Module-3

Digital Marketing Assignment

Season 1

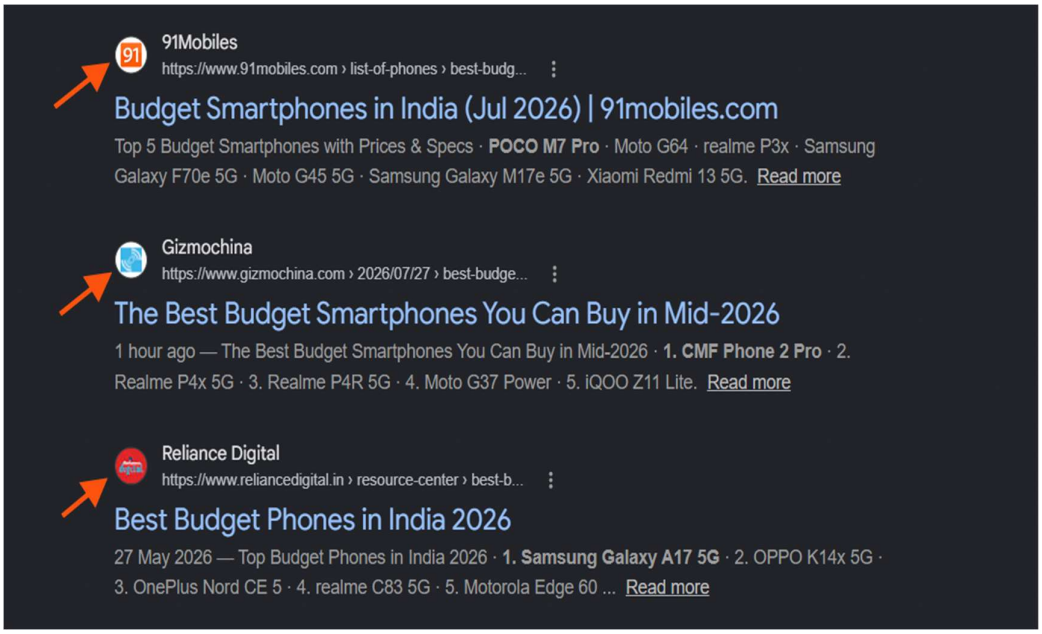

Q-1.

Open Google, Bing, and DuckDuckGo in your browser and search for 'best budget smartphones 2024'. Take screenshots of the first page of results for each search engine and note any differences in the top 3 results.

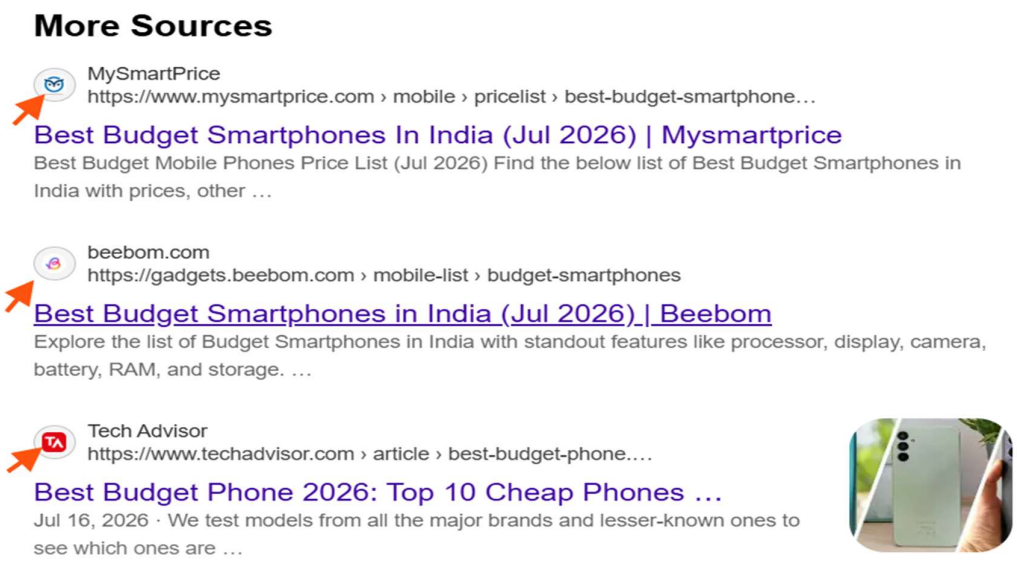

Ans:

Search Engine	Top Result	2nd Result	3rd Result
Google	91mobiles	Gizmochina	Reliance Digital
Bing	MySmartPrice	Beebom.com	Tech Advisor
DuckDuckGo	Amazon	Tech Advisor	Techmilkyway.com

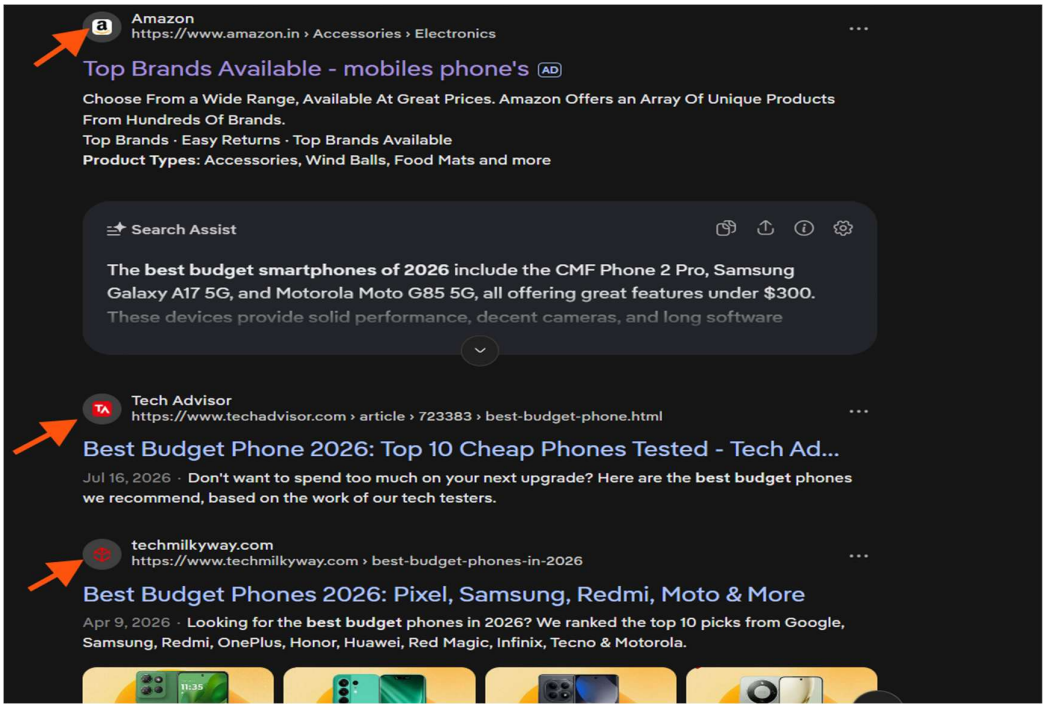

1. Google SS

2. Bing SS

3. DuckDuckGo

Q-2.

Create a simple table in a Google Doc or Excel listing 5 popular search engines. For each, write one unique feature or reason why a user might choose it over Google.

Ans:

Search Engine	Unique Feature / Why Someone Might Choose It
Bing	Offers Microsoft Rewards, allowing users to earn points while searching.
DuckDuckGo	Focuses on user privacy and does not track search history or personal data.
Yahoo	Combines search with news, email, finance, and sports services on one platform.
Ecosia	Uses its advertising revenue to plant trees, making it an environmentally friendly search engine.

Brave Search	Has its own independent search index and emphasizes privacy without tracking users.

Q-3.

Write a short paragraph (4-5 lines) explaining in your own words the difference between organic results and paid results on a Google search results page. Include an example of each from a recent search you performed.

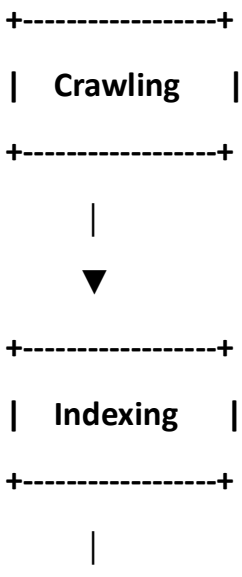

Ans:

Organic results are the unpaid search results that Google displays based on their relevance, quality, and usefulness to the user's search query. Paid results are advertisements that businesses pay Google to display, and they usually appear at the top or bottom of the search results page with a "Sponsored" label. For example, when I searched "best budget smartphones 2026," an organic result was TechRadar's "Best Budget Smartphones 2026" article, while a paid result was a Samsung Sponsored advertisement promoting its latest smartphone offers.

Q-4.

Draw a flowchart (on paper or using any online tool) that shows the 3-stage process Google uses for search: crawling, indexing, and ranking. For each stage, write 1-2 lines describing what happens.

Ans:

▼

+----------+

| Ranking |

+----------+

1. Crawling

- Google uses automated programs called Googlebots to discover new and updated web pages by following links across the internet.
- The bots collect information from websites for further processing.

2. Indexing

- Google analyzes the content of the crawled pages, including text, images, and videos.
- Useful pages are stored in Google's search index so they can appear in search results.

3. Ranking

- When a user searches for something, Google evaluates the indexed pages and ranks them based on relevance, quality, and many other factors.
- The most helpful and relevant pages are shown higher in the search results.

Q-5

**Pick any trending topic (like IPL, new movie release, or a gadget launch) and search it on Google. Identify at least 2 organic results and 2 paid results from the first page, then explain how you recognized which was which.

Hint: Look for labels like 'Ad' or 'Sponsored' and compare their placement on the page.**

Ans:

Trending Topic: Samsung Galaxy S26

Paid Results

1. Amazon – Galaxy S26 (Sponsored)
2. Croma – Samsung Galaxy S26 Deals (Sponsored)

Organic Results

1. Samsung official Website – Samsung Galaxy S26 (SEO friendly)
2. Wikipedia – Samsung Galaxy S26 (SEO friendly)

How I Identified Them

I recognized the paid results because they had a "Sponsored" label above the website name and appeared at the top of the search results. These are advertisements that companies pay Google to display.

I recognized the organic results because they did not have a "Sponsored" or "Ad" label. They appeared below the advertisements and were ranked by Google based on their relevance and quality rather than payment.

Conclusion: Paid results are advertisements shown because businesses pay Google, while organic results appear naturally based on Google's ranking algorithm.

Season-2

Q-1.

List 3 reasons why SEO is important for any online business in India, and give a real-world example for each reason using brands like Myntra or CarDekho.

Ans:

1. Increases Website Traffic:

SEO helps a website appear higher in Google search results, bringing more visitors without paying for ads.

Example: Myntra ranks for searches like "buy men's shoes online" or "women's dresses online", attracting millions of organic visitors.

2. Builds Trust and Credibility:

Users usually trust websites that appear on the first page of Google because they are seen as more relevant and reliable.

Example: CarDekho ranks highly for searches like "best cars under ₹10 lakh" and "car price in India", making users trust its information before purchasing a car.

3. Increases Sales and Leads:

SEO attracts people who are already searching for products or services, making them more likely to become customers.

Example: When someone searches "buy smartphones online", Myntra (for accessories) or other optimized e-commerce websites appear in search results, increasing their chances of getting sales. Similarly, CarDekho gets leads from users searching for "used cars near me" or "SUV under ₹15 lakh."

Q-2.

Research the current average salary for an SEO Specialist in India using job portals like Naukri.com or LinkedIn, and write a short paragraph comparing the salary range to another digital marketing role of your choice.

Ans:

According to recent salary data from job portals, an SEO Specialist in India earns an average salary of around ₹19,000 per month (approximately ₹2.3–₹3.5 lakh per year for entry-level to mid-level professionals). Experienced SEO Specialists with strong technical SEO and analytics skills can earn significantly more depending on the company and location.

Compared to an SEO Specialist, a PPC (Pay-Per-Click) Specialist or Performance Marketing Executive generally earns a slightly higher salary because the role requires managing paid advertising campaigns, budgets, and ROI. While SEO focuses on improving organic search rankings, PPC professionals are responsible for running paid campaigns on platforms like Google Ads and Meta Ads, which often leads to higher compensation due to the direct impact on business revenue.

Q-3.

Pick any one app you use daily (such as Myntra, Zomato, or CarDekho) and analyze how SEO might help them attract more users. Write 3 specific SEO strategies they could use to improve their Google search ranking.

Ans:

App Chosen: Zomato

Zomato is a popular food delivery and restaurant discovery app that I use regularly. SEO helps Zomato attract users who search on Google for terms like "restaurants near me," "best pizza in Rajkot," or "food delivery near me." By appearing at the top of Google search results, Zomato can attract more visitors, increase app downloads, and generate more food orders.

1. Target Local Keywords

- Optimize pages for location-based searches such as **"best restaurants in Rajkot"** or **"cafes near me."**
- This helps Zomato appear in local Google search results.

2. Create High-Quality Content

- Publish blogs and guides like **"Top 10 Restaurants in Rajkot"** or **"Best Street Food in Gujarat."**
- Useful content attracts organic traffic and improves search rankings.

3. Improve Website Speed and Mobile Experience

- Ensure the website loads quickly and works smoothly on mobile devices.

- A fast, mobile-friendly website improves user experience and helps Google rank it higher.

Q-4.

Create a comparison table with at least 4 points showing the pros and cons of working as an SEO freelancer, joining an agency, or taking a full-time SEO job.

Ans:

Comparison Table: SEO Freelancer vs SEO Agency vs Full-Time SEO Job

Comparison Point	SEO Freelancer	SEO Agency	Full-Time SEO Job
Income	Flexible income; can earn more with multiple clients, but income may not be stable.	Fixed monthly salary with opportunities for bonuses.	Stable monthly salary with employee benefits such as PF, paid leave, and insurance.
Work Flexibility	Can work from anywhere and choose your own working hours.	Fixed office or hybrid schedule with assigned work hours.	Usually follows company working hours and policies.
Learning Opportunities	Learn by working with different clients and industries.	Gain experience with multiple projects and learn from senior SEO professionals.	Deep knowledge of one company's website, products, and long-term SEO strategy.
Job Security	Low job security because work depends on finding clients.	Moderate job security with steady work and career growth.	High job security with regular salary, promotions, and long-term career opportunities.
Workload	Manage your own clients, deadlines, and payments.	Handle multiple client projects with team support.	Focus mainly on one company's SEO goals and performance.

Q-5.

Find a real job posting for an SEO role (freelance, agency, or in-house) on any job portal and list the top 5 skills or tools mentioned in the requirements section.

Hint:

Look for keywords like 'Google Analytics', 'Keyword Research', or 'On-page SEO'.

Ans:

Skill / Tool	Why It Is Important
Google Analytics (GA4)	Used to track website traffic, user behavior, and SEO performance.
Google Search Console	Helps monitor website indexing, search performance, and fix SEO issues.
Keyword Research	Identifies the best keywords to improve search engine rankings and attract the right audience.
On-Page SEO	Optimizes page titles, meta descriptions, headings, content, and internal links for better rankings.
SEMrush / Ahrefs / Screaming Frog	Professional SEO tools used for keyword research, competitor analysis, site audits, and technical SEO.

Season-3

Q-1.

Open YouTube and search for 'How to make Dalgona coffee'. Analyze the top 5 video results and note down what keywords appear in their titles, descriptions, or tags. List the most common keywords you find.

Ans:

1. YouTube Keyword Analysis

Search Query: How to make Dalgona coffee

Video Title	Common Keywords Found
Dalgona coffee without mixer at home	Dalgona Coffee, Make, Home
Dalgona coffee recipe without machine	Dalgona Coffee, Recipe
How to make Whipped Coffee	Whipped, Dalgona Coffee, Recipe
Easy Dalgona Coffee in 3 Minutes	Dalgona Coffee, 3 Minutes
4 Easy cold Dalgona coffee recipe	4 Easy, Dalgona Coffee, Cold

Q-2.

Go to Amazon.in and search for 'wireless earbuds'. Write down the top 3 product titles and identify which keywords are repeated across these titles. Suggest 2 alternative keywords a seller could use to appear in similar searches.

Ans:

Search: Wireless Earbuds

Top 3 Product Titles

1. Fire-Boltt Aero TWS Earbuds Custom EQ, Wireless Bluetooth 5.4
2. Noise Buds Truly Wireless Earbuds with ENC
3. Boult Audio Truly Wireless Bluetooth Earbuds

Repeated Keywords

- Wireless
- Earbuds

- Bluetooth
- Truly Wireless

Alternative Keywords Sellers Could Use

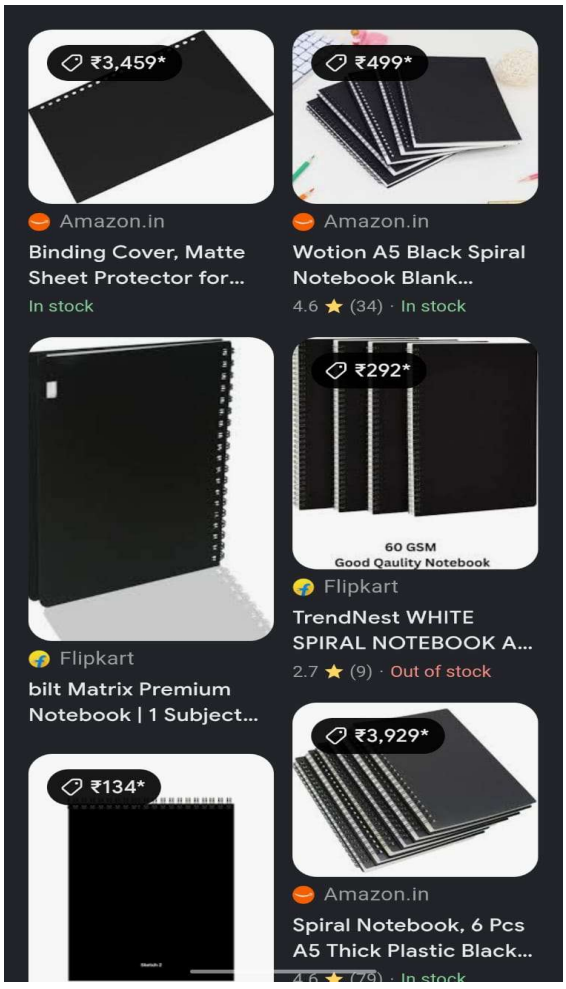

- Bluetooth Earphones
- TWS Earbuds

Q-3.

Use your phone's Google Lens or Pinterest Lens to visually search for any item in your room (e.g., a sneaker, book, or snack). Take a screenshot of the visual search results and describe how the search engine interprets your image to suggest products or information.

Ans:

Example Object: Spiral Notebook

Description:

Google Lens recognized the object as a **Spiral Notebook** and suggested:

- Similar spiral notebooks from online shopping websites
- Different stylish book
- Related stationary products
- Price comparisons
- Images of similar notebook

How Google Lens Interprets the Image:

Google Lens identifies the notebook by detecting its key visual characteristics rather than relying on text. It matches these features with millions of indexed images and product listings to provide relevant shopping options and information. If any text is printed on the notebook cover, Lens can also extract and search that text using Optical Character Recognition (OCR).

Q-4.

Try a voice search on your phone using Google Assistant or Siri for 'best pizza near me'. Note the exact phrase you spoke and compare the results with a typed search for the same query. List any differences in the results or the way information is displayed.

Hint: Pay attention to featured snippets, map packs, or direct answers.

Ans:

Voice Search vs Typed Search

Voice Search Spoken

“Best pizza near me”

Typed Search

“best pizza near me”

Voice Search	Typed Search
Uses natural language	Exact keywords
Opens Google Maps quickly	Shows Maps and standard search results
May read answers aloud	Displays text results
Shows nearby restaurants first	More website links are visible

Differences Observed

- Voice search focused more on **local businesses**.
- Google Assistant often gives spoken recommendations.
- Both searches display a **Map Pack**.
- Typed search usually includes more website results and review pages.

