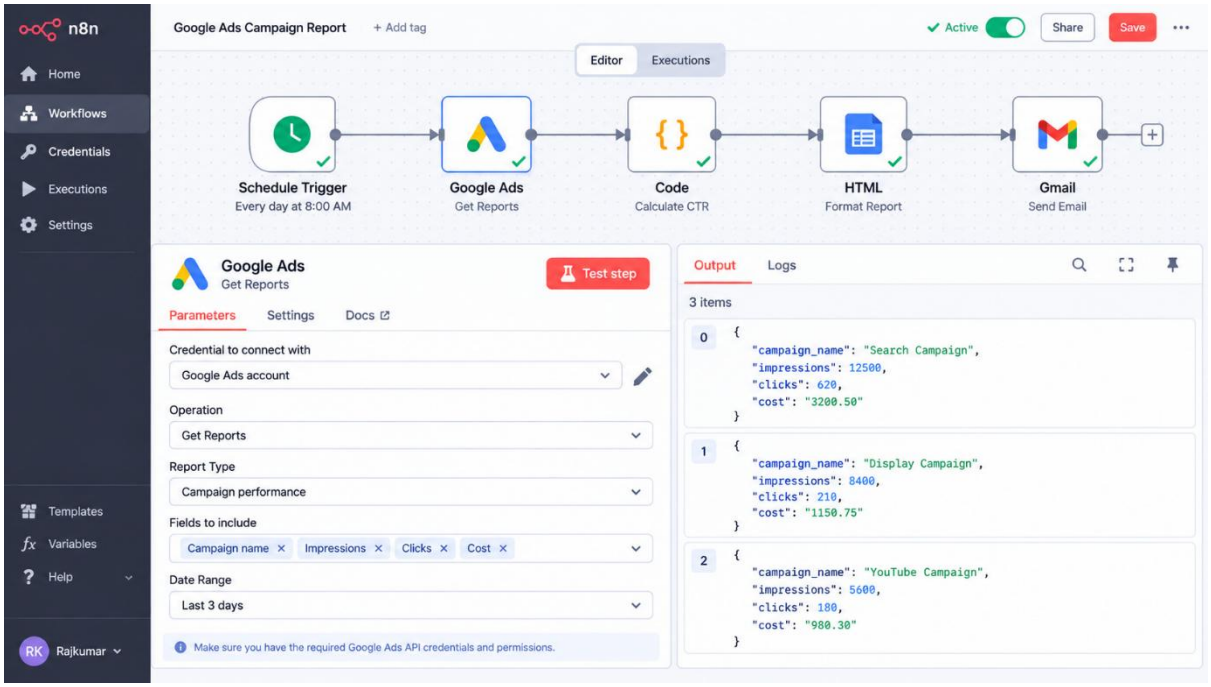

Use the image above as a reference screenshot for your assignment. It shows the Google Ads node configuration and sample output.

Follow these settings:

1. Credential: Google Ads account

2. Operation: Get Reports
3. Report Type: Campaign Performance
4. Fields: Campaign Name, Impressions, Clicks, Cost
5. Date Range: Last 3 days
6. Click Test step to fetch the data.

Result: Google Ads campaign performance data is fetched into the n8n workflow.