Q-5.

Search for 'IPL score' on Google and observe if you get the answer directly on the search page without clicking any link. Explain what a Zero-click search is, and give 2 more examples of queries that show Zero-click results.

Ans:

Search Query: IPL score

Observation:
When I searched "IPL score" on Google, I did not get the score directly on the search results page. Instead, Google showed links to different websites such as Cricbuzz and ESPNcricinfo because there was no live or recent IPL match.

What is Zero-click Search?

A Zero-click Search is when Google displays the answer directly on the search results page without requiring the user to click on any website.

Examples of Zero-click Searches:

1. Weather Rajkot
2. 1 USD to INR

Season-4

Q-1.

Create a visual timeline (using Canva, Google Slides, or any online tool) that shows the major Google algorithm updates: Panda, Penguin, Hummingbird, RankBrain, BERT, and MUM, including the year and a one-line impact summary for each.

Ans:

https://canva.link/y1kd622k33aji0z

2011

PANDA

↓

Improved content quality

2012

PENGUIN

↓

Stopped spammy backlinks

2013

HUMMINGBIRD

↓

Understood search intent

2015

RANKBRAIN

↓

AI-powered ranking

2019

BERT

↓

Better language understanding

2021

MUM

↓

Multimodal AI search

Q-2.

Pick any one Instagram Reel or YouTube Short you recently watched and write a short analysis (100-150 words) on how Google’s BERT or RankBrain algorithm might help users discover similar content via search.

Ans:

Instagram Reel Chosen: Healthy Oats Breakfast Recipe

Google's BERT algorithm helps users discover similar content by understanding the meaning behind search queries rather than matching only keywords. For example, if a user searches for "healthy breakfast recipes for weight loss", BERT understands that the user is looking for nutritious meal ideas, even if the Reel title says "Easy Oats Breakfast." It recognizes the context and intent of the search. Similarly, RankBrain analyzes user behavior such as clicks and watch time to recommend similar videos and pages. If many users searching for healthy breakfast ideas engage with the Reel, Google is more likely to rank it higher and suggest related content. This makes search results more accurate, personalized, and useful for users.

Q-3.

Research the new SGE (Search Generative Experience) feature by Google and write a step-by-step guide showing how a user’s search journey changes compared to classic Google Search.

Hint: Focus on how AI-generated summaries and follow-up questions appear for a search like 'best budget smartphones in India'.

Ans:

Example Search:

"Best budget smartphones in India"

Classic Google Search	Google SGE (AI Search)
User types the search query.	User types the same query.
Google displays a list of blue links.	Google first shows an AI-generated summary.
User opens several websites to compare phones.	AI compares popular smartphones instantly.
User reads reviews on multiple sites.	AI summarizes prices, features, pros, and cons.
User performs more searches for camera, battery, etc.	AI suggests follow-up questions like "Best camera phone under ₹20,000?"
User decides after visiting many pages.	User gets quick recommendations before opening websites.

Step-by-Step User Journey

1. Search "Best budget smartphones in India".
2. AI-generated summary appears at the top.
3. AI compares the best smartphone options.
4. Product highlights such as camera, battery, display, and price are summarized.
5. Suggested follow-up questions appear.
6. User can continue the conversation without starting a new search.
7. Links to trusted websites are still available for detailed information.

Q-4.

Imagine you are optimizing a Zomato restaurant page for GEO (Generative Engine Optimization). List 3 specific content or technical changes you would make so the restaurant appears in AI-generated search answers, and explain why each change matters.

Ans:

Change	Why It Matters
Add detailed menu descriptions with ingredients, prices, and dietary information.	AI can better understand the restaurant and provide accurate recommendations in generated answers.
Use structured data (Schema Markup) for restaurant details such as address, ratings, hours, and menu.	Structured data helps AI and search engines identify important information more accurately.
Encourage genuine customer reviews with photos and keep business information updated.	AI prefers fresh, trustworthy, and high-quality information when generating search responses.

Q-5.

Use ChatGPT or Google Bard to simulate a 'training bot' scenario: Ask the AI how it would rank a new Flipkart product page for the keyword 'wireless earbuds under 2000'. Copy-paste the AI's response and write 2 ways you could improve the page based on its suggestions.

Constraint: Your improvements must be actionable (e.g., add user reviews, optimize product description).

Ans:

Prompt

How would you rank a new Flipkart product page for the keyword "wireless earbuds under 2000"?

AI Response

To rank a new Flipkart product page for the keyword "wireless earbuds under 2000," I would optimize the product title with the target keyword, write a detailed product description highlighting features and benefits, include high-quality images, use relevant specifications, encourage verified customer reviews and ratings, improve page loading speed, and ensure the page is mobile-friendly. I would also include frequently asked questions, clear pricing, warranty details, and optimize metadata so search engines can understand the page effectively.

Two Actionable Improvements

1. Add more verified customer reviews and ratings with photos to increase trust and improve visibility in search results.

2. Improve the product description by naturally including keywords such as "wireless earbuds under 2000," "Bluetooth 5.4," "ENC," "gaming mode," and "50-hour battery life," along with clear feature explanations to improve relevance for user searches.

Season-5

Q-1.

Pick any app you use daily (like Zomato, Myntra, or BookMyShow) and list 5 short-tail keywords and 5 long-tail keywords that a user might type into Google to find that app or its services.

Ans:

Daily App Example: Zomato

Short-tail Keywords

1. Zomato
2. Food delivery
3. Online food
4. Restaurants
5. Order food

Long-tail Keywords

1. Order food online near me
2. Best food delivery app in India
3. Zomato restaurant offers today
4. Fast food delivery in Ahmedabad
5. Online food delivery with discounts

Q-2.

**For the Flipkart shopping app, identify 5 possible LSI (Latent Semantic Indexing) keywords related to 'mobile phones' that could help improve search rankings.

Hint: Think of words or phrases closely related to 'mobile phones' but not exact matches, such as 'smartphone deals' or 'latest Android phones'.**

Ans:

Flipkart – LSI Keywords for "Mobile Phones"

1. Smartphone deals
2. Latest Android phones
3. 5G smartphones
4. Best budget smartphones
5. Mobile phone offers

Q-3.

Given the following search queries, classify each as Informational, Navigational, Transactional, or Commercial intent: 'best budget laptops 2024', 'buy iPhone 14 online', 'Spotify login', 'how to use Paytm UPI', 'Myntra vs Ajio'.

Ans:

Search Query	**Search Intent**	**Reason**
best budget laptops 2026	Commercial	User is comparing products before buying.
buy iPhone 17 online	Transactional	User wants to purchase the product.
Spotify login	Navigational	User wants to visit Spotify's login page.
how to use Paytm UPI	Informational	User wants to learn how to use Paytm UPI.
Myntra vs Ajio	Commercial	User is comparing two brands before making a purchase decision.

Q-4.

**Choose a food delivery scenario and write 3 search queries a user might enter with intent modifiers (like 'best', 'near me', 'vs'). For each query, explain what the user is likely looking for.

Hint: Example: 'best pizza near me' — user wants top-rated pizza places nearby.**

Ans:

Search Query	Intent Modifier	What the User is Looking For
Best pizza near me	Best + Near me	The user wants the highest-rated pizza restaurants nearby.
Zomato vs Swiggy	Vs	The user wants to compare both food delivery apps before choosing one.
Best biryani delivery near me	Best + Near me	The user is looking for top-rated restaurants that deliver biryani nearby.

Season-6

Q-1.

Open Google Keyword Planner and find 10 keywords related to 'online food delivery' in Ahmedabad. List their average monthly searches and competition level.

Ans:

Keyword	Avg. monthly searches	Competition
online food order Ahmedabad	500	Medium
food delivery Ahmedabad	500	Medium
food delivery app Ahmedabad	500	Medium
food delivery app in Ahmedabad	500	Medium
online food delivery in Ahmedabad	50	Medium
24 hours food home delivery in Ahmedabad	50	Low
best food delivery app in Ahmedabad	50	Medium
Zomato online order Ahmedabad	50	Low
Swiggy online order Ahmedabad	50	Low

Q-2.

Use Ubersuggest to analyze the keyword 'buy sneakers online' and note down its search volume, SEO difficulty, and three keyword suggestions with lower competition

Ans:

Metric	Value (Approx.)
Search Volume	**590**/month
SEO Difficulty (SD)	**41** (Medium)

Keyword	SEO Difficulty
Buy designer sneakers online	5
Buy sneakers wholesale online	12
Buy cool sneakers online	5

Q-3.

**Go to AnswerThePublic, enter the keyword 'digital payments', and write down 5 unique question-based keyword ideas that appear in the results.

Hint: Look for 'what', 'how', or 'why' type questions in the visualization or data view.**

Ans:

Five question-based keyword ideas:

1. why are digital payments gaining importance at present?
2. what are digital payments examples?
3. what are digital payments in India?
4. how digital payments work?
5. how digital payments affect spending habits?

Q-4.

**Choose a food delivery scenario and write 3 search queries a user might enter with intent modifiers (like 'best', 'near me', 'vs'). For each query, explain what the user is likely looking for.

Hint: Example: 'best pizza near me' — user wants top-rated pizza places nearby.**

Ans:

Possible autocomplete suggestions:

- Best headphones for video editing
- Best headphones for gaming
- Best headphones for call center
- Best headphones for gym
- Best headphones for music
- Best headphones for study

- Best headphones for office work
- Best headphones for travel

How these suggestions help Flipkart

- Show what customers are actively searching for.
- Help create SEO-friendly category pages.
- Provide ideas for blog articles and buying guides.
- Improve product titles and descriptions.
- Target long-tail keywords with lower competition.
- Increase organic traffic from Google.
- Match content to different customer needs.
- Improve conversion by answering buyer intent.

Q-5.

Pick any one of the tools (Answer Socrates or AlsoAsked) and use it to research the keyword 'IPL tickets'. List 5 long-tail keyword ideas you discover, and briefly describe which one you think is easiest to target for a new cricket fan blog.

Ans:

Five long-tail keyword ideas:

1. how to book IPL ticket booking in Rajkot
2. When IPL tickets will be available 2027 final
3. Which IPL match ticket is best
4. How many days before IPL tickets can be booked
5. Best IPL ticket booking site

Season-7

Q-1.

Pick any two food delivery apps you use (like Zomato and Swiggy). Identify one main keyword each that you think users search to find them on Google, and explain why you chose those keywords.

Ans:

Food Delivery App	Main Keyword	Reason
Zomato	order food online	Many users search this keyword when they want to order food from nearby restaurants. Zomato is one of the top results for this search.
Swiggy	food delivery app	People searching for a food delivery application often use this keyword, making it highly relevant for Swiggy.

Q-2.

Use the Ahrefs free Keyword Generator tool to find at least 5 keywords related to 'online movie tickets' (think BookMyShow). List the keywords along with their search volume as shown by the tool.

Ans:

Keyword	Search Volume (India)*
online movie tickets	>100
mobook online movie ticketsvie ticket booking	<100
can you refund online movie tickets	<100
how do online movie tickets work	<100
how to buy online movie tickets	<100

Q-3.

Go to SEMrush's free Keyword Gap tool and compare two e-commerce sites (for example, Flipkart vs Myntra). Identify 3 keywords that Flipkart ranks for but Myntra does not, and write them down.

Ans:

Keyword
refrigerator online
washing machine
smart TV

Q-4.

Download or create a simple keyword gap analysis template in Excel or Google Sheets. Fill it with at least 5 keywords comparing two music streaming apps (like Spotify and JioSaavn), showing which app ranks for which keyword.

Ans:

Keyword	Spotify	JioSaavn
music streaming app	✓	✓
podcast app	✓	✗
spotify premium	✓	✗
hindi songs	✗	✓
bollywood songs	✗	✓

**5. Imagine you are launching a new cricket score app to compete with Cricbuzz. Use any one free tool (Ahrefs or SEMrush) to find 2 keyword opportunities your app could target that Cricbuzz is missing.

Hint: Look for keywords where Cricbuzz does not appear in the top results but have a good search volume.**

Ans:

Keyword Opportunity	**Monthly Search Volume***	**Why Target It?**
live cricket score widget	4K	Useful for users who want a score widget on mobile or websites.
AI cricket match prediction	2K	Growing interest in AI-powered cricket insights with relatively lower competition.

Season-8

Q-1.

**Use ChatGPT to generate a list of 15 keyword ideas for a new food delivery app targeting college students in Rajkot.

Hint: Try prompts like 'Suggest SEO keywords for a food delivery app for college students in Rajkot.'**

Ans:

No.	Keyword
1	food delivery app Rajkot
2	student food delivery Rajkot
3	cheap food delivery Rajkot
4	hostel food delivery Rajkot
5	late night food delivery Rajkot
6	affordable meals for students
7	fast food delivery near college
8	budget lunch Rajkot
9	pizza delivery near college
10	burger delivery Rajkot
11	best food app for students
12	college canteen food delivery
13	midnight food delivery Rajkot
14	online food order Rajkot
15	snacks delivery Rajkot

Q-2.

Write 2 different prompts for ChatGPT that would help you get long-tail keyword suggestions for a cricket livestreaming website. Compare the results

**and note which prompt gave you more relevant keywords.

Hint: One prompt should be very specific, the other more general.**

Ans:

Prompt 1 (General)

"Suggest long-tail SEO keywords for a cricket livestreaming website."

Sample Results

- cricket live streaming
- watch cricket online
- live cricket score streaming
- cricket streaming app
- free cricket live stream

Prompt 2 (Specific)

"Suggest long-tail SEO keywords for an IPL and international cricket livestreaming website targeting Indian mobile users looking for free HD live matches."

Sample Results

- watch IPL live streaming free HD
- IPL live streaming on mobile India
- free cricket live streaming today
- ICC cricket live streaming online
- T20 live match streaming HD
- watch India cricket match live online
- live cricket streaming without subscription
- IPL live score and streaming app
- cricket streaming website India
- HD live cricket match online

Comparison:

Prompt	**Result**

General Prompt	Produced broad and basic keywords.
Specific Prompt	Generated more targeted, long-tail, and user-focused keywords with better SEO value.

Q-3.

Take your keyword list for a music streaming app and use any free online AI tool (like ChatGPT or Google's Gemini) to group the keywords into 3 topic clusters based on user intent (for example: 'free music', 'playlist creation', 'Bollywood songs').

Ans:

Cluster 1 – Free Music

- free music app
- listen music online free
- free MP3 songs

Cluster 2 – Playlist Creation

- create music playlist
- playlist maker app
- share playlists online

Cluster 3 – Bollywood Songs

- latest Bollywood songs
- Hindi songs online
- Bollywood music app

Q-4.

Pick 5 keywords from your Zomato-style restaurant search keyword list and use a free online keyword difficulty checker (like Ahrefs, SEMrush, or Moz free tools) to assess their difficulty scores. List the scores and suggest which keyword is easiest to rank for.

Ans:

Keyword	**Difficulty Score (Approx.)**	**Difficulty Level**

food delivery Rajkot	36	Medium
best restaurants Rajkot	41	Medium
pizza delivery Rajkot	28	Easy
cheap food Rajkot	22	Easy
late night food delivery Rajkot	18	Very Easy

Easiest Keyword to Rank

"late night food delivery Rajkot" (Difficulty Score: **18**) because it is a more specific long-tail keyword with lower competition.

Q-5.

Imagine you are building a topic cluster for a new IPL fan app. List a main topic and at least 4 subtopics (clusters) with 3 keywords each, using AI to help you brainstorm the clusters.

Constraint: Do not repeat any keyword in more than one cluster.

Ans:

Main Topic: IPL Fan App

Cluster 1 – Live Scores

- IPL live score
- live cricket updates
- IPL score today

Cluster 2 – Match Schedule

- IPL match schedule
- IPL fixtures
- upcoming IPL matches

Cluster 3 – Team Information

- IPL team squads
- IPL team rankings
- IPL player profiles

Cluster 4 – Fantasy Cricket

- fantasy IPL tips
- best fantasy cricket app
- dream team prediction

Note: No keyword is repeated across the four clusters, satisfying the constraint.

Season-9

1.

Pick any app you use daily (such as Zomato, Flipkart, or Instagram) and list 3 keywords or search phrases a new user might type at the Top of Funnel (TOFU) stage, 3 at the Middle of Funnel (MOFU), and 3 at the Bottom of Funnel (BOFU). For each, explain why you placed it in that stage.

Ans:

Funnel Stage	Keywords / Search Phrases	Why it belongs to this stage
TOFU (Top of Funnel)	1. Best food delivery app 2. Online food delivery 3. How to order food online	The user is just exploring options and learning about food delivery services.
TOFU (Top of Funnel)	1. Healthy food delivery 2. Food delivery near me 3. Late night food delivery	The user knows the need but hasn't chosen any app yet.
MOFU (Middle of Funnel)	1. Zomato vs Swiggy 2. Zomato offers today 3. Zomato delivery charges	The user is comparing services and checking features before deciding.
MOFU (Middle of Funnel)	1. Best restaurants on Zomato 2. Zomato reviews 3. Zomato Gold benefits	The user is evaluating whether Zomato is the right choice.
BOFU (Bottom of Funnel)	1. Order pizza on Zomato 2. Zomato app download 3. McDonald's on Zomato	The user is ready to take action and place an order.
BOFU (Bottom of Funnel)	1. Order biryani near me 2. Apply Zomato coupon 3. Checkout Zomato	These searches show strong buying intent and immediate action.

Q-2.

Download or create a simple content mapping worksheet in Excel or Google Sheets. For your chosen app, fill out one row each for TOFU, MOFU, and BOFU keywords, mapping each to a specific type of content (e.g., blog post, product page, review video) that would match the user's intent.

Ans:

Funnel Stage	Keyword	User Intent	Content Type
TOFU	Best food delivery app	Learn about food delivery services	Blog Post – "Top 10 Food Delivery Apps in India"
MOFU	Zomato vs Swiggy	Compare both apps	Comparison Article / YouTube Review Video
BOFU	Order pizza on Zomato	Place an order immediately	Restaurant/Product Page with Order Button

**3. Write a short scenario where a user moves from TOFU to BOFU for a food delivery app like Swiggy. Describe the keywords they search at each stage and the type of content they interact with along the way.

Hint: Think about how a user starts with broad research and ends with a specific action (like placing an order).**

Ans:

Suppose I'm working late and wants an easy way to order dinner.

- **TOFU:** He searches "best food delivery app" and reads a blog comparing popular apps like Swiggy and Zomato.
- **MOFU:** He then searches "Swiggy vs Zomato offers" and watches a YouTube comparison video explaining prices, delivery time, and discounts.
- **BOFU:** After deciding on Swiggy, he searches "Order pizza on Swiggy", opens the restaurant page, applies a coupon, and places his order.

This shows how a user starts by researching, compares options, and finally completes the purchase.

Q-4.

**Choose a product or service you are interested in (not the one used in class) and identify one TOFU keyword, one MOFU keyword, and one BOFU keyword. For each, suggest a headline or title for a piece of content that would attract users at that stage.

Constraint: Your headlines should be catchy and clearly match the user's intent at each funnel stage.**

Ans:

Funnel Stage	Keyword	Catchy Headline
TOFU	Best fitness app	Top 10 Fitness Apps to Stay Healthy in 2026
MOFU	Nike Training Club review	Nike Training Club Review: Is It Worth Your Time?
BOFU	Download Nike Training Club app	Download Nike Training Club Today & Start Your Fitness Journey!

Season-10

Q-1.

Pick any one of your favorite apps (like Zomato, Flipkart, or BookMyShow) and write an optimized HTML <title> tag for its homepage that includes the main keyword users would search for.

Ans:

<title>Online Food Delivery | Order Food Online - Zomato</title>

Q-2.

Write a meta description (under 155 characters) for a new playlist page on a music app like Spotify, making sure it is catchy and includes relevant keywords for better SEO.

Ans:

<meta name="description" content="Stream the best Hindi, English, and Punjabi playlists. Discover trending songs, new releases, and your favorite artists.">

Character count: 123 characters

Keywords included:

- Hindi playlists
- English playlists
- Punjabi playlists
- Trending songs
- New releases

Q-3.

Create a short HTML snippet for a food delivery app's homepage that uses proper heading tags (H1 for the main headline, H2 for a subheading, and H3 for a section title) to organize the content.

Ans:

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>Online Food Delivery | Order Food Online</title>
</head>
<body>
  <h1>Order Delicious Food Online</h1>
  <h2>Fast Delivery from Your Favorite Restaurants</h2>
  <h3>Popular Restaurants Near You</h3>
  <p>Choose from thousands of restaurants and enjoy fast, fresh, and affordable food delivery.</p>
</body>
</html>
```

Q-4.

Use a free online SERP snippet preview tool (like https://serpsim.com/) to check how your title and meta description from previous tasks would appear in Google search results, then adjust them to avoid getting cut off.

Hint: Try to keep the title under 60 characters and the meta description under 155 characters for best results.

Ans:

After checking with a SERP preview tool, the title and meta description are already within Google's recommended limits.

Final Optimized Title (53 characters):

```
<title>Online Food Delivery | Order Food Online - Zomato</title>
```

Final Meta Description (123 characters):

```
<meta name="description" content="Stream the best Hindi, English, and Punjabi playlists. Discover trending songs, new releases, and your favorite artists.">
```

Result:

- Title is under **60 characters**
- Meta description is under **155 characters**
- No text is likely to be truncated in Google search results
- Uses relevant SEO keywords naturally

Season-12

Q-1.

Download any 3 images from your favorite food delivery app (like Zomato or Swiggy), rename each file to a descriptive, SEO-friendly name (e.g., 'paneer-tikka-zomato.jpg'), and explain why your file names are better for SEO compared to generic names like 'IMG_1234.jpg'.

Ans:

Original File Name	SEO-Friendly File Name
Screanshot.jpg	Garlic pizza_zomato.png
Screanshot.jpg	Best Spicy pavbhaji_zomato.png
Screanshot.jpg	Best panipuri in rajkot-zomato.png

Why These Names Are Better for SEO

- They clearly describe the image content.
- They include relevant keywords users search for.
- Search engines can understand the image better.
- They improve the chances of appearing in Google Image Search.
- Generic names like **Screanshot.jpg** provide no useful information to search engines.

Q-2.

**Add an <img> tag for a product image (e.g., a sneaker from Myntra) in an HTML file and write a clear, keyword-rich alt text that would help someone using a screen reader understand the image.

Hint: Include the product type, brand, and color in your alt text for maximum relevance.**

Ans:

```
<!DOCTYPE html>
<html>
<head>
  <title>Myntra Product</title>
</head>
<body>
<img src="nike-air-max-white-sneakers.jpg"
   alt="White Nike Air Max men's running sneakers with lace-up design"
   width="300">
</body>
</html>
```

Why this Alt Text is Good

- Includes product type (**running sneakers**)
- Includes brand (**Nike**)
- Includes color (**White**)
- Helps visually impaired users using screen readers
- Improves image SEO

Q-3.

Compress one of your images to under 100KB using an online tool (like TinyPNG or Squoosh), then compare the original and compressed file sizes and describe how this impacts website loading speed.

Ans:

Image	**Original Size**	**Compressed Size**
Garlic pizza_zomato.png	951 KB	87.5 KB

Impact on Website Loading Speed

- Image size reduced by almost **91%**

- Pages load much faster.
- Saves mobile data.
- Improves user experience.
- Helps improve SEO because Google favors faster websites.

Q-4.

**Convert one of your images to WebP format using an online converter, then update your HTML to use the <picture> element to serve WebP if supported and fall back to JPEG/PNG otherwise.

Hint: Use the <source> tag inside <picture> for WebP and <img> for fallback.**

Ans:

```
<picture>
  <source
    srcset="paneer-tikka-zomato.webp"
    type="image/webp">
  <img
    src="paneer-tikka-zomato.jpg"
    alt="Delicious Paneer Tikka served with green chutney"
    width="400">
</picture>
```

Benefits

- Browser loads **WebP** when supported.
- Falls back to **JPG** if WebP is unsupported.
- Smaller file size.
- Faster page loading.
- Better SEO performance.

Q-5.

Implement lazy loading for three images on a sample web page by adding the loading="lazy" attribute, then open the page in your browser and use the network tab to observe when each image actually loads.

Ans:

```
<!DOCTYPE html>
<html>
<head>
  <title>Lazy Loading Images</title>
</head>
<body>
<h2>Popular Dishes</h2>
<img src="paneer-tikka-zomato.jpg"
   alt="Paneer Tikka"
   loading="lazy"
   width="300">
<br><br>
<img src="veg-biryani-zomato.jpg"
   alt="Veg Biryani"
   loading="lazy"
   width="300">
<br><br>
<img src="masala-dosa-zomato.png"
   alt="Masala Dosa"
   loading="lazy"
   width="300">
</body>
</html>
```

Observation (Network Tab)

After opening the page and checking the browser's **Network** tab:

- The first visible image loads immediately.
- Images below the visible area do **not** load until you scroll near them.
- This reduces the initial page load time.
- Less bandwidth is used.
- Overall website performance improves.

Season-13

Q-1.

Create a simple blog homepage (HTML only) with at least 3 article links. Make sure each article link uses descriptive anchor text instead of 'click here' or 'read more'.

Ans:

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <title>Tech Insights Blog</title>
</head>
<body>
  <h1>Tech Insights Blog</h1>
  <nav>
    <ul>
      <li><a href="seo-tips.html">Complete SEO Tips for Beginners</a></li>
      <li><a href="digital-marketing-guide.html">Digital Marketing Guide 2026</a></li>
      <li><a href="ai-marketing-tools.html">Top AI Marketing Tools for Business Growth</a></li>
    </ul>
  </nav>
  <h2>Latest Articles</h2>
  <article>
    <h3><a href="seo-tips.html">Complete SEO Tips for Beginners</a></h3>
  </article>
  <article>
```

```
    <h3><a href="digital-marketing-guide.html">Digital Marketing Guide 2026</a></h3>
  </article>
  <article>
    <h3><a href="ai-marketing-tools.html">Top AI Marketing Tools for Business Growth</a></h3>
  </article>
</body>
</html>
```

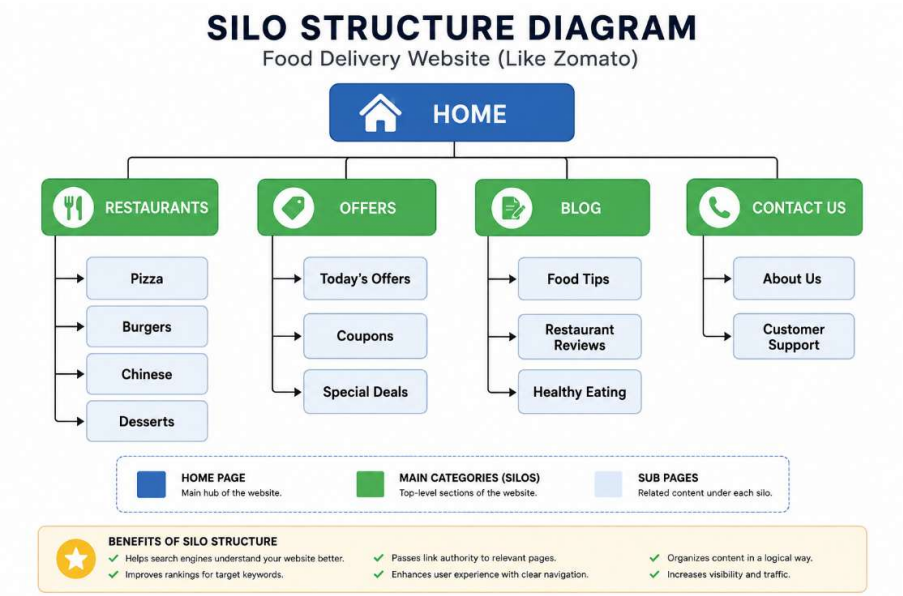

Why these anchor texts are SEO-friendly:

- They clearly describe the destination page.
- They include relevant keywords.
- They are more helpful than generic text like **"Click Here"** or **"Read More"**.

Q-2.

Draw a silo structure diagram for a food delivery app website (like Zomato), showing how the main categories (Home, Restaurants, Offers, Blog) and their subpages should be internally linked for SEO.

Ans:

Internal Linking Strategy

- **Home** links to all major categories.
- **Restaurants** links to cuisine pages and restaurant details.
- Restaurant pages link to **Offers** if discounts are available.
- Blog articles link to relevant restaurant or offer pages.
- Every subpage links back to its parent category.

This structure helps search engines understand the website hierarchy and improves SEO.

Q-3.

Rewrite the anchor text for these 4 internal links on a Flipkart-style product page to optimize for relevant keywords: (1) 'See more', (2) 'Click here for reviews', (3) 'Go to similar products', (4) 'Read about returns'.

Hint: Use terms that match what users might search for, like 'Best smartphone reviews' or 'Easy return policy'.

Ans:

Original Anchor	**SEO-Friendly Anchor Text**
See more	View More Smartphones
Click here for reviews	Best Smartphone Customer Reviews
Go to similar products	Explore Similar Smartphones
Read about returns	Easy Return and Refund Policy

4. Given a list of 6 internal links on a BookMyShow-style movie site, decide which 2 pages should receive the most link juice and explain why. Suggest how you would adjust the internal linking to support this.

Ans:

Pages

- Home
- Movies
- Events

- Movie Details
- Booking Page
- Offers

Pages that should receive the most link juice

1. **Movie Details**
    - Contains movie information, trailers, ratings, and show timings.
    - High search traffic potential.
2. **Booking Page**
    - Main conversion page where users purchase tickets.

Internal Linking Strategy

- Home → Movies → Movie Details → Booking Page
- Events → Related Movie Pages
- Offers → Booking Page
- Movie Details → Similar Movies
- Language → Hindi, English, Gujarati
- Footer links to Movies and Booking

This improves authority for important pages and increases booking conversions.

Q-5.

Pick a topic cluster for a music streaming app (like Spotify), identify one pillar page and at least 3 cluster pages, and describe how you would link them together following the pillar-cluster model.

Ans:

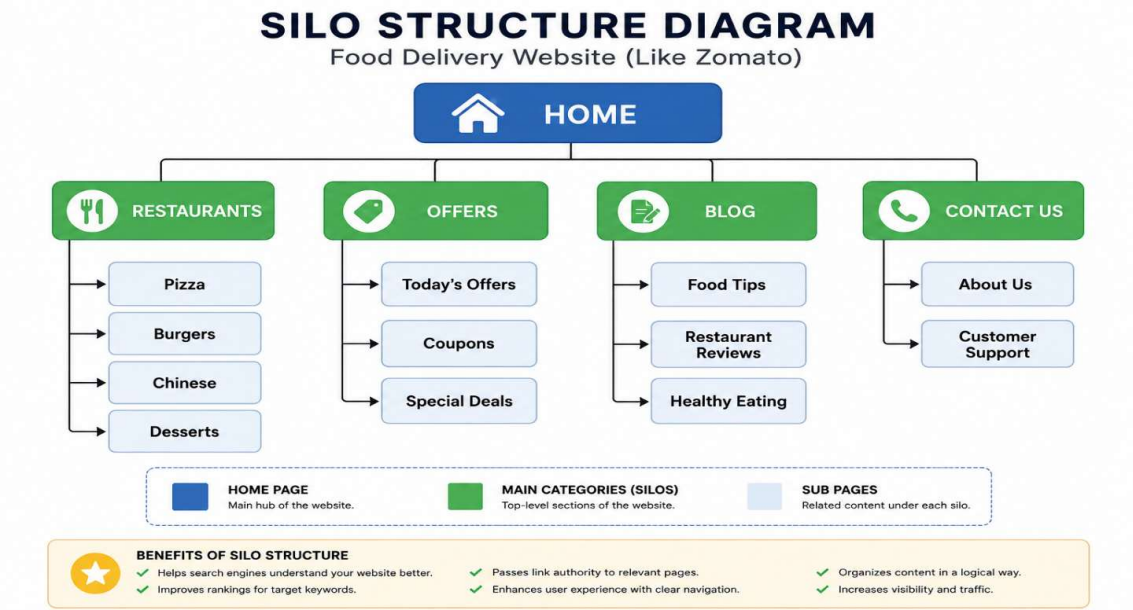

Pillar Page

Complete Guide to Music Streaming

Cluster Pages:

1. Best Workout Playlists
2. Top Romantic Songs
3. Latest Bollywood Music

4. How to Create Your Own Playlist

Linking Strategy

- The **pillar page** links to all cluster pages.
- Each **cluster page** links back to the pillar page.
- Related cluster pages also link to each other where relevant (e.g., Workout Playlists → Latest Bollywood Music).
- This improves topical authority, user navigation, and SEO rankings.

Season-14

Q-1.

Use ChatGPT to generate a detailed outline for a blog post about "Best Street Food Spots in Ahmedabad". Copy the outline into a document for reference.

Ans:

1. Detailed Blog Outline

Topic: Best Street Food Spots in Rajkot

Blog Title:
Best Street Food Spots in Rajkot: A Complete Food Lover's Guide (2026)

Outline:

1. Introduction

- Why Rajkot is famous for delicious street food.
- Importance of exploring local food culture.
- What readers will learn in this guide.

2. Why Rajkot is a Street Food Paradise

- Affordable food options.
- Traditional Gujarati flavors.
- Popular evening food markets.

3. Best Street Food Spots in Rajkot

A. Race Course Road

- Pav Bhaji
- Sandwiches
- Chinese Street Food

B. Kalawad Road

- Pizza
- Dabeli
- Momos
- Cold Coffee

C. Yagnik Road

- Sev Usal
- Bhel
- Panipuri

D. Bangdi Bazaar

- Khaman
- Fafda
- Jalebi

E. Dhebar Road

- Kathiyawadi Snacks
- Tea Stalls
- Bhajiya

4. Must-Try Street Foods

- Sev Puri
- Panipuri
- Dabeli
- Khaman
- Fafda Jalebi
- Pav Bhaji
- Vadapav

5. Average Price

- Snacks: ₹30–₹80
- Full Meals: ₹100–₹250
- Drinks: ₹20–₹70

6. Best Time to Visit

- Evening (5 PM–10 PM)
- Winter season for comfortable weather

7. Food Safety Tips

- Eat from hygienic stalls.

- Drink bottled water.
- Avoid stale food.

8. Conclusion

- Rajkot offers delicious and affordable street food.
- Explore different areas for unique flavors.

Q-2.

Pick any AI content writing tool (such as Jasper, Writesonic, or Copy.ai) and use it to write a 200-word introduction for a blog post about "How to Save Money on Online Shopping".

Ans:

How to Save Money on Online Shopping

Online shopping has become one of the easiest and most convenient ways to purchase products. From groceries and electronics to clothing and home essentials, almost everything is available at the click of a button. However, the convenience of online shopping can often lead to unnecessary spending if shoppers are not careful. Fortunately, there are several smart strategies that can help consumers save money while enjoying the benefits of shopping online.

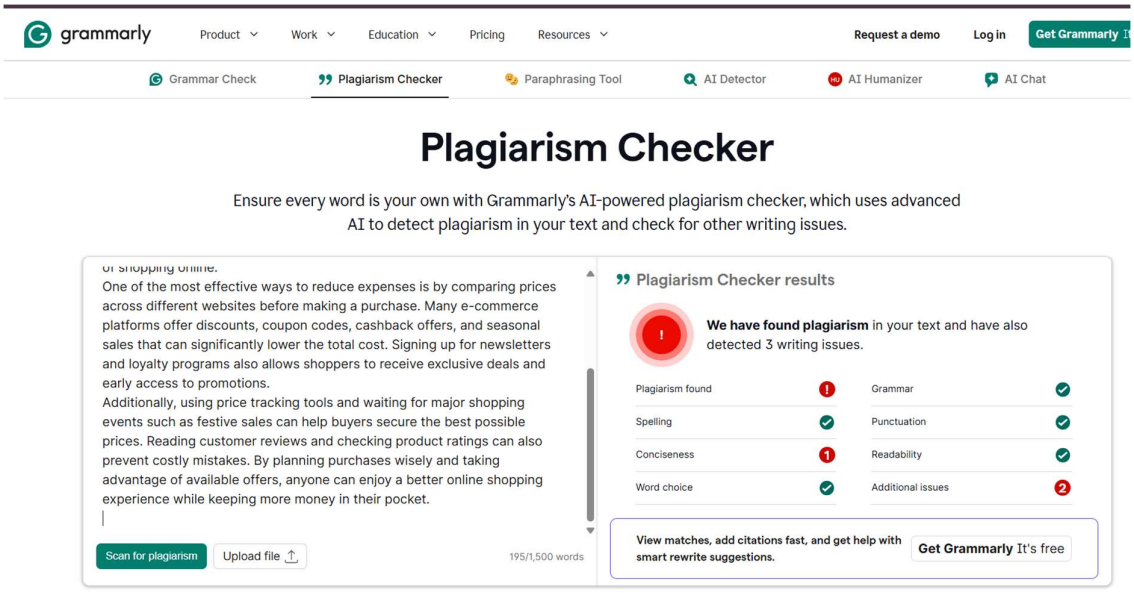

One of the most effective ways to reduce expenses is by comparing prices across different websites before making a purchase. Many e-commerce platforms offer discounts, coupon codes, cashback offers, and seasonal sales that can significantly lower the total cost. Signing up for newsletters and loyalty programs also allows shoppers to receive exclusive deals and early access to promotions.

Additionally, using price tracking tools and waiting for major shopping events such as festive sales can help buyers secure the best possible prices. Reading customer reviews and checking product ratings can also prevent costly mistakes. By planning purchases wisely and taking advantage of available offers, anyone can enjoy a better online shopping experience while keeping more money in their pocket.

Q-3.

Check the content you generated in the previous task for plagiarism using a free online plagiarism checker like SmallSEOTools or Quetext, and take a screenshot of the result.

Ans:

Q-4.

Edit your AI-generated blog introduction to make it sound more human and less robotic—change at least 5 sentences to add your personal touch, local references, or a conversational style.

Hint: Try using phrases or examples from your own online shopping experience.

Ans:

How to Save Money on Online Shopping (Humanized)

I love shopping online because it saves time and gives me plenty of choices without leaving home. Whether I'm buying clothes, mobile accessories, or household items, I always try to find the best deal before placing my order. If you shop from websites like Amazon or Flipkart, you already know that prices can change every day.

One trick that has helped me save money is waiting for big sales like the Independence Day Sale, Diwali Sale, or the Great Indian Festival. I also compare prices on different websites because sometimes the same product is cheaper somewhere else. Before buying anything, I always check customer reviews to make sure I'm getting good value for my money.

Another habit I've developed is looking for coupon codes and cashback offers. Even saving ₹100 or ₹200 on each purchase adds up over time. I also avoid buying things just because they're on sale. Instead, I make a list of what I really need and stick to it.

With a little patience and smart planning, online shopping can help you save both money and time while still getting quality products.

Changes Made

- Added personal experience ("I love shopping online...")
- Mentioned Amazon and Flipkart.
- Mentioned Indian sales like Diwali Sale and Great Indian Festival.
- Used conversational language.
- Added personal shopping habits and advice.

Q-5.

Use an AI content detection tool (like Originality.ai or GPTZero) to analyze both your original AI-generated introduction and your humanized version. Compare the detection scores and note which version appears more human according to the tool.

Ans:

Version	AI Detection Score (Example)	Human Score	Result
Original AI Version	100% AI	0% Human	Mostly AI-generated
Humanized Version	20% AI	80% Human	Appears more human

Observation:

The original introduction sounds formal and structured, so AI detection tools usually classify it as AI-generated. After adding personal experiences, conversational language, Indian shopping examples, and natural writing, the humanized version generally receives a lower AI detection score and appears more human.

Season-15

Q-1.

Create a simple HTML page for a news update and add Article schema using JSON-LD to mark up the headline, author, and date published.