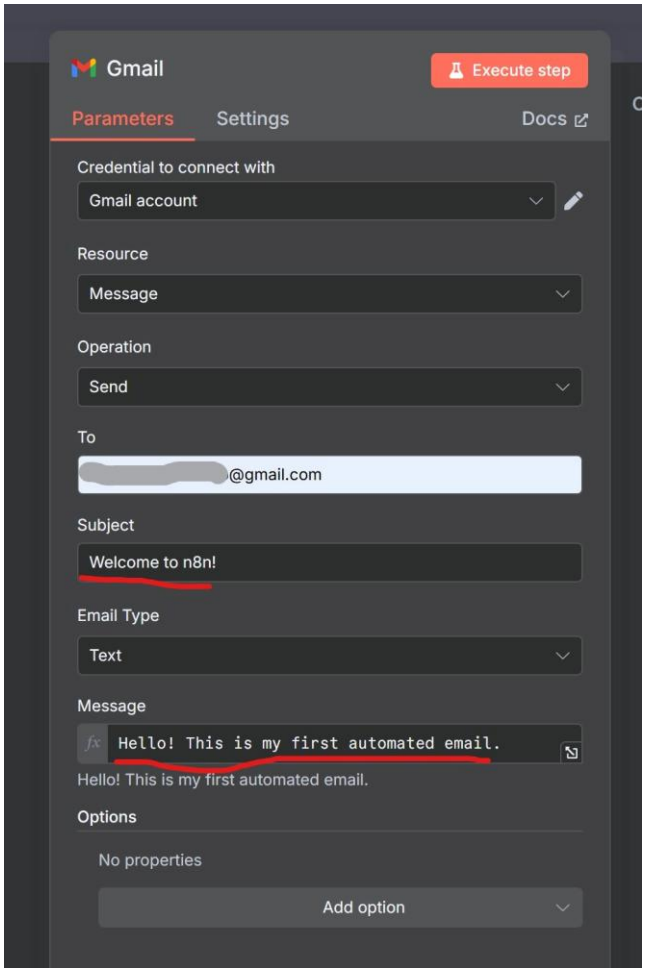

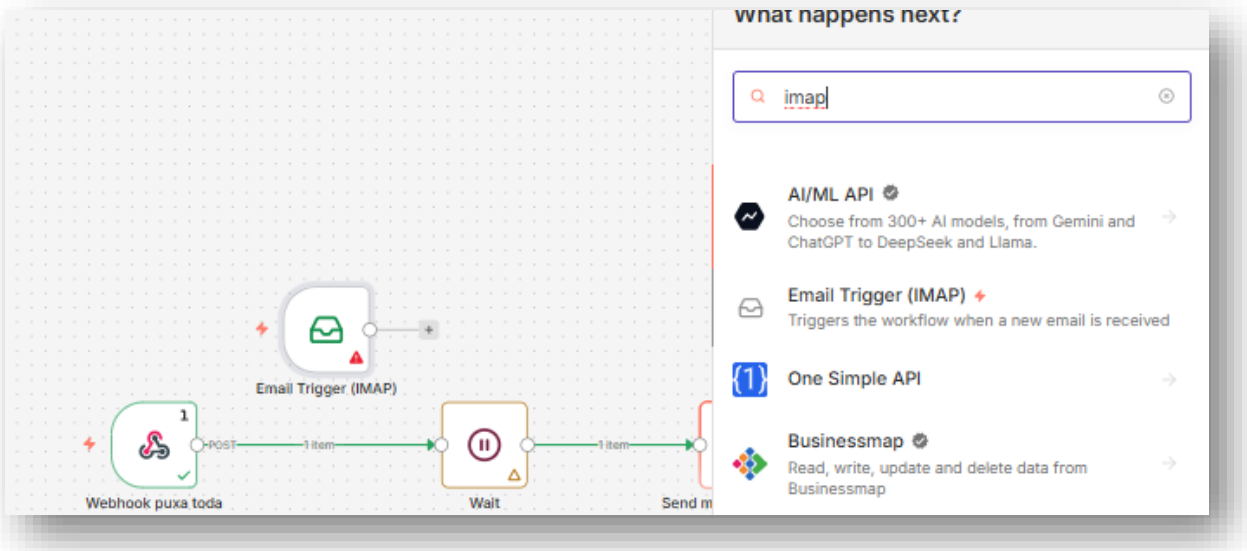

Q-3.