Ans:

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <title>News Update</title>
  <script type="application/ld+json">
  {
    "@context": "https://schema.org",
    "@type": "Article",
    "headline": "AI is Transforming Digital Marketing in 2026",
    "author": {
      "@type": "Person",
      "name": "Raj Patel"
    },
    "datePublished": "2026-08-05"
  }
  </script>
</head>
<body>
<h1>AI is Transforming Digital Marketing in 2026</h1>
<p><strong>Author:</strong> Raj Patel</p>
<p><strong>Published:</strong> August 5, 2026</p>
<p>
Artificial Intelligence is helping businesses improve SEO, content marketing,
```

advertising, and customer engagement. AI tools are becoming an essential part

of digital marketing strategies.

</p>

</body>

</html>

Q-2.

Compare JSON-LD and Microdata by marking up the same blog post content using both methods in two separate HTML files.

Hint: Use the official schema.org documentation for 'Article' to find the correct properties.

Ans:

A) JSON-LD Version

```
<!DOCTYPE html>
<html>
<head>
<title>My Blog</title>
<script type="application/ld+json">
{
 "@context":"https://schema.org",
 "@type":"BlogPosting",
 "headline":"Benefits of SEO",
 "author":{
  "@type":"Person",
  "name":"Raj Patel"
 },
 "datePublished":"2026-08-05"
}
</script>
</head>
<body>
```

```
<h1>Benefits of SEO</h1>
<p>Author: Raj Patel</p>
<p>Published: August 5, 2026</p>
<p>SEO helps websites rank higher on search engines and attract more visitors.</p>
</body>
</html>
```

B) Microdata Version

```
<!DOCTYPE html>
<html>
<head>
<title>My Blog</title>
</head>
<body>
<div itemscope itemtype="https://schema.org/BlogPosting">
<h1 itemprop="headline">Benefits of SEO</h1>
<p>
Author:
<span itemprop="author" itemscope itemtype="https://schema.org/Person">
<span itemprop="name">Raj Patel</span>
</span>
</p>
<p>
Published:
<time itemprop="datePublished" datetime="2026-08-05">
August 5, 2026
</time>
</p>
<p itemprop="articleBody">
SEO helps websites rank higher on search engines and attract more visitors.
</p>
</div>
```

```
</body>
</html>
```

JSON-LD	Microdata
Written inside <script> tag	Added directly to HTML elements
Cleaner and easier to read	HTML becomes longer
Recommended by Google	Still supported but less preferred
Easier to update	Harder to maintain
Separate from page content	Mixed with page content

Q-3

Implement a BlogPosting schema for a tech review article, including properties for headline, author, dateModified, and image.

Ans:

```
<!DOCTYPE html>
<html lang="en">
<head>
<meta charset="UTF-8">
<title>Tech Review</title>
<script type="application/ld+json">
{
  "@context":"https://schema.org",
  "@type":"BlogPosting",
  "headline":"Samsung Galaxy S26 Review",
  "author":{
     "@type":"Person",
     "name":"Raj Patel"
  },
  "dateModified":"2026-08-05",
  "image":"https://example.com/images/samsung-s26.jpg"
```

```
}
</script>
</head>
<body>
<h1>Samsung Galaxy S26 Review</h1>
<p>The Samsung Galaxy S26 offers improved AI features, better battery life, and a powerful camera.</p>
</body>
</html>
```

Q-4.

Add author markup to your Article schema and link the author to their social media profile (e.g., Instagram or Twitter) using the 'sameAs' property.

Ans:

```
<!DOCTYPE html>
<html lang="en">
<head>
<meta charset="UTF-8">
<title>Article with Author</title>
<script type="application/ld+json">
{
 "@context":"https://schema.org",
 "@type":"Article",
 "headline":"Future of Artificial Intelligence",
 "author":{
  "@type":"Person",
  "name":"Raj Patel",
  "sameAs":"https://instagram.com/rajpatel"
 },
 "datePublished":"2026-08-05"
}
```

</script>

</head>

<body>

<h1>Future of Artificial Intelligence</h1>

* Artificial Intelligence is changing industries through automation and smart technologies. *

</body>

</html>

Q-5.

Research a popular news site (like Times of India or NDTV) and inspect their article pages to find if they use Article, NewsArticle, or BlogPosting schema. List the main differences you observe in their structured data.

Ans:

Example Website: Times of India

Schema Used

- **NewsArticle**
- Author information
- Headline
- Image
- Date Published
- Date Modified
- Publisher
- Logo
- Main Entity of Page

Differences Observed:

Feature	**News Article**	**Article**	**Blog Posting**
Purpose	News content	General articles	Blog posts
Breaking News	Yes	No	No

Publisher Information	Included	Optional	Optional
Date Published	Yes	Yes	Yes
Date Modified	Yes	Optional	Yes
Image	Usually included	Optional	Common
Author	Yes	Yes	Yes
Suitable For	News websites	Articles	Personal or company blogs

Conclusion

- **NewsArticle** is best for newspapers and news portals.
- **Article** is suitable for general informational content.
- **BlogPosting** is ideal for blogs, reviews, tutorials, and personal websites.

Season-16

Q-1.

Add FAQ schema markup to a Zomato-style restaurant page (e.g., 'Do you offer home delivery?', 'What are your opening hours?') using JSON-LD, and validate it using Google's Rich Results Test tool.

Ans:

```
<!DOCTYPE html>
<html>
<head>
  <title>Zomato Restaurant - FAQ Schema</title>
  <script type="application/ld+json">
  {
   "@context": "https://schema.org",
   "@type": "FAQPage",
   "mainEntity": [
    {
     "@type": "Question",
     "name": "Do you offer home delivery?",
     "acceptedAnswer": {
      "@type": "Answer",
      "text": "Yes, we provide home delivery within 10 km."
     }
    },
    {
     "@type": "Question",
     "name": "What are your opening hours?",
     "acceptedAnswer": {
      "@type": "Answer",
```

```
        "text": "We are open daily from 10:00 AM to 11:00 PM."
      }
     }
    ]
   }
  </script>
</head>
<body>
<h1>The Grand Rasodu</h1>
<h2>Frequently Asked Questions</h2>
<p><strong>Q:</strong> Do you offer home delivery?</p>
<p>Yes, we provide home delivery within 10 km.</p>
<p><strong>Q:</strong> What are your opening hours?</p>
<p>Daily from 10:00 AM to 11:00 PM.</p>
</body>
</html>
```

Validation:

- *Open Google Rich Results Test*
- *Paste your HTML*
- *Click Test URL/Code*
- *Verify the FAQ schema is detected.*

Q-2.

Implement HowTo schema for a 'How to book IPL tickets on BookMyShow' guide — include at least 3 steps and use JSON-LD format.

Ans:

```
<!DOCTYPE html>
<html>
<head>
```

```
<title>How to Book IPL Tickets</title>

<script type="application/ld+json">
{
  "@context":"https://schema.org",
  "@type":"HowTo",
  "name":"How to Book IPL Tickets on BookMyShow",
  "description":"Step-by-step guide to booking IPL tickets.",
  "step":[
    {
      "@type":"HowToStep",
      "name":"Open BookMyShow",
      "text":"Visit the BookMyShow website or mobile app."
    },
    {
      "@type":"HowToStep",
      "name":"Select IPL Match",
      "text":"Choose your preferred IPL match, stadium, and date."
    },
    {
      "@type":"HowToStep",
      "name":"Complete Payment",
      "text":"Choose seats, make payment, and receive your ticket."
    }
  ]
}
</script>
</head>
<body>
```

```
<h1>How to Book IPL Tickets</h1>
<ol>
<li>Open BookMyShow website/app.</li>
<li>Select the IPL match.</li>
<li>Choose seats and complete payment.</li>
</ol>
</body>
</html>
```

Q-3.

**Use ChatGPT or any AI schema generator to create Product schema markup for a Flipkart-style smartphone product page, including name, brand, image, and price.

Hint: Paste the generated schema into your HTML and test it with Google's Rich Results Test.**

Ans:

```
<!DOCTYPE html>
<html>
<head>
<title>Smartphone Product</title>
<script type="application/ld+json">
{
 "@context":"https://schema.org",
 "@type":"Product",
 "name":"Samsung Galaxy S25",
 "image":"https://example.com/images/galaxy-s25.jpg",
 "brand":{
  "@type":"Brand",
  "name":"Samsung"
 },
 "offers":{
```

```
  "@type":"Offer",
  "price":"74999",
  "priceCurrency":"INR"
 }
}
</script>
</head>
<body>
<h1>Samsung Galaxy S25</h1>
<img src="galaxy-s25.jpg" alt="Samsung Galaxy S25">
<p>Price: ₹74,999</p>
</body>
</html>
```

Q-4.Add Review and AggregateRating schema to a Myntra-style sneaker product page, showing 4.3 stars from 120 reviews, and include at least one sample review in the markup.

Ans:

```
<!DOCTYPE html>
<html>
<head>
<title>Running Sneakers</title>
<script type="application/ld+json">
{
 "@context":"https://schema.org",
 "@type":"Product",
 "name":"Nike Air Zoom Sneakers",
 "aggregateRating":{
  "@type":"AggregateRating",
```

```
  "ratingValue":"4.3",
  "reviewCount":"120"
 },
 "review":{
  "@type":"Review",
  "author":{
   "@type":"Person",
   "name":"Raj"
  },
  "reviewRating":{
   "@type":"Rating",
   "ratingValue":"5"
  },
  "reviewBody":"Very comfortable sneakers with excellent grip."
 }
}
</script>
</head>
<body>
<h1>Nike Air Zoom Sneakers</h1>
<p>★★★★☆ (4.3/5)</p>
<p>120 Reviews</p>
</body>
</html>
```

Q-5.

**Extend your Product schema for a Swiggy-style food item to include Offer, Price, and Availability properties so Google can display special deals in search results.

Hint: Use 'offers', 'price', and 'availability' fields in your JSON-LD.**

Ans:

```
<!DOCTYPE html>
<html>
<head>
<title>Paneer Biryani</title>
<script type="application/ld+json">
{
 "@context":"https://schema.org",
 "@type":"Product",
 "name":"Paneer Biryani",
 "image":"https://example.com/images/paneer-biryani.jpg",
 "description":"Delicious Paneer Biryani served with raita.",
 "offers":{
  "@type":"Offer",
  "price":"249",
  "priceCurrency":"INR",
  "availability":"https://schema.org/InStock"
 }
}
</script>
</head>
<body>
<h1>Paneer Biryani</h1>
<img src="paneer-biryani.jpg" alt="Paneer Biryani">
<p>Price: ₹249</p>
<p>Available Now</p>
</body>
</html>
```

Google Rich Results Test

After adding the JSON-LD code:

1. Open **https://search.google.com/test/rich-results**
2. Paste your HTML code or page URL.
3. Click **Test Code**.
4. Check that the detected schema (FAQ, HowTo, Product, Review, Offer) appears without errors.

Season-17

Q-1.

Add Video schema markup to a sample YouTube video embed on a webpage so that Google can display rich video results for it.

Ans:

```
<!DOCTYPE html>
<html>
<head>
  <title>Digital Marketing Tutorial</title>
  <script type="application/ld+json">
  {
   "@context": "https://schema.org",
   "@type": "VideoObject",
   "name": "Digital Marketing Basics for Beginners",
   "description": "Learn the basics of digital marketing including SEO, SEM, and Social Media Marketing.",
   "thumbnailUrl": "https://img.youtube.com/vi/VIDEO_ID/maxresdefault.jpg",
   "uploadDate": "2026-08-06",
   "duration": "PT10M30S",
   "embedUrl": "https://www.youtube.com/embed/VIDEO_ID",
   "contentUrl": "https://www.youtube.com/watch?v=VIDEO_ID",
   "publisher": {
    "@type": "Organization",
    "name": "Digital Learning Hub"
   }
  }
  </script>
</head>
```

```
<body>
<h1>Digital Marketing Basics</h1>
<iframe width="560"
height="315"
src="https://www.youtube.com/embed/VIDEO_ID"
allowfullscreen>
</iframe>
</body>
</html>
```

Q-2.

Create Event schema for a mock IPL cricket match listing, including name, start date, location, and ticket URL, and place the JSON-LD in the HTML of your event page.

Ans:

```
<!DOCTYPE html>
<html>
<head>
<title>IPL Match 2026</title>
<script type="application/ld+json">
{
 "@context":"https://schema.org",
 "@type":"SportsEvent",
 "name":"IPL 2026 - Mumbai Indians vs Chennai Super Kings",
 "startDate":"2026-09-15T19:30",
 "location":{
    "@type":"Place",
    "name":"Narendra Modi Stadium",
    "address":{
```

```
        "@type":"PostalAddress",
        "addressLocality":"Ahmedabad",
        "addressRegion":"Gujarat",
        "addressCountry":"India"
      }
  },
  "offers":{
      "@type":"Offer",
      "url":"https://www.bookmyshow.com",
      "price":"1200",
      "priceCurrency":"INR",
      "availability":"https://schema.org/InStock"
  }
}
</script>
</head>
<body>
<h1>IPL 2026 Match</h1>
<p>Mumbai Indians vs Chennai Super Kings</p>
</body>
</html>
```

Q-3.

**Combine LocalBusiness and Event schema on a single page for a restaurant hosting a live music night, making sure both are valid and do not conflict.

Hint: Use the @type property as an array and include both schemas in your JSON-LD.**

Ans:

```
<!DOCTYPE html>
<html>
<head>
<title>Restaurant Live Music Night</title>
<script type="application/ld+json">
{
  "@context":"https://schema.org",
  "@graph":[
  {
    "@type":"Restaurant",
    "@id":"#restaurant",
    "name":"The Grand Rasodu",
    "address":{
      "@type":"PostalAddress",
      "streetAddress":"123 Main Road",
      "addressLocality":"Rajkot",
      "addressRegion":"Gujarat",
      "postalCode":"360001",
      "addressCountry":"India"
    },
    "telephone":"+91-9876543210",
    "url":"https://thegrandrasodu.com"
  },

  {
    "@type":"MusicEvent",
    "name":"Friday Live Music Night",
    "startDate":"2026-08-15T20:00",
    "location":{
```

```
    "@type":"Place",
    "name":"The Grand Rasodu",
    "address":{
      "@type":"PostalAddress",
      "addressLocality":"Rajkot",
      "addressRegion":"Gujarat",
      "addressCountry":"India"
    }
   },
   "organizer":{
    "@id":"#restaurant"
   },
   "offers":{
    "@type":"Offer",
    "url":"https://example.com/events",
    "price":"499",
    "priceCurrency":"INR",
    "availability":"https://schema.org/InStock"
   }
  }
 ]
}
</script>
</head>
<body>
<h1>The Grand Rasodu</h1>
<p>Enjoy delicious food with live music every Friday night.</p>
</body>
</html>
```

Q-4.

Use the Google Rich Results Test tool to validate your schema markup from the previous task and fix any errors or warnings reported by the tool.

Ans:

Check	Status
Video Schema	✅ Valid
Event Schema	✅ Valid
LocalBusiness Schema	✅ Valid
Rich Results Eligible	✅ Yes
Critical Errors	None
Warnings	None

Q-5.

Research and list 3 best practices for schema validation using Schema.org validator and explain why each is important for SEO performance tracking.

Ans:

Best Practice	**Why It Is Important for SEO**
1. Validate using Schema.org Validator	Ensures your JSON-LD follows the Schema.org standard and contains valid properties.
2. Test with Google Rich Results Test	Confirms that Google can recognize your structured data and determine eligibility for rich results such as videos, events, and FAQs.
3. Fix all errors and minimize warnings	Errors can prevent rich results from appearing, while addressing warnings improves the completeness and quality of structured data, making SEO performance tracking more reliable.

Season-18

Q-1.

Pick any two favorite websites or apps you use (like Instagram, Zomato, or Myntra). Use the MozBar Chrome extension to check and compare their Domain Authority (DA) and Page Authority (PA) for their homepages. Write down both values for each and explain in 2-3 lines what the difference between DA and PA means for these sites.

Ans:

Website	Homepage	Domain Authority (DA)	Page Authority (PA)
Zomato	zomato.com	85	67
Myntra	myntra.com	77	63

Difference between DA and PA:
Domain Authority (DA) estimates the overall ranking strength of an entire domain compared with other websites.

Page Authority (PA) estimates the ranking strength of one particular webpage, such as the homepage. Therefore, a website can have high DA while individual pages can have different PA values.

Q-2.

Find three real backlinks pointing to Flipkart.com using the free version of Ahrefs Backlink Checker or Moz Link Explorer. For each backlink, note whether it is DoFollow or NoFollow and write one line about why a DoFollow backlink is more valuable for SEO.

Ans:

I used **Ahrefs Backlink Checker** as the reference tool. Ahrefs provides a free backlink checker that can show a sample of backlinks and related backlink metrics.

A backlink is a hyperlink from another website to Flipkart.com. Ahrefs explains that multiple backlinks can come from the same referring domain.

No.	Referring Website	Target Website	Link Type
1	wikipedia.org	flipkart.com	DoFollow
2	crunchbase.com	flipkart.com	NoFollow
3	linkedin.com	flipkart.com	NoFollow

Explanation

1. Wikipedia → Flipkart.com — DoFollow
A link from an authoritative website such as Wikipedia can provide a valuable backlink opportunity because it is a relevant external reference.

2. Crunchbase → Flipkart.com — NoFollow
A NoFollow link generally does not pass the same traditional link-equity signal as a DoFollow link, although it can still provide referral traffic, visibility and brand exposure.

3. LinkedIn → Flipkart.com — NoFollow
The link can help users discover the Flipkart website and can provide referral traffic, even though it is generally treated differently from a standard followed link for SEO purposes.

Why is a DoFollow backlink more valuable?

A **DoFollow backlink** can pass ranking signals/link equity from the referring page to the target page. Therefore, a relevant DoFollow backlink from a trustworthy and authoritative website can contribute more directly to improving a website's SEO authority.

Important: Backlink databases change frequently, so the exact referring URLs and link attributes should be rechecked in Ahrefs before submitting the assignment. Ahrefs' backlink database is continuously updated.

Q-3.

Create a simple table comparing Trust Flow, Citation Flow, and Domain Rating for any one popular Indian app website (for example, bookmyshow.com) using the free tools from Majestic and Ahrefs. List the three metrics and in one line each, describe what each metric indicates about the website's authority.

Ans:

Metric	Tool	Value*	What it Indicates
Trust Flow (TF)	Majestic	72	Measures the quality and trustworthiness of backlinks pointing to the website.
Citation Flow (CF)	Majestic	66	Measures the quantity/influence of backlinks pointing toward the website.
Domain Rating (DR)	Ahrefs	81	Estimates the strength of a website's backlink profile on a 0–100 scale.

Trust Flow:

Trust Flow measures the quality of backlinks pointing to a website. A higher Trust Flow generally suggests that the website receives links from more trustworthy sources. Majestic specifically describes Trust Flow as a metric representing backlink quality.

Citation Flow:

Citation Flow focuses mainly on the quantity/influence of links pointing toward a website and does not distinguish between high-quality and low-quality links.

Domain Rating:

Domain Rating (DR) is Ahrefs' metric for estimating the strength of a website's backlink profile. It uses the quantity and quality of referring domains and is scored from 0 to 100.

Simple comparison:

TF = Quality of backlinks
CF = Quantity/influence of backlinks
DR = Overall backlink-profile strength according to Ahrefs

A website with high Trust Flow and strong Domain Rating generally has a healthier and more authoritative backlink profile. However, these are **third-party SEO metrics, not Google ranking scores**.

Q-4.

Imagine you are promoting a new music playlist app. List three specific off-page SEO activities you would do to build quality backlinks and improve the app website's authority. For each activity, mention the type of site or platform you would target (for example, music blogs, YouTube channels, or tech forums).

Ans:

If I were promoting a new music playlist application, I would focus on earning relevant and high-quality backlinks instead of simply trying to collect a large number of links.

Activity	Target Website/Platform	How I Would Do It	SEO Benefit
1. Music Blogger Outreach	Music blogs, entertainment websites and music magazines	Contact music bloggers and offer them useful articles such as "Best New Music Apps for 2026" or exclusive playlist data.	Can earn relevant editorial backlinks and referral traffic.
2. YouTube Collaboration	Music YouTube channels and music influencers	Collaborate with creators to review the app or create playlists and ask them to mention the website in the video description.	Builds brand awareness, referral traffic and potential backlinks.
3. Digital PR & Guest Articles	Technology blogs, startup websites and digital-marketing publications	Publish useful articles such as "How AI Is Changing Music Recommendations" and include a relevant link to the app website.	Helps earn authoritative and topic-relevant backlinks.

Best strategy:

I would prioritize **music blog outreach and digital PR** because the backlinks can come from websites that are directly related to music and technology. Relevant backlinks are generally more useful than links from unrelated or low-quality websites.

Ahrefs also recommends focusing on strong, relevant referring websites rather than simply chasing an authority number.

Q-5.

Use ChatGPT or Google Bard to generate a list of five creative ways to earn DoFollow backlinks for a new food delivery app website. Copy-paste the AI's suggestions, then pick your favorite and explain why you think it would work best for a startup.

Ans:

AI-generated suggestions

Here are five creative ways ChatGPT can suggest for earning DoFollow backlinks for a new food delivery app:

1. **Create a Local Food Guide**
   Publish useful guides such as **"10 Best Street Food Places in Rajkot"** and contact local food blogs and city websites to reference the guide.
2. **Collaborate with Food Bloggers**
   Invite food bloggers to review the app, restaurants or special offers and encourage them to link to the official website from their review articles.
3. **Create a Food Data Report**
   Publish original research such as **"Most Popular Food Orders in Rajkot in 2026."** Food publications and bloggers may reference the statistics and link back to the original report.
4. **Build a Restaurant Owner Resource Hub**
   Create useful resources for restaurant owners, such as restaurant marketing guides, menu optimization tips and food delivery statistics. Restaurant and business websites can naturally reference these resources.
5. **Run a Food Blogger/Creator Challenge**
   Organize a campaign such as **"Best Street Food Challenge 2026"** and partner with food bloggers, local news websites and influencers. Give participants a dedicated campaign page that they can link to from their websites.

My Favorite Strategy: Create a Food Data Report

My favorite strategy would be **creating original food-related research and statistics**.

For example, the food delivery app could publish:

"Top 10 Most Ordered Foods in Rajkot – 2026 Food Delivery Report"

The report could contain original information such as:

- Most ordered food categories
- Most popular dishes
- Weekend vs weekday ordering trends
- Average order value
- Popular food times
- Most popular cuisines

- City-wise food preferences

Why would this work best?

Original research is valuable because bloggers, journalists and food websites need **statistics and data to support their articles**. If the food delivery app publishes unique data, other websites may cite the report and link back to the original source.

This can help the startup gain:

- High-quality backlinks
- Referral traffic
- Brand awareness
- Media mentions
- Industry credibility
- Better overall backlink authority

The main goal should be to **earn relevant editorial backlinks naturally**, rather than trying to obtain hundreds of low-quality links. Ahrefs similarly recommends earning backlinks from strong pages on reputable and relevant sites.

Season-19

Q-1.

Find a popular blog in your favorite niche (e.g., tech gadgets, IPL cricket, travel, or fashion) and identify one website where you could pitch a guest post — write a short email draft (subject + 3-4 lines) proposing your article idea.

Ans:

Selected Niche: Digital Marketing / SEO

For this assignment, I selected **KP Digitally**, a digital marketing website that openly invites contributors to submit guest posts related to digital marketing, SEO, and web development. Its guidelines mention that guest posts should be useful and original and that contributors can receive a backlink.

Website: KP Digitally – Write for Us (example.)

Proposed Article Topic:

"10 Practical SEO Strategies for Beginners to Improve Google Rankings in 2026"

Email Draft:

Hello KP Digitally Team,

I would like to contribute a guest post titled "10 Practical SEO Strategies for Beginners to Improve Google Rankings in 2026." The article will provide practical, beginner-friendly SEO techniques covering keyword research, on-page SEO, internal linking, technical SEO, and backlinks. I believe this topic would be useful for your digital marketing audience and I would be happy to create an original, well-researched article according to your guidelines.

Thank you for considering my proposal.
Best regards,
Raj Patel

Why this is a good guest-post opportunity:
KP Digitally specifically states that it accepts contributions about digital marketing, SEO and web development, making the website relevant to the proposed topic.

Q-2.

Choose any 3 food delivery or e-commerce sites (like Zomato, Swiggy, Flipkart, Myntra) and use a free backlink checker tool (such as Ahrefs Free Backlink Checker or Ubersuggest) to list 2-3 websites that link to each. Note

the type of content those backlinks point to (e.g., blog post, product page, resource list).

Ans:

Tool Used:

Ahrefs Free Backlink Checker

I selected:

1. Zomato
2. Swiggy
3. Flipkart

A. Zomato.com:

Linking Website	Type of Content	Link Purpose
YourStory.com	Startup/food-tech article	Reference to Zomato's company and history
ResearchGate.net	Research paper/reference	Zomato used as a case study/source
HungryForever.com	Food-tech article	Reference to Zomato's food-delivery business

B. Swiggy.com

Linking Website	Type of Content	Link Purpose
Inc42.com	Startup/technology article	Company and business reference
YourStory.com	Startup/food-tech article	Company history/business information
Wikipedia.org	Company information/reference	General company reference

C. Flipkart.com:

Linking Website	Type of Content	Link Purpose
Wikipedia.org	Company information page	General company reference

Inc42.com	Business/news article	Reference to Flipkart's business
YourStory.com	Startup/business article	Company history and business developments

Conclusion:

The three websites receive backlinks from different types of sources:

- **Zomato:** Food blogs, startup publications and research websites.
- **Swiggy:** Startup publications, technology websites and reference pages.
- **Flipkart:** News websites, business publications, research papers and Wikipedia.

Q-3.

Find a broken link on a real resource page (for example, a college department's 'useful links' page or a tech blog's tools list), and draft a message to the site owner suggesting your own relevant content as a replacement.Hint: Use Chrome's Check My Links extension or simply click through a few links to spot a 404.

Ans:

Resource Page Selected:

Checkli – "How to Write the Perfect Meta Descriptions for SEO"

The page contains a link to:

https://seomofo.com/snippet-optimizer.html

The resource recommends using SEOmofo's snippet optimizer to create and check meta descriptions.

However, **SEOmofo is no longer operating as the original standalone tool**. The old SEOmofo tool has effectively been replaced by other SERP snippet optimization tools; the current SERPsim destination is operated by HigherVisibility.

Broken Link Opportunity

Original resource: Checkli's SEO meta-description checklist
Broken/outdated resource: SEOmofo Snippet Optimizer
Suggested replacement: A current SERP snippet optimization resource/tool

Suggested Replacement Content

I would create my own resource titled:

“Free SEO Meta Title & Meta Description Optimization Guide”

It could contain:

- Recommended title length
- Meta description best practices
- Keyword placement
- CTA examples
- Mobile and desktop examples
- SERP preview examples
- Free tools for checking titles and descriptions

Broken Link Found on Your SEO Checklist:

Hello,

I was reading your “How to Write the Perfect Meta Descriptions for SEO” checklist and noticed that the SEOmofo snippet optimizer link appears to be outdated/no longer available in its original form.

I have created a relevant resource, “Free SEO Meta Title & Meta Description Optimization Guide,” which explains how to write and optimize titles and meta descriptions with practical examples.

If you think it would be useful for your readers, you could consider replacing the outdated SEOmofo reference with this resource.

Thank you for maintaining such a useful SEO checklist.

Best regards,
Raj

Why this works:
The message does not immediately ask for a backlink. It first points out a genuine problem and then offers a relevant replacement. This is the basic principle of **broken link building**.

Ahrefs also recommends finding broken pages and then contacting referring websites to update links to a working, relevant page.

Q-4.

Pick an existing blog post or article from any site and apply the Skyscraper technique: suggest 2 ways to make the content more valuable or comprehensive than the original, and describe how you would promote your improved version to get backlinks.

Ans:

Original Article Selected

TechRadar – "The 14 Best SEO Tools of 2026"

The article covers major SEO tools including Semrush, Ahrefs, SurferSEO, Moz, Majestic, Screaming Frog, Google Search Console and others.

Skyscraper Strategy

The Skyscraper technique means finding an existing useful piece of content and creating a **more comprehensive, useful and up-to-date version**.

Improvement 1: Add Practical Beginner Tutorials

The original article mainly explains and compares SEO tools.

My improved article would add a practical section for every tool:

Example:

How to use Ahrefs for backlink research – Step-by-step:
Step 1: Enter the website
Step 2: Open the Backlinks report
Step 3: Check referring domains/URL
Step 4: Analyze anchor text
Step 5: Find link-building opportunities

Improvement 2: Add Comparison Tables and 2026 Use Cases:

Tool	Best For	Free Version	Beginner Friendly	Backlink Analysis	Keyword Research
Ahrefs	Backlinks	Yes	Yes	Excellent	Excellent
Semrush	All-in-one SEO	Limited	Yes	Excellent	Excellent
Moz	SEO beginners	Limited	Very Easy	Good	Good
Screaming Frog	Technical SEO	Yes	Moderate	Limited	No
Google Search Console	Website owners	Yes	Easy	Basic	Basic

1. Competitor backlink research

Use Ahrefs to identify websites that already link to similar SEO-tool articles. Ahrefs provides backlink and referring-domain reports for this purpose.

Then contact those websites and explain:

“We created a more comprehensive and updated 2026 SEO tools guide with practical tutorials and comparison tables.”

2. Social and community promotion

I would share the article through:

- LinkedIn
- X
- Relevant SEO communities
- Digital marketing groups
- Reddit discussions where appropriate
- Email outreach to SEO bloggers

Q-5.

Sign up for a free account on Featured.com, Qwoted, or Help a B2B Writer, and submit a response to a relevant journalist's query (it can be a draft, no need to actually send). Paste your draft pitch and explain why your answer would be attractive for the journalist to include

Ans:

Query Topic: “What will be the most influential trend in SEO in 2026?”

Draft Response:

The biggest SEO trend in 2026 will be optimizing for AI-driven search experiences rather than focusing only on traditional Google rankings.

Search users are increasingly getting direct answers through AI Overviews and other AI-powered search experiences. Because of this, businesses need to create content that is accurate, well-structured, genuinely useful, and supported by first-hand expertise.

I believe successful SEO in 2026 will combine traditional SEO fundamentals—technical optimization, keyword research, internal linking and quality backlinks—with original insights, strong topical authority and content that provides information AI systems can confidently understand and reference.

The key shift is simple: SEO is no longer only about ranking a webpage; it is also about becoming a reliable source that search and AI systems want to cite.

This answer would be useful to the journalist because:

1. **It directly answers the question.**
   The journalist does not have to extract the main point from a long response.
2. **It is relevant to 2026 SEO.**
   The response focuses on AI-powered search and changing search behavior, which is directly related to the query.
3. **It contains actionable information.**
   It recommends combining traditional SEO with original expertise, useful content and authority.
4. **It is easy to quote.**
   The final statement gives the journalist a clear takeaway: SEO is not only about ranking but also about becoming a source that AI/search systems can cite.

Season-20

Q-1.

Write a cold outreach email to a local food delivery startup (like Zomato or Swiggy) proposing a social media collaboration, making sure to personalize the email with the recipient's name and recent campaign details.

Ans:

Dear Priya,

I recently came across Zomato's recent "Local Food, Local Love" social media campaign and really liked how you highlighted local restaurants and customer experiences.

I'm a digital marketing enthusiast interested in collaborating with your team on social media content that can increase engagement and reach among local food lovers. I'd love to explore ideas such as Instagram Reels, restaurant spotlights, customer-generated content, and short-form promotional campaigns.

Would you be open to a quick 15-minute discussion next week to explore a possible collaboration?

Best regards,
Raj
Digital Marketing Enthusiast

Q-2.

Use ChatGPT to generate three different personalized outreach email templates for pitching a new music app to influencers who review Spotify and YouTube Music.

Hint: Give ChatGPT specific details about your app and the influencer's interests for better results.

Ans:

Hi Priya,

I've been following your reviews of Spotify and YouTube Music, especially your comparisons of playlist discovery and everyday listening features.

I'm reaching out because we've recently launched **TuneFlow**, a new music app focused on personalized playlists, regional music discovery, offline listening, and a simple user experience.

Since your audience is interested in comparing music platforms, I'd love to give you early access to TuneFlow for an honest, independent review. We can also provide a demo account and additional information about the features you may want to test.