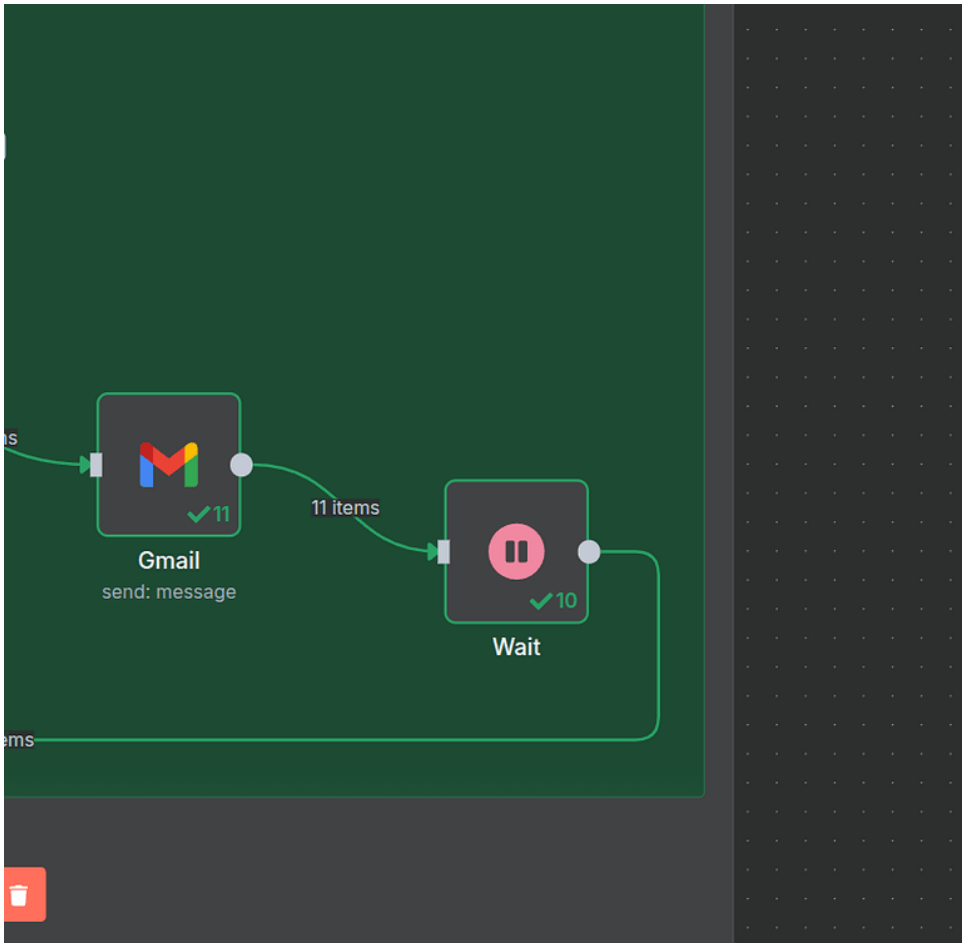

Add a step to your n8n workflow that formats the fetched Google Ads data into a summary table and sends it as an email report to your Gmail address.

Ans:

1. Add a **Code** node after Google Ads (use the code from Step 5).
2. Add a **Gmail** node after it.
3. Set the email type to **HTML**, and in the message field enter {{ $json.html }}.
4. Set the subject to “Google Ads Summary” and click Execute.

Q-4.

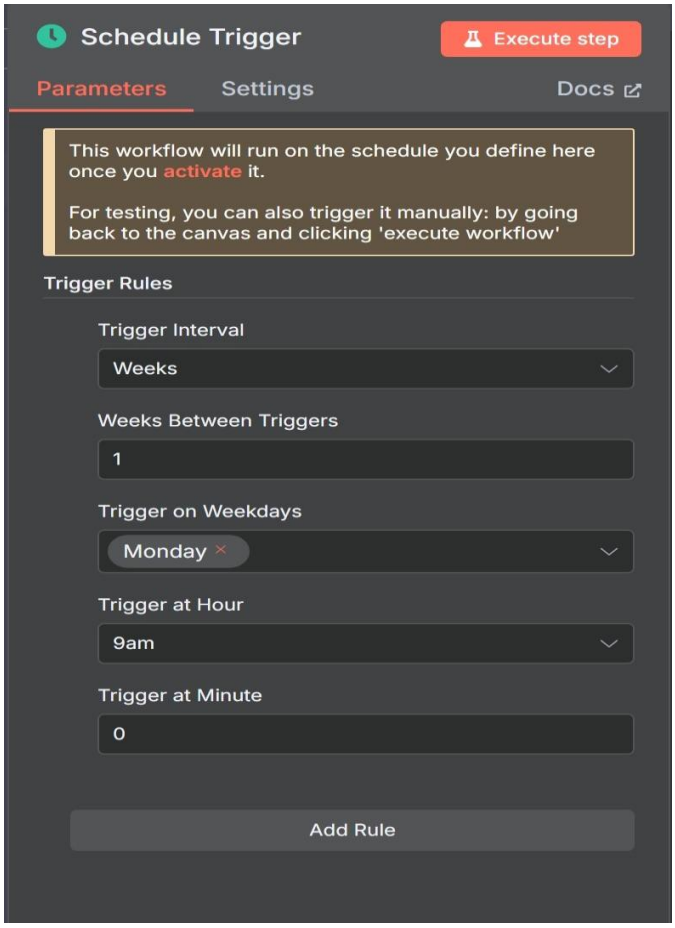

**Schedule your n8n workflow to run automatically every morning at 8 AM and deliver the latest Google Ads performance summary to your email.

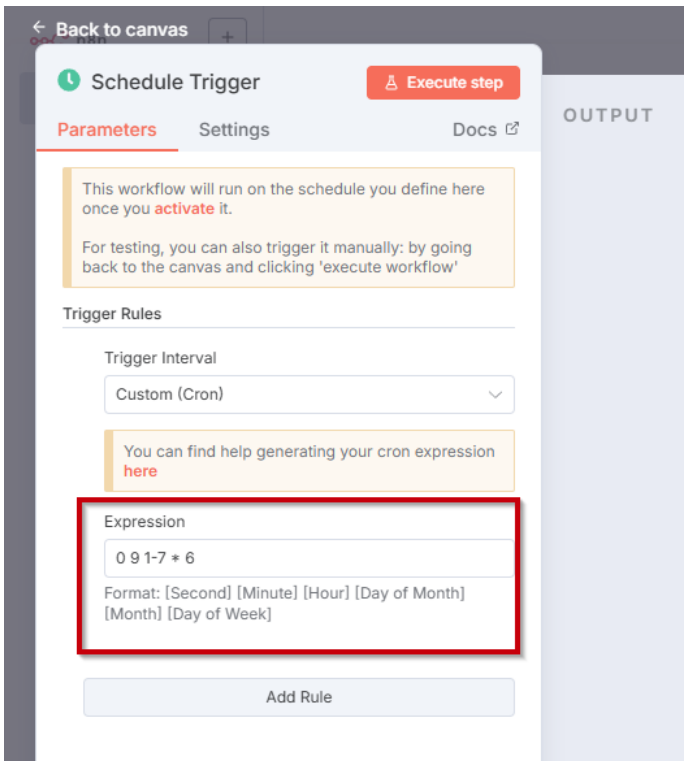

Hint: Use the Cron node in n8n to set the schedule.**

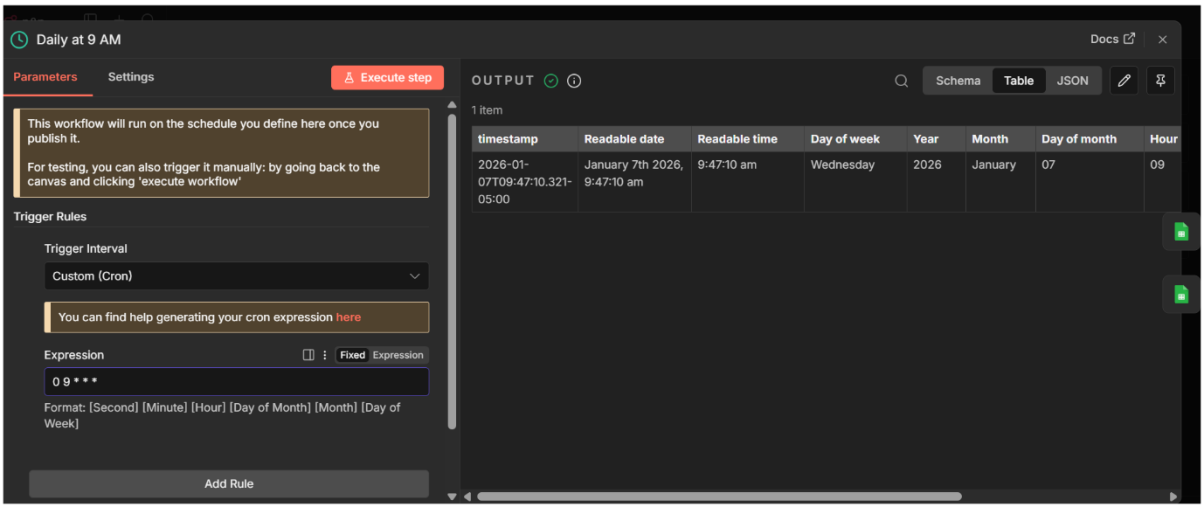

Ans:

The Cron node has been replaced by the **Schedule Trigger** node.

1. Replace the Manual Trigger with **Schedule Trigger**.
2. Choose **Custom (Cron)** and enter 0 8 * * *.
3. Open **Workflow Settings** and set the timezone to **Asia/Kolkata**, otherwise 8 AM runs in the server's timezone.
4. Toggle the workflow to **Active**. Schedules do not run while it is inactive.

Q-5.

Use ChatGPT to help you write a custom JavaScript function node in n8n that calculates the click-through rate (CTR) for each campaign from your Google Ads data, and include this metric in your email report.