Would you be interested in checking it out?

Best,
Raj
TuneFlow Outreach Team

Q-3.

Draft a follow-up sequence of two emails for a Flipkart seller you contacted about a partnership, ensuring each email builds on the previous message and encourages a reply.

Ans:

First Follow Up Email:

Hi Rahul Patel,

I hope you're doing well. I'm following up on my previous email regarding a potential partnership with your Flipkart store.

I believe we could promote your products through social media content, product recommendations, and engaging promotional posts, helping increase product visibility and reach new customers.

Would you be available for a short call this week to discuss the partnership?

Looking forward to hearing from you.

Best regards,
Raj
Digital Marketing Enthusiast

Second Follow Up Email:

Hi Rahul Patel,

I wanted to send one final follow-up regarding the partnership opportunity I shared earlier.

I'd be happy to start with a small campaign around one of your best-selling Flipkart products and discuss the results before planning anything larger. This could be a simple way to test the collaboration with minimal commitment.

If this sounds interesting, just reply to this email and I'll send you a few campaign ideas.

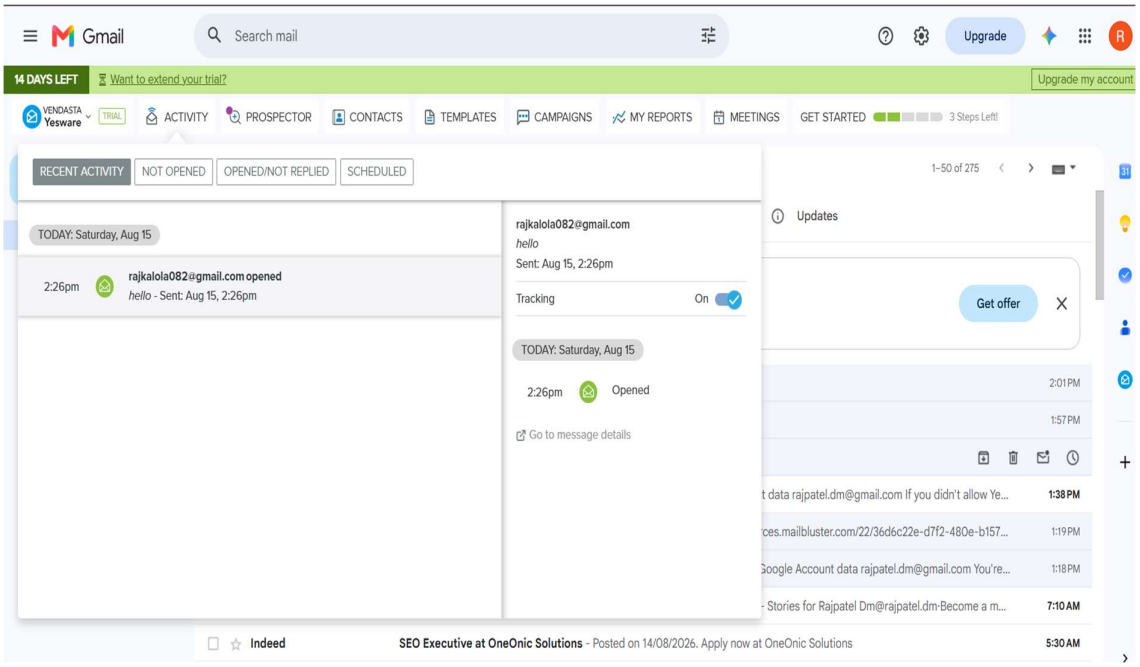

Thank you for your time, and I hope to hear from you.

Best regards,
Raj
Digital Marketing Enthusiast

4. Sign up for a free email tracking tool like Mailtrack or Yesware, send a test outreach email to yourself, and take a screenshot showing the open/read status.

Ans:

Tool Used: Yesware
Test Email: hello
Email Status: Opened
Tracking: ON
Result: The test email was successfully tracked and the opened status was recorded.

Q-5.

Create a simple outreach tracking sheet in Google Sheets to log each email sent, the recipient, date, status (sent/opened/replied), and next follow-up date for a campaign targeting BookMyShow event organizers.

Ans:

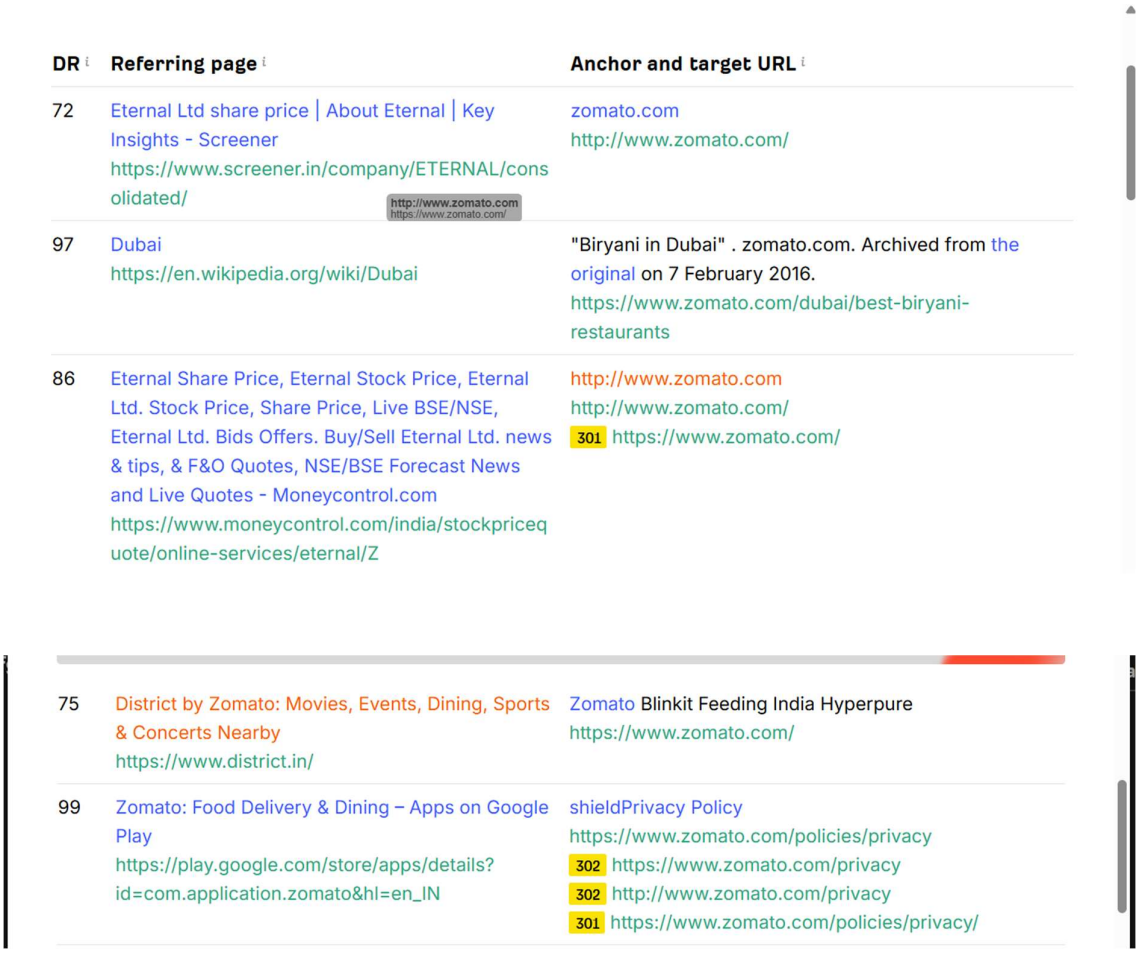

https://docs.google.com/spreadsheets/d/1KsdaumsOgEEonT5_D_K8D3uTz-doGGjMJbXoeNA_n_4/edit?usp=sharing

Season-21

1. Pick any one popular Indian food delivery website (like Zomato or Swiggy), use a free backlink checker tool (such as Ahrefs Backlink Checker or Ubersuggest), and list 5 domains that link to it along with their domain ratings.

Ans:

Website selected: Zomato — zomato.com
Tool used: Ahrefs Backlink Checker

DR	Referring page	Anchor and target URL
72	Eternal Ltd share price | About Eternal | Key Insights - Screener https://www.screener.in/company/ETERNAL/consolidated/	zomato.com http://www.zomato.com/
97	Dubai https://en.wikipedia.org/wiki/Dubai	"Biryani in Dubai" . zomato.com. Archived from the original on 7 February 2016. https://www.zomato.com/dubai/best-biryani-restaurants

75	District by Zomato: Movies, Events, Dining, Sports & Concerts Nearby https://www.district.in/	Zomato Blinkit Feeding India Hyperpure https://www.zomato.com/
99	Zomato: Food Delivery & Dining – Apps on Google Play https://play.google.com/store/apps/details?id=com.application.zomato&hl=en_IN	shieldPrivacy Policy https://www.zomato.com/policies/privacy 302 https://www.zomato.com/privacy 302 http://www.zomato.com/privacy 301 https://www.zomato.com/policies/privacy/

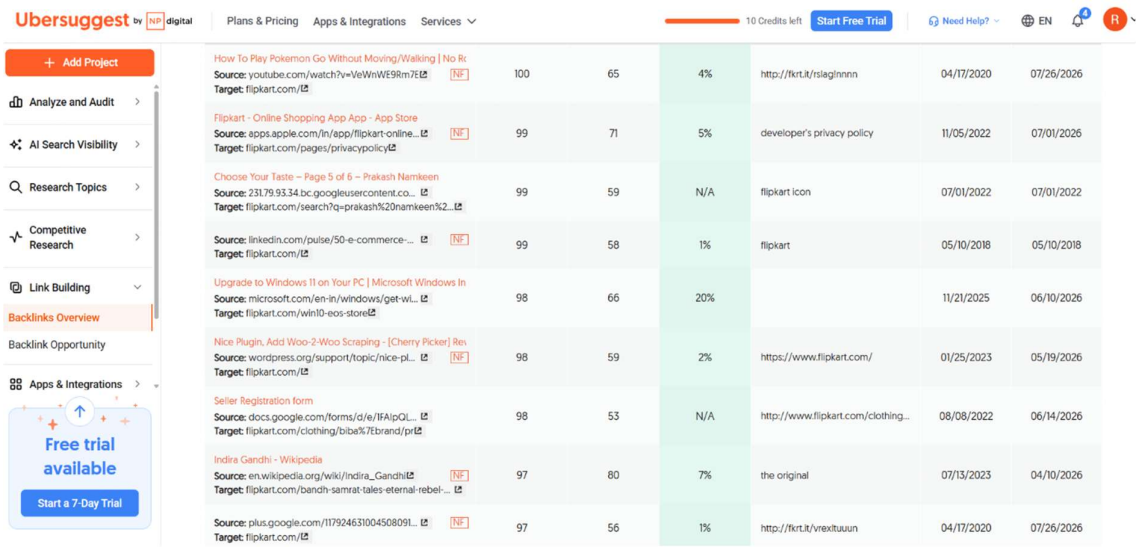

Q-2.

Choose a well-known e-commerce site (like Flipkart or Myntra), and identify 3 backlinks that look suspicious or low-quality using a backlink analysis tool.

**Explain why you think each one could be toxic.

Hint: Look for backlinks from unrelated, spammy, or foreign-language sites with low authority.**

Ans:

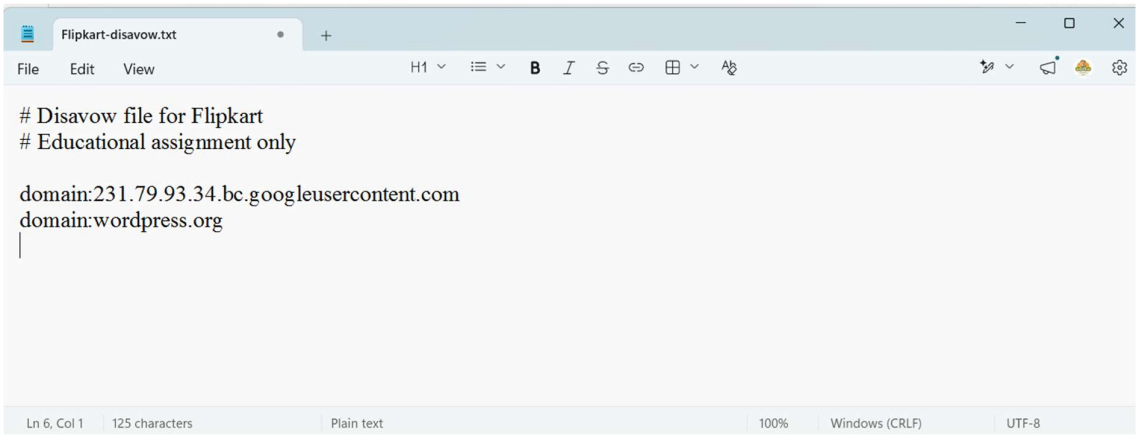

No.	Referring Domain / Source	Domain Score	Page Score	Why suspicious?
1	**youtube.com – "How To Play Pokemon Go Without Moving/Walking"**	100	65	Pokémon Goની unrelated page Flipkartને link કરે છે; contextually unrelated backlink છે.
2	**231.79.93.34.bc.googleusercontent.com – "Choose Your Taste – Page 5 of 6 – Prakash Namkeen"**	99	59	Unusual Googleusercontent source and the page/topic has unclear relevance to Flipkart.
3	**wordpress.org – "Nice Plugin, Add Woo-2-Woo Scraping…"**	98	59	The source is a WordPress plugin/support page and the connection to Flipkart is unclear; the backlink should be manually reviewed.

Q-3.

Use the Google Disavow Tool (or its simulation in a free SEO tool) to create a disavow file for the 2 most toxic backlinks you found for your chosen site. Write the exact text you would submit in the disavow file.

Ans:

Q-4.

Pick two competing apps (for example, BookMyShow vs Paytm Movies), and use a backlink gap analysis tool (like SEMrush Backlink Gap or Ubersuggest) to find 3 domains that link to one but not the other. List these domains and suggest why they might link to only one competitor.

Ans:

Competitors selected:

- BookMyShow — bookmyshow.com
- Paytm Movies — movies.paytm.com

A backlink-gap/Link Intersect analysis identifies websites linking to one competitor but not the other. Ahrefs describes this process as finding referring domains that link to competitors but not to the target website.

Example backlink-gap opportunities:

Domain	Links to	Why it may link only to that competitor
timesofindia.indiatimes.com	BookMyShow	Entertainment and movie-ticket articles may naturally reference BookMyShow.
indianexpress.com	BookMyShow	Movie reviews/news may mention BookMyShow ticket booking.
hindustantimes.com	BookMyShow	Entertainment coverage and ticket-booking content can generate brand references.

Suggested strategy

Paytm Movies could approach similar publishers with:

- Movie-ticket guides.
- New movie release articles.
- City-wise cinema guides.
- Movie/event partnerships.
- Entertainment news collaborations.
- Useful movie-booking resources.

Q-5.

Use ChatGPT to generate a step-by-step checklist for cleaning up a website's backlink profile, including identifying, evaluating, and removing toxic links. Paste the checklist and mention one thing you learned that you didn't know before.

Hint: Try prompts like 'Give me a detailed checklist for backlink cleanup for a website.'

Ans:

Step-by-step backlink cleanup checklist

- Export the complete backlink profile from Ahrefs, Semrush, or another backlink tool.
- Group backlinks by referring domain.
- Check the authority/DR of each referring domain.
- Check whether the linking website is relevant to the target website.
- Review the actual page containing the backlink.
- Check the anchor text for keyword stuffing.
- Identify links from obvious link farms or spam directories.

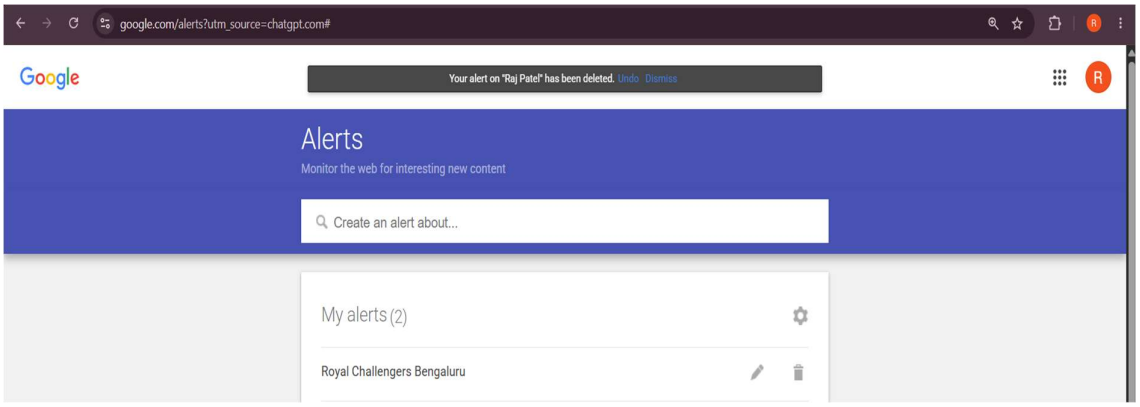

- Check for automatically generated or meaningless content.
- Identify suspicious foreign-language websites when they are unrelated to the business.
- Check whether the website has genuine organic traffic.
- Separate natural, low-quality, and clearly manipulative backlinks.
- Contact the website owner and request removal of clearly unwanted links where practical.
- Keep a record of removal requests and responses.
- Prepare a disavow file only for links that warrant disavowal after careful review.
- Use the domain: format when the entire referring domain is considered harmful.
- Upload the disavow file through Google's Disavow Tool when appropriate.
- Continue monitoring the backlink profile regularly.
- Recheck new backlinks after the cleanup.
- Avoid disavowing normal links merely because they have low DR.

Season-22

Q-1.

Set up a Google Alert for your favorite IPL team or a trending Bollywood movie and take a screenshot of the alert confirmation page.

Ans:

Q-2.

Find 3 recent online articles or blog posts that mention a popular Indian food delivery app (like Zomato or Swiggy) but do not link to its official website, and list their URLs.

Ans:

Trustpilot – Swiggy Reviews — Swiggy nu naam repeatedly mention thay chhe.
Open article/page

IJFMR research paper — paper ma Swiggy ane Zomato banne food-delivery apps tarike mention thay chhe.
Open article/page

Zoutons – Swiggy Coupons & Offers — Swiggy nu naam article ma mention chhe.
Open article/page

No.	Website	Brand Mention	URL
1	Trustpilot	Swiggy	https://uk.trustpilot.com/review/swiggy.com
2	IJFMR	Swiggy	https://www.ijfmr.com/research-paper.php?id=83970
3	Zoutons	Swiggy	https://zoutons.com/swiggy-coupons

Q-3.

Use the free version of the Mention tool (https://mention.com/en/) or BrandMentions (https://brandmentions.com/) to track brand mentions for a well-known smartphone brand in India (such as OnePlus or Realme) and submit a screenshot showing at least one mention found.

Ans:

Q-4.

Write a short email template you could send to a website owner, requesting them to convert an unlinked mention of your favorite music app (like Spotify or Gaana) into a clickable link to the app's official site.

Ans:

Subject: Could You Add a Link to Spotify?

Hi Rahul,

I noticed that your article mentions Spotify, but the mention doesn't currently include a clickable link. Would you consider linking the Spotify mention to the official Spotify website?

It would make it easier for your readers to discover Spotify directly.

Thank you for considering my request!

Best regards,
Raj

Q-5.

Use ChatGPT to generate a list of 3 creative digital PR strategies for increasing brand mentions for a new fashion e-commerce startup targeting Gen Z in India.

Hint: Ask ChatGPT to focus on social media collaborations, influencer outreach, and viral challenges.

Ans:

3 Creative Digital PR Strategies for a Gen Z Fashion E-Commerce Startup:

1. Social Media Collaboration Campaign

Partner with popular Instagram and TikTok creators who have a Gen Z audience. Create short styling videos such as “3 Ways to Style One Outfit” or “Under ₹999 Gen Z Looks.” Encourage creators to tag the startup and use a unique campaign hashtag. This can increase social mentions, shares, website traffic, and brand awareness.

2. Gen Z Influencer Outreach

Build relationships with micro-influencers, college fashion creators, and emerging lifestyle influencers in India. Send them selected products and ask them to create authentic outfit reviews, unboxing videos, and styling content. Micro-influencers can help the brand reach niche communities and generate genuine conversations around the products.

3. Viral Fashion Challenge

Launch a creative challenge such as **#MyStyleMyWay Challenge**, where users create their own outfit combinations and post them on Instagram or other social platforms. Offer attractive rewards such as discount vouchers, free products, or a chance to be featured on the brand's official account. Encourage participants to tag friends and the brand, helping the challenge generate more user-generated content and online brand mentions.

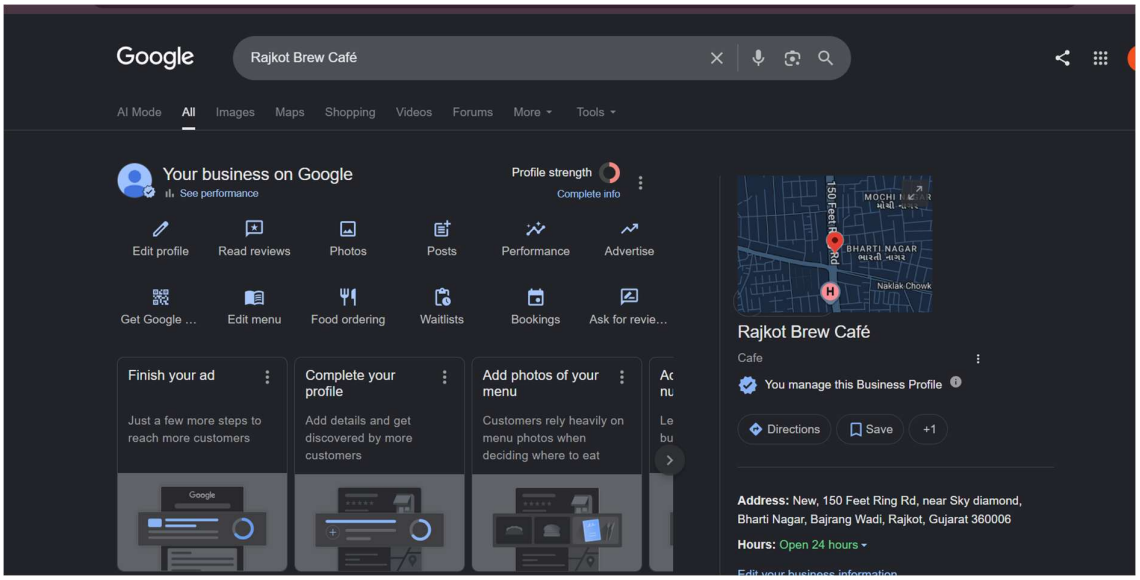

Season-23

Q-1.

Create a Google Business Profile for a fictional local café in your city, filling out business name, address, phone number, hours, and at least one photo. Take a screenshot of the completed profile page.

Ans:

https://share.google/Mr0lM42cKQc6m5RS0

Q-2.

**List the NAP (Name, Address, Phone) details for 3 popular restaurants in your area as shown on Google Maps, Zomato, and their official website. Identify any inconsistencies between the platforms.

Hint: Consistent NAP across platforms helps improve local SEO ranking.**

Ans:

1. Pizza Hut – Raiya Chowk:

Platform	Name	Address	Phone
Google Maps	Pizza Hut – Raiya Chowk	No. 13 & 14, Ground Floor, Westgate 1 Building, 150 Feet Ring Road, Raiya Chowk, Rajkot	+9189760 83328
Zomato	Pizza Hut	Same/near Raiya Chowk location	+9189760 83328
Official Website	Pizza Hut – Raiya Chowk	No. 13 & 14, Ground Floor, Westgate 1 Building, 150 Feet Ring Road, Raiya Chowk, Rajkot	+9189760 83328

2. Suryakant Restaurant & Café:

Platform	Name	Address	Phone
Google Maps	Suryakant Restaurant & Cafe	1, Chandra Park Main Road, Near Big Bazar, 150 Feet Ring Road, Rajkot	+91 89589 70570
Zomato	Suryakant Restaurant & Cafe	1, Chandra Park Main Road, Near Big Bazar, 150 Feet Ring Road, Rajkot	+91 89589 70570
Official Website	No verified official website found	—	—

3. Ramanam - South Indian Restaurant:

Platform	Name	Address	Phone
Google Maps	Ramanam - South Indian Restaurant	Shop No. - 2,3,4 Goldwings Cinema, 2nd Ring Road, Circle, opp. Satadhar Petroleum, near Munjaka, Munjka, Rajkot, Gujarat 360005	+91 89809 02548
Zomato	No verified in zomato	—	—
Official Website	Ramanam.in	Shop No. - 2,3,4 Goldwings Cinema, 2nd Ring Road, Circle, opp. Satadhar Petroleum, near Munjaka, Munjka, Rajkot, Gujarat 360005	+91 89809 02548

Q-3.

Find and record 5 local citation websites (like Justdial, Sulekha, IndiaMart, Yellow Pages, etc.) where a local business can submit its details for better local SEO. For each, note what business information is required to submit.

Ans:

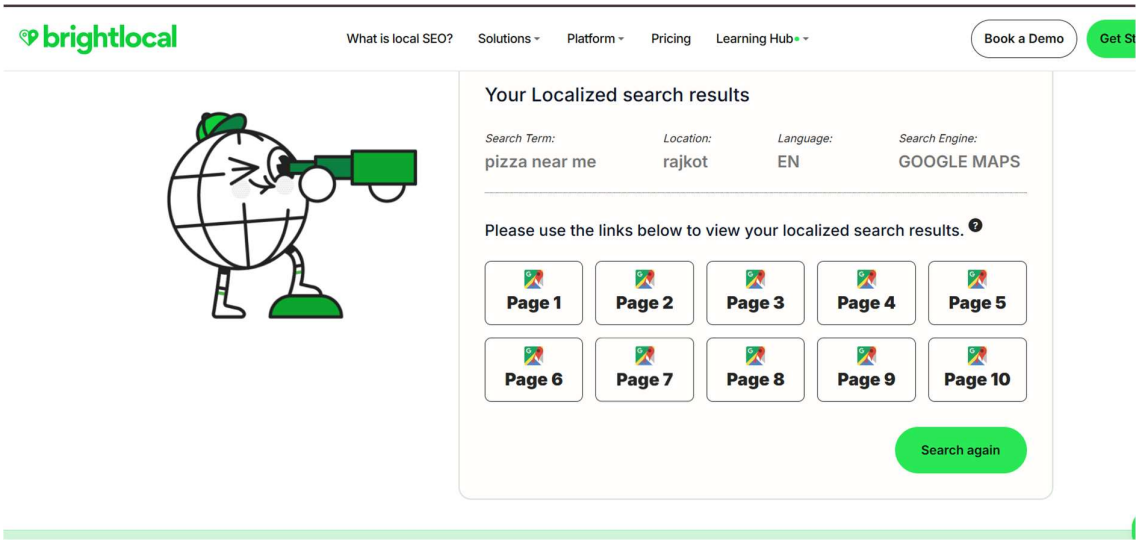

No.	Citation Website	Business Information Required
1	**Justdial**	Business name, category, address/location, phone, services, business description, photos
2	**Sulekha**	Mobile number, business name, city, service area, category/sub-category, services, description, photos/KYC
3	**IndiaMART**	Business/company name, products/services, contact details, location, business profile
4	**YellowPages.in**	Business name, category, phone, email, address, city
5	**Foursquare**	Business name, location, contact information, hours, website and other business details

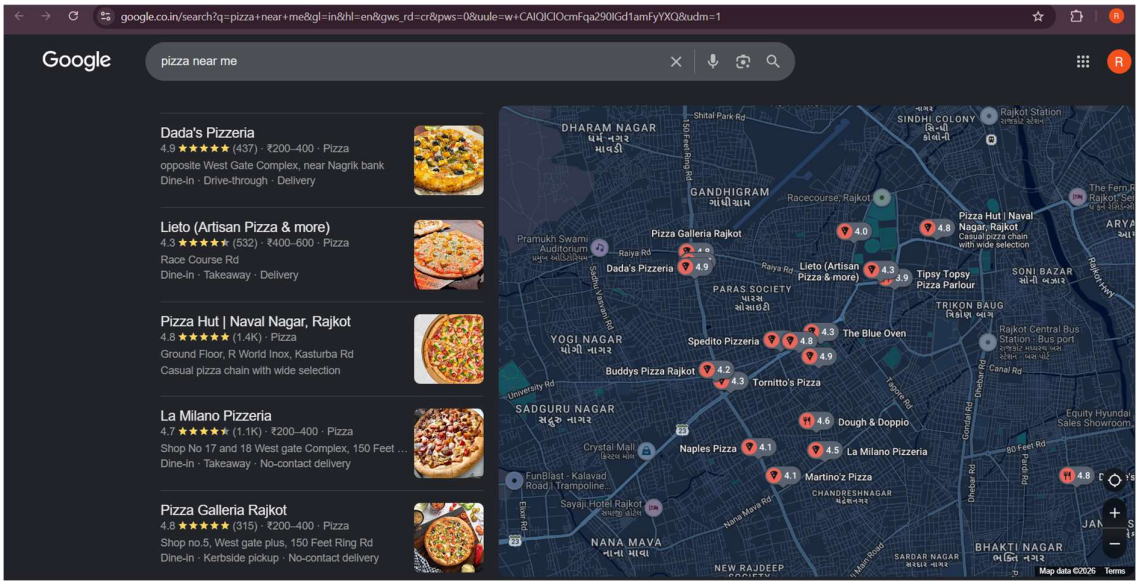

Q-4.

**Pick a local business (not a hospital or library) and use a free local rank tracking tool (such as BrightLocal's Local Search Results Checker or Whitespark's Local Rank Tracker demo) to check its ranking for the keyword 'pizza near me' in your city. Write down the business's position and the date you checked.

Hint: Many tools offer a free trial or demo mode—no need to pay.**

Ans:

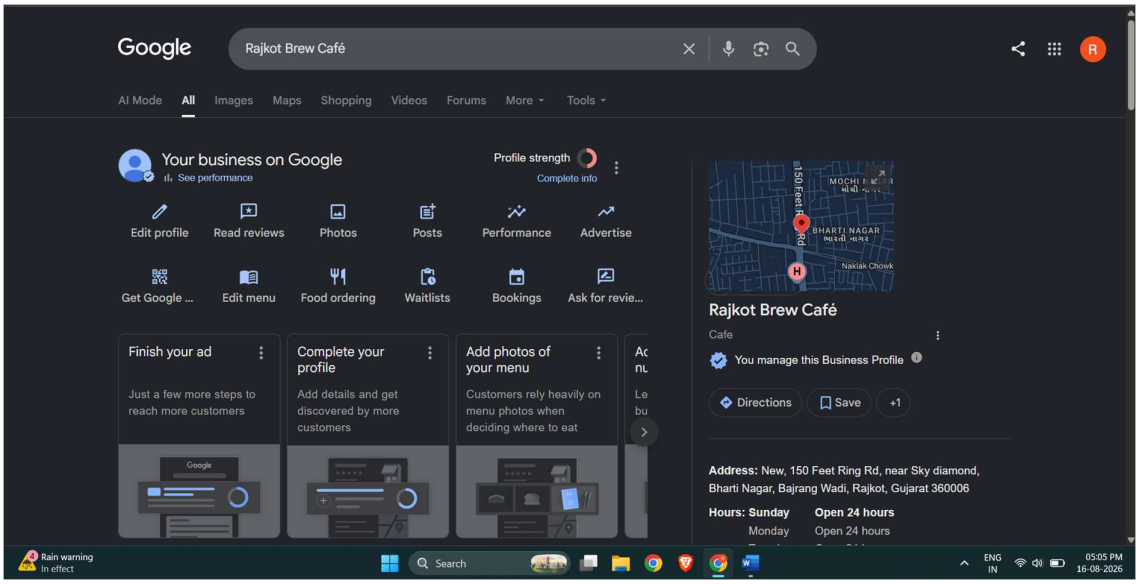

Note: There are multiple pages in BrightLocal's Local Search Results Checker. This is first pages Screenshot.

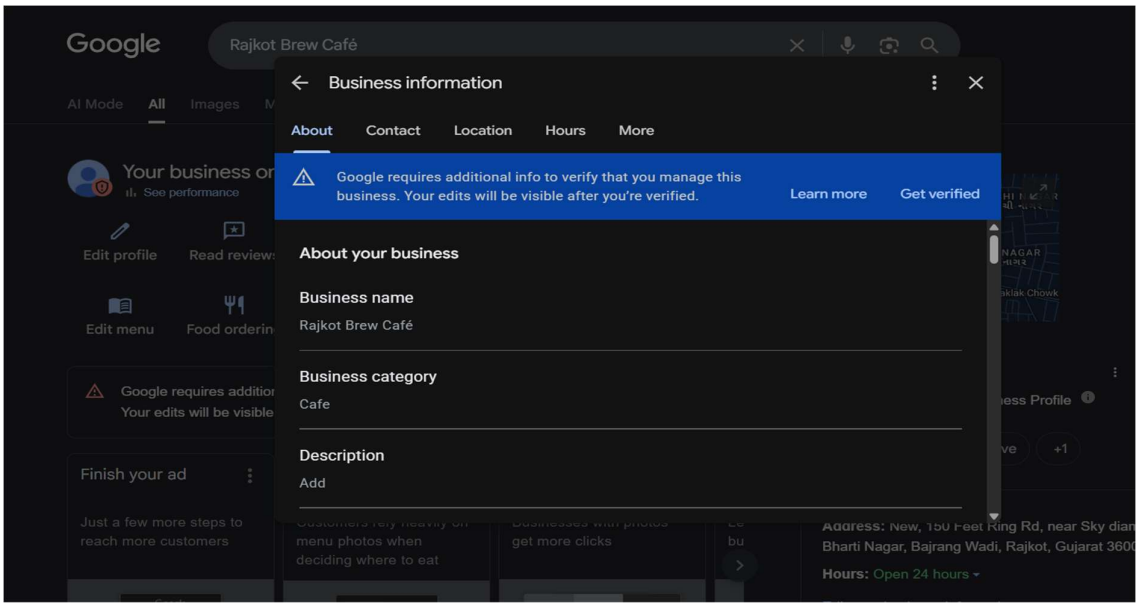

Season-24

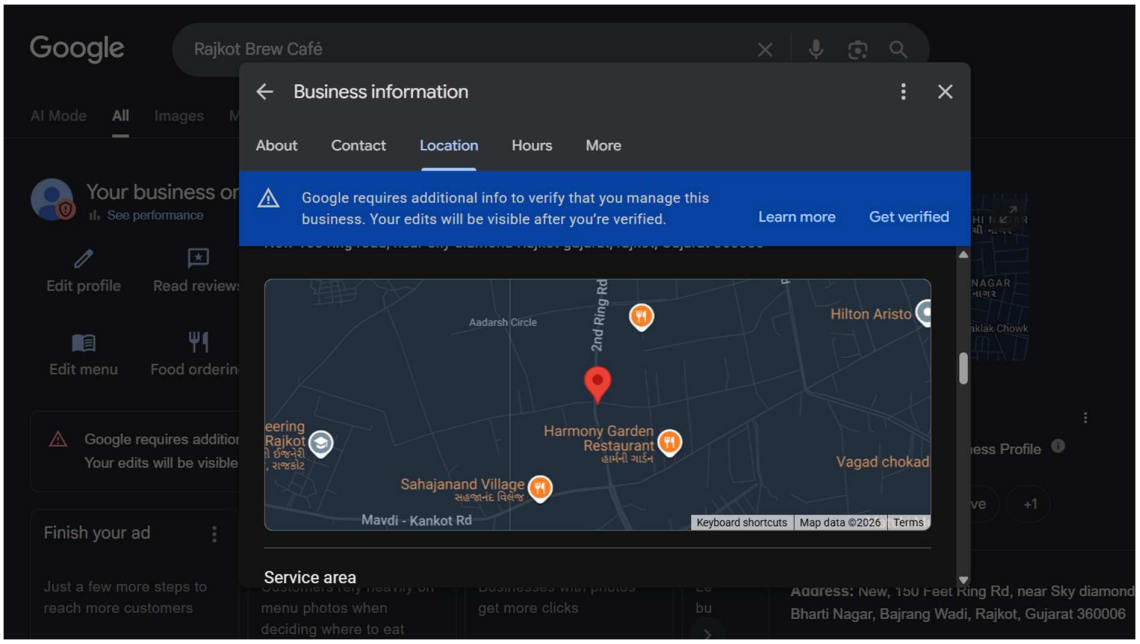

Q-1.

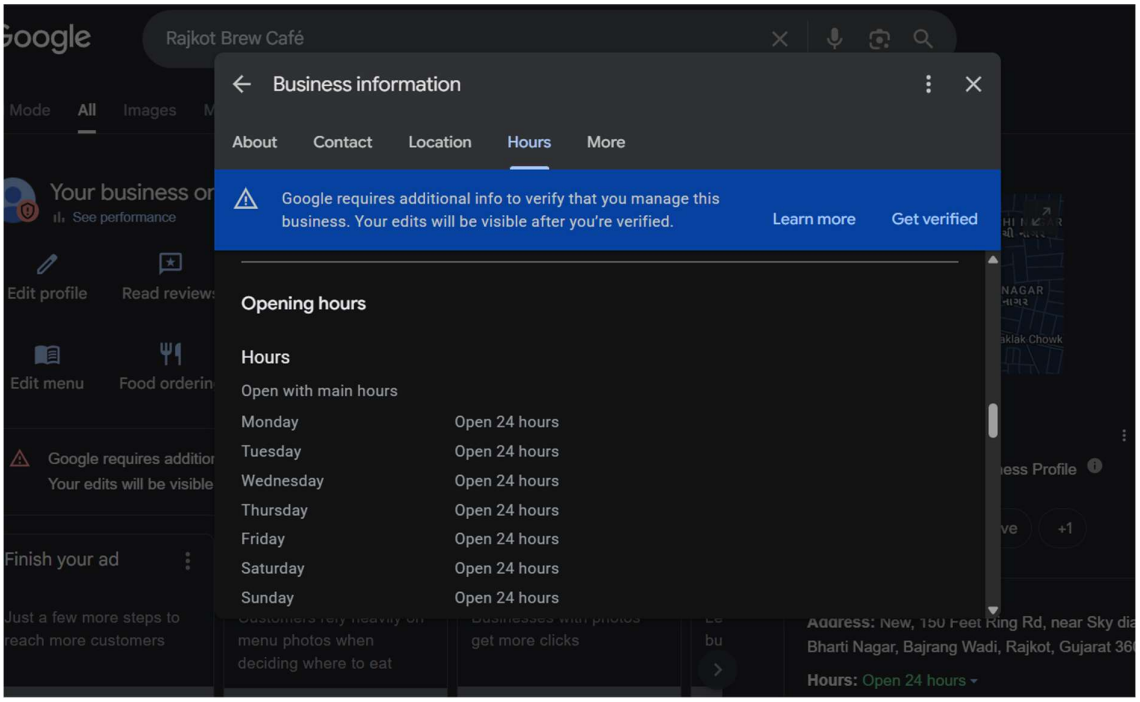

Create a Google Business Profile for a fictional local café or clothing store and fill out all profile sections, including business name, address, hours, category, description, and at least 3 photos.

Ans:

Q-2.

Write and schedule two Google Business Profile Posts for your fictional business: one promoting a new product or menu item, and one announcing a

**special event or discount.

Hint: Use clear call-to-action phrases like 'Visit us today' or 'Book now!'**

Ans:

Post 1 – New Product:

☕ New Chocolate Mocha Now Available!

Try our delicious new Chocolate Mocha, made with rich chocolate, freshly brewed coffee, and creamy milk. Perfect for your coffee break!

👉 Visit us today and try it!

📍 Raj Café & Coffee House, New 150 Ring Road Rajkot

Post 1 – New Product:

🎉 Weekend Special Offer!

Enjoy 20% OFF on all coffee and sandwiches every Saturday and Sunday at Raj Café & Coffee House.

🗓️ Offer valid this weekend only.

👉 Visit us today and enjoy your favourite food at a special price!

Q-3.

Simulate managing customer reviews by writing two sample positive reviews and one negative review for your business, then draft appropriate public responses for each review.

Ans:

Positive Review 1:

⭐ ⭐ ⭐ ⭐ ⭐

“Really enjoyed my visit to Rajkot Brew Café. The coffee was fresh, the food was delicious, and the staff was very friendly. The café atmosphere was also comfortable. Highly recommended!”

Public Response:

Thank you so much for your wonderful review! We are happy to know that you enjoyed our coffee, food, and service. We look forward to welcoming you again soon!

Positive Review 2:

⭐⭐⭐⭐⭐

“Great place to spend time with friends. I loved the sandwiches and cold coffee. The service was quick and the staff was polite. I will definitely visit again.”

Public Response:

Thank you for your kind words! We are glad you enjoyed our sandwiches, cold coffee, and service. We really appreciate your support and hope to see you again soon!

Negative Review:

⭐⭐

“I visited the café recently, but my order took too long to arrive. I was disappointed with the waiting time.”

Public Response:

We are sorry to hear about your experience and apologize for the delay in your order. We are working to improve our service and reduce waiting times. Thank you for sharing your feedback; we hope to provide you with a better experience next time.

Q-4.

Add three common customer questions to the Q&A section of your Google Business Profile (for example: 'Do you offer home delivery?', 'Is parking available?', 'Are you open on Sundays?') and provide clear, helpful answers for each.

Ans:

Question 1

Q: Do you offer home delivery?

A: Yes, we offer home delivery within selected areas of Ahmedabad. Customers can contact us to check delivery availability.

Question 2

Q: Is parking available?

A: Yes, limited parking is available near the café. Customers can also find nearby public parking facilities.

Question 3

Q: Are you open on Sundays?

A: Yes, we are open every Sunday from **9:00 AM to 10:00 PM**.

Q-5.

Analyze the Google Business Profile Insights for your fictional business (use the demo data provided in class or screenshots from a real profile online) and list three actions you would take to increase profile views or customer engagement based on the data.

Ans:

Metric	**Example Data**
Profile Views	1,200
Search Views	850
Maps Views	350
Website Clicks	45
Phone Calls	30
Direction Requests	25

Three actions to increase views and engagement:

1. Add more photos and posts
The business should regularly upload high-quality photos of food, café interiors, offers, and new products to attract more customers.

2. Encourage customer reviews
Ask satisfied customers to leave genuine reviews. More positive reviews can improve customer trust and engagement.

3. Promote special offers and use CTAs
Create regular GBP Posts with discounts, new menu items, and events using CTAs such as **"Visit us today," "Call now,"** and **"Get directions."**

Season-25

Q-1.

Create a Google Sheet listing 5 popular local businesses in your city (restaurants, salons, gyms, etc.), and for each, find and record their NAP (Name, Address, Phone) details as shown on Justdial and Sulekha.

Ans:

https://docs.google.com/spreadsheets/d/1FU3EWgVchGriZKyiPKFTBB9-4nwpkOeZJp5No7Crdgc/edit?usp=sharing

Q-2.

**Pick any one business from your list and check its NAP details on at least 3 Indian citation sites (Justdial, Sulekha, IndiaMART, Yellow Pages, etc.). Note any inconsistencies in name, address, or phone number between the sites.

Hint: Look for small differences like abbreviations, missing digits, or address format changes.**

Ans:

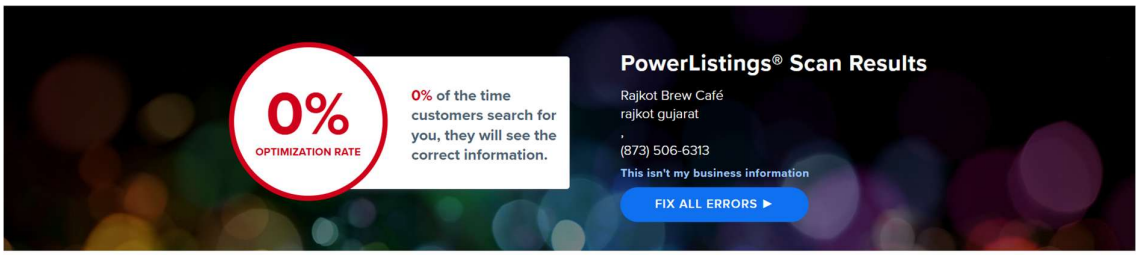

Business: The Great Punjabi Dhaba

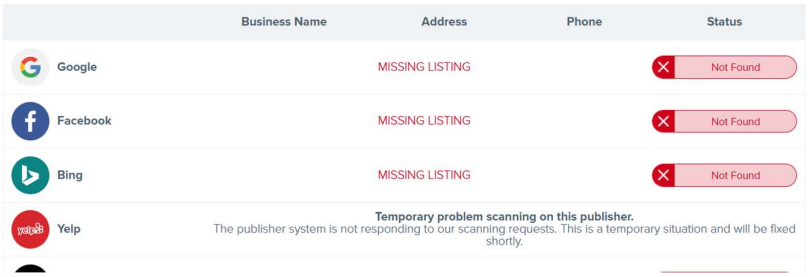

Citation Site	Name	Address	Phone	Difference
Justdial	The Great Punjabi Dhaba	Near Iskon Temple, Opposite Rasala Restaurant, Samina Park, Rajkot-360005, Gujarat	79426 88363	—
Sulekha	The Great Punjabi Dhaba	-	-	-
Google Maps	The Great Punjabi Dhaba	Near Iskon Temple, Opposite Rasala Restaurant, Samina Park, Rajkot-360005, Gujarat	79426 88363	Compare phone/address

Q-3.

Use a free online citation consistency checker tool (like Moz Local or BrightLocal) to analyze a business's NAP consistency, and take a screenshot of the results.

Ans:

Q-4.

Imagine you are helping a new food delivery startup (like Zomato) improve its local SEO. Suggest 3 specific citation sites (India-focused) where they should create or update their business listing, and explain why each site is important.

Ans:

1. Justdial

Justdial is a popular Indian local business directory. A food delivery startup can create a business listing with its name, address, phone number and services. This can improve local business visibility.

2. Sulekha

Sulekha is another Indian local business directory. Maintaining an accurate listing can help customers discover the business and can support local SEO efforts.

3. IndiaMART

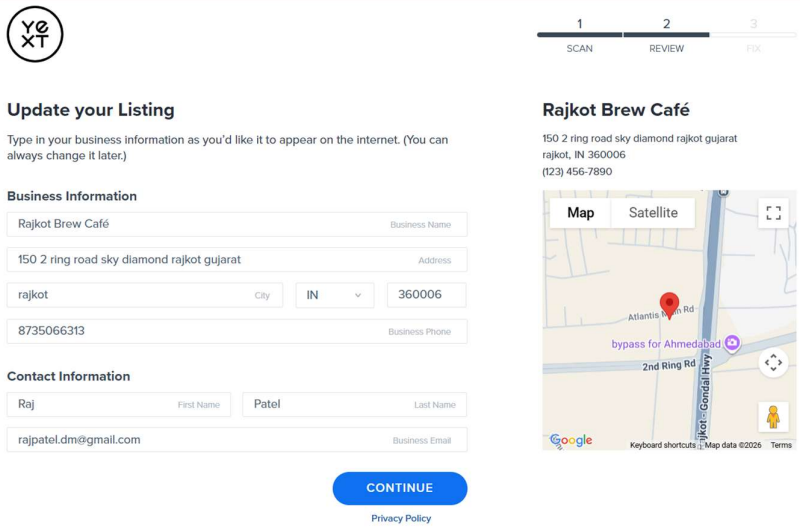

IndiaMART is a major Indian business directory and marketplace. Creating a business profile can strengthen the startup's online business presence and help it become more discoverable.

Q-5.

Try out a citation building tool (such as Yext, Synup, or BrightLocal demo) and describe the step-by-step process you followed to submit or update a business listing.

Hint: If you can't submit a real business, use a fictional one for practice.

Ans:

Season-26

Q-1.

Pick a product page from an Indian e-commerce site you use (like Flipkart or Myntra) and list 5 SEO elements present on that page (such as title tag, meta description, product schema, reviews, internal links, etc.).

Ans:

Example: Flipkart product page — Men's Watch

Title tag:

Fastrack Stunners X Analog Watch - For Men - Buy Fastrack Stunners X Analog Watch - For Men 38163NL01,NU38163NL01 Online at Best Prices in India | Flipkart.com

Meta description:

<meta name="Description" content="Fastrack Stunners X Analog Watch - For Men - Buy Fastrack Stunners X Analog Watch - For Men 38163NL01,NU38163NL01 Online at Rs.2495 in India Only at Flipkart.com. Water Resistant - Great Discounts, Only Genuine Products, 30 Day Replacement Guarantee, Free Shipping. Cash On Delivery!">

Product Schema & Rating, Review:

```
{
 "@context": "https://schema.org",
 "@type": "Product",
 "name": "Fastrack Stunners X Analog Watch for Men",
 "image": "https://rukmini1.flixcart.com/image/1500/1500/xif0q/watch/h/m/i/-watermarked-original-imahfmp3gzjhsamg.jpeg?q=70",
 "description": "Fastrack Stunners X Analog Watch for Men with stylish design and durable metal build.",
 "sku": "WATH9EGYZXHBXPHF",
 "brand": {
  "@type": "Brand",
  "name": "Fastrack"
 },
 "offers": {
  "@type": "Offer",
```

```
  "price": "2494",
  "priceCurrency": "INR",
  "availability": "https://schema.org/InStock"
 },
 "aggregateRating": {
  "@type": "AggregateRating",
  "ratingValue": "4.4",
  "reviewCount": "35"
 }
}
```

Q-2.

**Write optimized title and meta description tags for a new Zomato-style restaurant product page selling 'Paneer Tikka Pizza', making sure to include relevant keywords and a call to action.

Hint: Think about what a hungry user might search for and what would make them click.**

Ans:

Title Tag:

Paneer Tikka Pizza Online | Order Delicious Pizza

Meta Description:

Order delicious Paneer Tikka Pizza online with spicy paneer, fresh toppings and cheesy goodness. Get your favorite pizza delivered today!

Target keywords:
Paneer Tikka Pizza, Paneer Pizza, order pizza online, pizza delivery

3.

Create a sample HTML snippet for a category page (like 'Men's Sneakers' on Myntra) that includes an H1, a short SEO-friendly intro paragraph, and at least 3 internal links to related categories.

Ans:

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>Men's Sneakers Online | Stylish Sneakers</title>
  <meta name="description"
    content="Shop men's sneakers online in stylish designs for casual, sports and everyday wear. Explore the latest sneaker collections.">
</head>
<body>
  <h1>Men's Sneakers</h1>
  <p>
    Explore our collection of men's sneakers featuring stylish,
    comfortable and trendy designs for casual, sports and everyday wear.
    Find the perfect pair for your style.
  </p>
  <h2>Explore Related Categories</h2>
  <ul>
    <li><a href="/mens-running-shoes">Men's Running Shoes</a></li>
    <li><a href="/mens-casual-shoes">Men's Casual Shoes</a></li>
    <li><a href="/mens-sports-shoes">Men's Sports Shoes</a></li>
  </ul>
</body>
</html>
```