Ans:

```
const rows = $input.all().flatMap(i => i.json.results || []);

const byCampaign = {};

for (const r of rows) {
  const name = r.campaign.name;
  const m = r.metrics;
  byCampaign[name] ??= { impressions: 0, clicks: 0, cost: 0 };
  byCampaign[name].impressions += Number(m.impressions || 0);
  byCampaign[name].clicks += Number(m.clicks || 0);
  byCampaign[name].cost += Number(m.costMicros || 0) / 1e6;
}

const body = Object.entries(byCampaign).map(([name, d]) => {
  const ctr = d.impressions ? (d.clicks / d.impressions * 100).toFixed(2) : '0.00';
return
`<tr><td>${name}</td><td>${d.impressions}</td><td>${d.clicks}</td><td>${d.cost.toFixed(2)}</td><td>${ctr}%</td></tr>`;

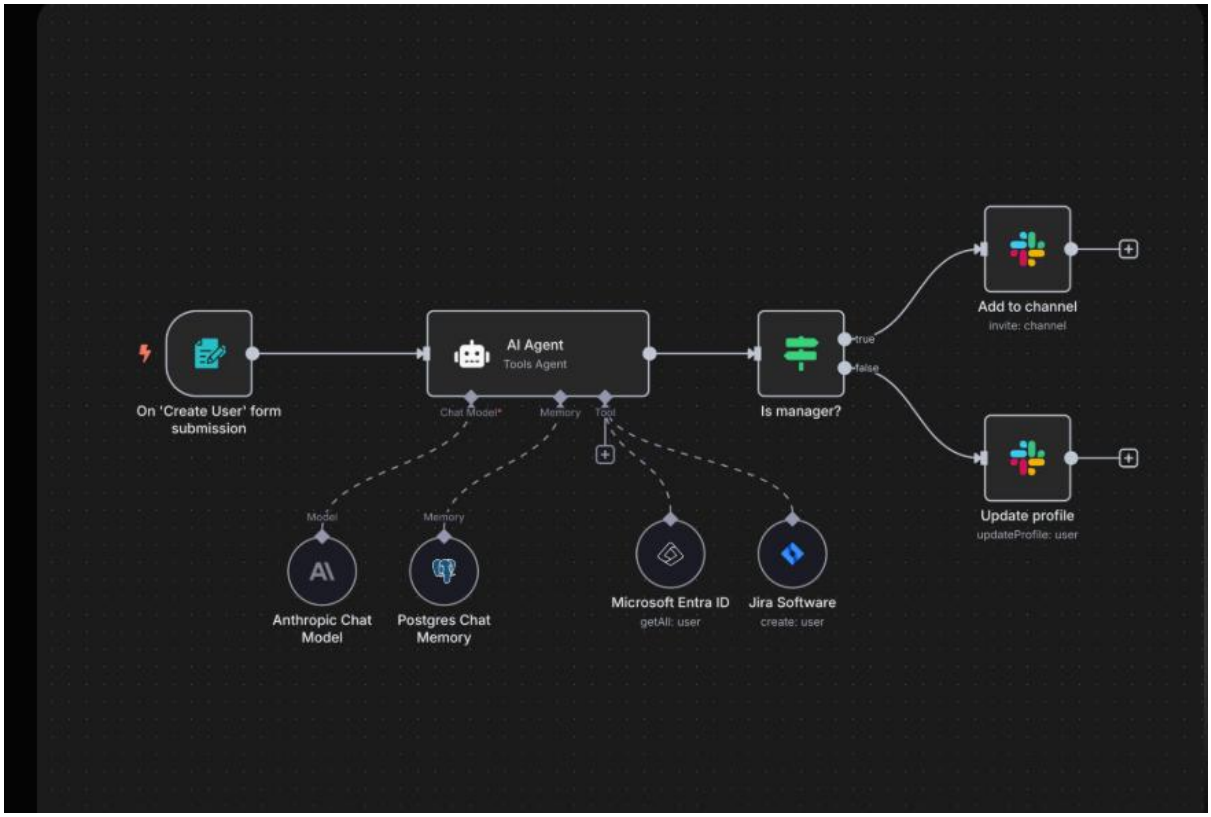

}).join('');
```

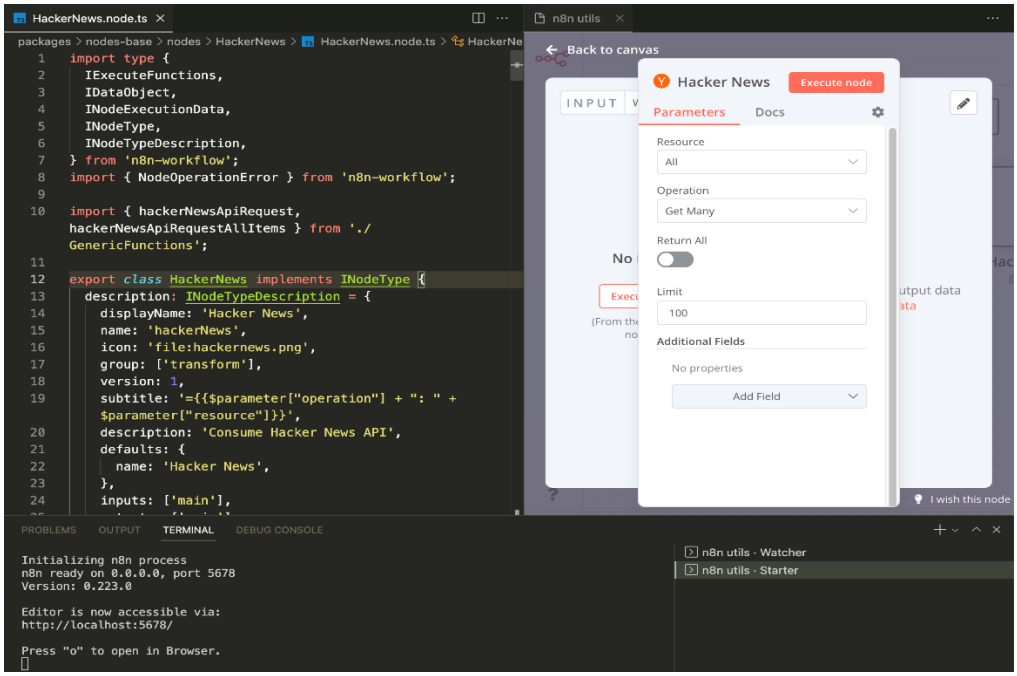

const html = `<table border="1" cellpadding="6" style="border-collapse:collapse">

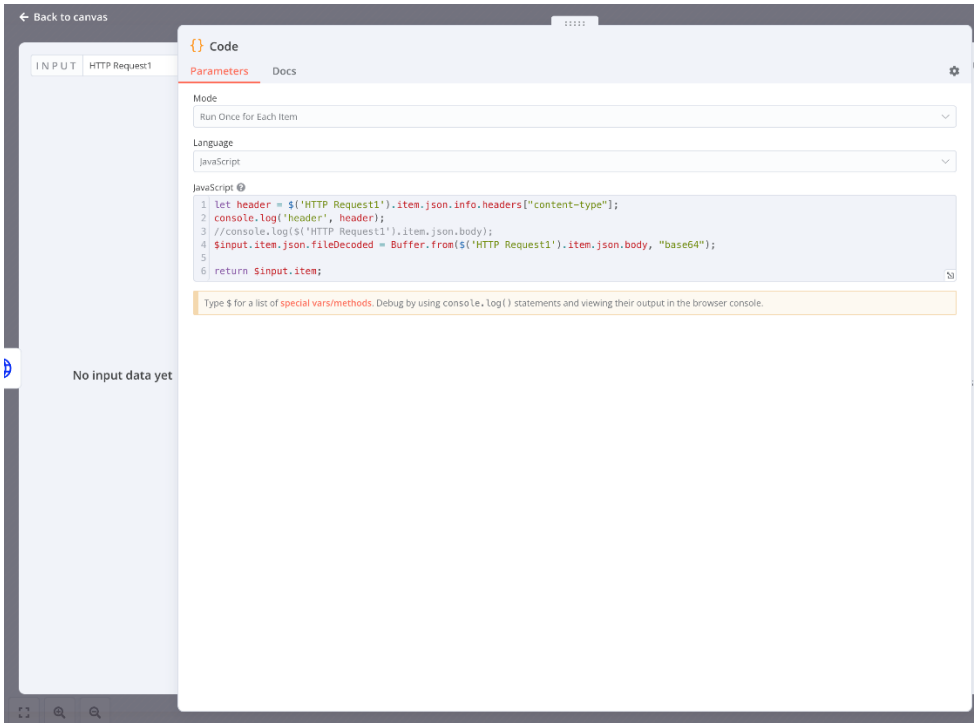

<tr><th>Campaign</th><th>Impressions</th><th>Clicks</th><th>Cost</th><th>CTR</th></tr>

${body}</table>`;

return [{ json: { html } }];