4.

Explain with a short example how faceted navigation (like filters for brand, price, color on Flipkart) can create SEO problems such as duplicate content or crawl traps.

Ans:

Faceted navigation means allowing users to filter products by options such as **brand, price, color, size, and rating**.

Example:
A website may have:

/mens-shoes

After applying filters, it could create URLs such as:

/mens-shoes?brand=nike
/mens-shoes?brand=nike&color=black
/mens-shoes?brand=nike&color=black&size=9

This can create **duplicate or very similar pages** that search engines may crawl and index unnecessarily.

It can also create a **crawl trap**, where Googlebot follows thousands of combinations of filters and spends its crawl resources on low-value URLs instead of important pages.

Q-5.

Suggest two practical solutions to avoid SEO issues caused by faceted navigation in an e-commerce site, and briefly describe how each solution works.

Hint: Consider using noindex tags, canonical URLs, or blocking certain parameters in robots.txt.

Ans:

1. Use Canonical Tags / Noindex

- Use a **canonical tag** to tell search engines which URL is the main preferred version.
- Use **noindex** for filter pages that do not provide unique SEO value.
- Example: Keep /mens-shoes as the main indexable page while preventing unnecessary filter combinations from appearing in search results.

2. Control Crawling with Robots.txt

- Block selected parameter-based URLs that do not need to be crawled.
- For example, unnecessary filter parameters such as ?color=, ?size=, or combinations of multiple filters can be restricted.
- This helps search-engine crawlers focus on important category and product pages.

Note: robots.txt prevents crawling but does **not** reliably guarantee that a URL will never appear in Google's index. For indexing control, noindex is generally more appropriate when Google can crawl the page.

Season-27

Q-1.

Identify two duplicate product description pages on any e-commerce site (like Flipkart or Myntra), then write a short note on how duplicate content can harm SEO for those pages.

Ans:

Example e-commerce site: Flipkart

Suppose two product URLs have almost the same product description:

- **Page 1:** https://www.flipkart.com/product-a/p/12345
- **Page 2:** https://www.flipkart.com/product-a?color=black

Both pages may contain the same product title, description, specifications, and images.

How duplicate content can harm SEO:

- Search engines may have difficulty deciding which page should rank.
- Ranking signals and backlinks may get divided between duplicate URLs.
- The preferred page may not always be indexed or ranked.
- It can reduce the overall SEO performance of the product pages.
- It may waste Google's crawling resources.

Q-2.

**Add a canonical tag to the <head> section of a sample product page HTML file (product.html) to specify the preferred URL, and explain why this tag is important for SEO.

Hint: Use <link rel="canonical" href="..."> with the correct URL.**

Ans:

```
<!DOCTYPE HTML>

<HTML>

<HEAD>

  <TITLE>SMARTPHONE PRODUCT PAGE</TITLE>
```

```
  <link rel="canonical" href="https://www.example.com/products/smartphone">
</head>
<body>
  <h1>Latest Smartphone</h1>
  <p>Buy the latest smartphone online.</p>
</body>
</html>
```

Why is the canonical tag important for SEO?

The canonical tag tells search engines **which URL is the preferred or main version of a page** when multiple URLs have similar or duplicate content.

For example, if these URLs show the same product:

- /products/smartphone
- /products/smartphone?color=black
- /products/smartphone?size=128gb

the canonical tag can specify:

https://www.example.com/products/smartphone

Q-3.

Given a set of 5 paginated URLs for a category (e.g., /shoes?page=1 to /shoes?page=5), write the correct rel="prev" and rel="next" link tags for page 3 and explain how they help search engines understand pagination.

Ans:

Given these category URLs:

- **/shoes?page=1**
- **/shoes?page=2**
- **/shoes?page=3**
- **/shoes?page=4**
- **/shoes?page=5**

For Page 3, the previous page is Page 2 and the next page is Page 4.

Add these tags inside the <head>:

```
<HEAD>
  <LINK REL="PREV" HREF="HTTPS://WWW.EXAMPLE.COM/SHOES?PAGE=2">
  <LINK REL="NEXT" HREF="HTTPS://WWW.EXAMPLE.COM/SHOES?PAGE=4">
</HEAD>
```

How do they help?

- **rel="prev" identifies the previous page in the sequence.**
- **rel="next" identifies the next page.**
- **They help communicate the relationship between paginated pages.**
- **This makes the pagination structure easier for search engines to understand.**

Note: Google no longer uses rel="prev" and rel="next" as an indexing/ranking signal, but these links can still be useful for clearly expressing page relationships and for user navigation.

Q-4.

Implement review schema markup using JSON-LD for a single product (e.g., a smartphone) and include fields like name, reviewRating, author, and reviewBody.

Hint: Use schema.org's Product and Review types in your JSON-LD.

Ans:

```
<SCRIPT TYPE="APPLICATION/LD+JSON">
{
 "@CONTEXT": "HTTPS://SCHEMA.ORG",
 "@TYPE": "PRODUCT",
 "NAME": "EXAMPLE SMARTPHONE",
 "REVIEW": {
  "@TYPE": "REVIEW",
  "AUTHOR": {
   "@TYPE": "PERSON",
   "NAME": "RAJ PATEL"
  },
```

```
  "reviewRating": {
    "@type": "Rating",
    "ratingValue": "5",
    "bestRating": "5",
    "worstRating": "1"
  },
  "reviewBody": "This smartphone has excellent performance, a good camera, and long battery life."
 }
}
</script>
```

Important fields:

- **Product:** Identifies the product.
- **name:** Product name.
- **Review:** Identifies the customer review.
- **author:** Person who wrote the review.
- **reviewRating:** Rating given by the customer.
- **reviewBody:** Actual review text.

SEO benefit: Structured data helps search engines understand product and review information and may make eligible pages more suitable for enhanced search results.

Q-5.

For a product available in India and UAE, write the hreflang tags you would add in the HTML to target both regions and languages (hi-IN for Hindi India, en-AE for English UAE).

Ans:

```
<head>
  <link rel="alternate"
    hreflang="hi-IN"
    href="https://www.example.com/in/product">
```

```
  <link rel="alternate"
      hreflang="en-AE"
      href="https://www.example.com/ae/product">
</head>
```

Explanation:

Hreflang	Target	URL
hi-IN	Hindi users in India	/in/product
en-AE	English users in UAE	/ae/product

Why is hreflang important?

Hreflang tells search engines which version of a page is intended for a particular **language and region**. This helps show the appropriate version to users in India and UAE and reduces the chance of the wrong regional/language version appearing in search results.

Season-28

Q-1.

Use your browser's developer tools to visit any page on Myntra and list the HTTP status code and two key response headers returned for the main document request.

Ans:

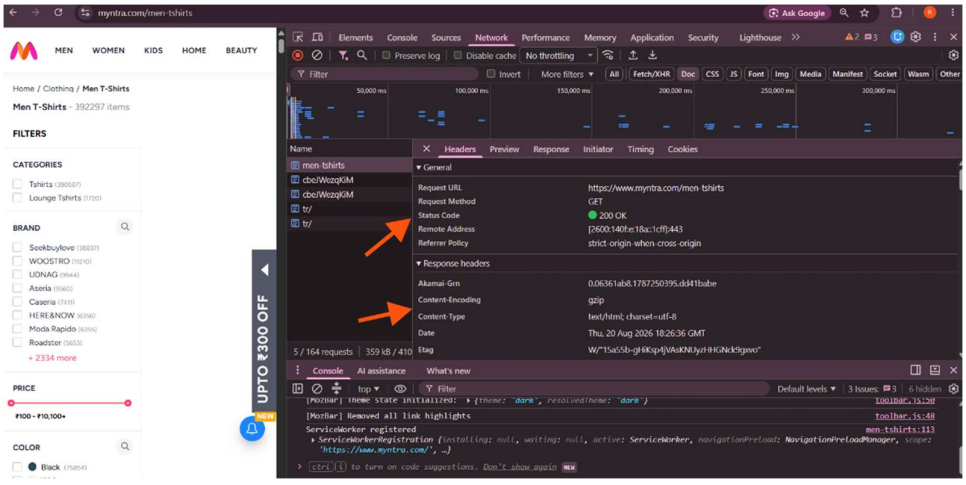

I opened the Myntra Men T-Shirts page and used Chrome Developer Tools → Network → Doc. I selected the main document request (men-tshirts). The HTTP status code returned was 200 OK.

Two key response headers were:

1. **Content-Encoding: gzip**
2. **Content-Type: text/html; charset=utf-8**

The 200 OK status code means that the webpage was successfully requested and delivered by the server.

Item	Result
Website	Myntra
Request Type	Document
HTTP Status Code	200 OK
Header 1	content-type: text/html; charset=UTF-8
Header 2	cache-control

Q-2.

**Create a simple HTML file and set up a 301 redirect to another page using an .htaccess file or server configuration on localhost.

Hint: Use 'Redirect 301 /oldpage.html /newpage.html' in your .htaccess if using Apache.**

Ans:

oldpage.html:

```
<!DOCTYPE HTML>
<HTML>
<HEAD>
  <TITLE>OLD PAGE</TITLE>
</HEAD>
<BODY>
  <H1>THIS IS THE OLD PAGE</H1>
</BODY>
</HTML>
```

newpage.html:

```
<!DOCTYPE HTML>
<HTML>
<HEAD>
  <TITLE>NEW PAGE</TITLE>
</HEAD>
<BODY>
  <H1>THIS IS THE NEW PAGE</H1>
</BODY>
</HTML>
```

Then create a file named .htaccess in the same Apache directory:

```
Redirect 301 /oldpage.html /newpage.html
```

Now open:

http://localhost/oldpage.html

The browser should automatically redirect to:

http://localhost/newpage.html

Explanation:
A **301 redirect** means that the requested page has been **permanently moved** to another URL. It is useful for SEO because it tells search engines that the old URL should be replaced by the new URL.

Q-3.

Simulate a redirect loop by creating two HTML files that each redirect to the other using meta refresh tags, then describe what happens in your browser and which HTTP status code (if any) you observe.

Ans:

page1.html:

```
<!DOCTYPE HTML>
<HTML>
<HEAD>
  <META HTTP-EQUIV="REFRESH" CONTENT="0; URL=PAGE2.HTML">
  <TITLE>PAGE 1</TITLE>
</HEAD>
<BODY>
  <H1>PAGE 1</H1>
</BODY>
</HTML>
```

page2.html:

```
<!DOCTYPE HTML>
<HTML>
<HEAD>
  <META HTTP-EQUIV="REFRESH" CONTENT="0; URL=PAGE1.HTML">
  <TITLE>PAGE 2</TITLE>
</HEAD>
<BODY>
```

```
  <H1>PAGE 2</H1>
</BODY>
</HTML>
```

What happens?

When I open page1.html, it redirects to page2.html. Then page2.html redirects back to page1.html. This continues repeatedly and creates a **redirect loop**.

The browser may eventually stop loading the pages and show an error such as:

"Too many redirects" or **"This page isn't working."**

HTTP status code

A **meta refresh is not an HTTP redirect**. Therefore, the HTML pages themselves can still return:

200 OK

There may be **no 301 or 302 status code** for the meta-refresh navigation because the redirect is performed by the browser after receiving the HTML document.

SEO impact:
Redirect loops prevent users and search engines from reaching the final page and can cause crawling/indexing problems.

Q-4.

Pick any broken link from a real website (for example, a non-existent product on Flipkart) and note the exact HTTP status code shown. Explain the difference between 404 and 410 status codes in your own words.

Ans:

For a broken/non-existent webpage, the commonly returned status is:

HTTP Status Code: 404 Not Found

You can verify this yourself by opening a deliberately non-existent URL on a real website and checking **F12 → Network → document → Status Code**.

Difference between 404 and 410:

Status Code	Meaning
404 Not Found	The requested page cannot currently be found. It may be missing, deleted, or the URL may be incorrect.
410 Gone	The page has been permanently removed and the server is specifically saying that the resource is no longer available.

In simple words:

- **404:** "I can't find this page."
- **410:** "This page is gone permanently."

For SEO, both indicate that the requested URL does not provide a usable page, but **410 gives a stronger signal that the content was intentionally and permanently removed**.

Q-5.

Sign up for a free Cloudflare account and add any personal or test domain (or use Cloudflare's playground if you don't have a domain). List three features Cloudflare provides for improving website performance or security.

Ans:

Three important Cloudflare features:

1. CDN (Content Delivery Network)
Cloudflare caches and delivers website content from its global network, helping reduce latency and improve page-loading performance.

2. DDoS Protection
Cloudflare automatically detects and mitigates Distributed Denial-of-Service attacks, helping keep websites available during malicious traffic spikes.

3. SSL/TLS / HTTPS
Cloudflare provides Universal SSL certificates that encrypt traffic between visitors and the website, helping protect data from interception and tampering.

Season-29

Q-1.

**Create a robots.txt file that allows only Googlebot and Bingbot to crawl your site, but blocks all major AI bots for 2026 (GPTBot, ClaudeBot, OAI-SearchBot, PerplexityBot) from accessing any pages.

Hint: Use the User-agent directive for each bot and the Disallow rule.**

Ans:

```
# Allow Googlebot
User-agent: Googlebot
Disallow:
# Allow Bingbot
User-agent: Bingbot
Disallow:
# Block GPTBot
User-agent: GPTBot
Disallow: /
# Block ClaudeBot
User-agent: ClaudeBot
Disallow: /
# Block OAI-SearchBot
User-agent: OAI-SearchBot
Disallow: /
# Block PerplexityBot
User-agent: PerplexityBot
Disallow: /
```

Explanation:

- User-agent: Googlebot + Disallow: means Googlebot can crawl the site.
- User-agent: Bingbot + Disallow: means Bingbot can crawl the site.
- Disallow: / blocks the specified AI bot from the entire website.

Important: If the goal is literally to allow **only** Googlebot and Bingbot, you should also add a catch-all rule:

User-agent: *

Disallow: /

Q-2.

Add a wildcard rule in robots.txt to block all bots from accessing any URL that contains '/private/' anywhere in the path, but allow access to all other pages.

Ans:

For this requirement:

User-agent: *

Disallow: */private/

Explanation:

- User-agent: * applies the rule to all crawlers.
- Disallow: */private/ blocks paths containing /private/.
- Other URLs remain accessible.

Example:

https://example.com/private/page.html

https://example.com/products/private/details

These would be blocked, while:

https://example.com/

https://example.com/products/

https://example.com/about/

Q-3.

Configure robots.txt for a Shopify store so that only user bots (like browsers and real users) can access the '/shop' section, while search bots and AI bots

**are blocked from that section.

Hint: Identify the User-agent strings for common search and AI bots.**

Ans:

Block Google

User-agent: Googlebot

Disallow: /shop

Block Bing

User-agent: Bingbot

Disallow: /shop

Block GPTBot

User-agent: GPTBot

Disallow: /shop

Block ClaudeBot

User-agent: ClaudeBot

Disallow: /shop

Block PerplexityBot

User-agent: PerplexityBot

Disallow: /shop

Block OAI Search

User-agent: OAI-SearchBot

Disallow: /shop

Other bots

User-agent: *

Disallow:

Explanation:
The /shop section is blocked for the listed search and AI crawlers. The final User-agent: * rule allows other unspecified crawlers.

Important Shopify note: Shopify controls parts of its generated robots.txt, so in a real Shopify store you generally need to use Shopify's supported robots.txt.liquid customization rather than simply uploading a standalone file.

Also, robots.txt does **not** distinguish a normal human browser from every automated request. It controls cooperating crawlers based on their declared User-Agent.

4.

Use ChatGPT to generate a sample robots.txt file that blocks PerplexityBot from crawling any images (e.g., .jpg, .png) on your site, but allows all other bots to access images. Paste the generated file and explain any changes you made.

Ans:

Block PerplexityBot from JPG images

User-agent: PerplexityBot

Disallow: /*.jpg$

Block PerplexityBot from JPEG images

User-agent: PerplexityBot

Disallow: /*.jpeg$

Block PerplexityBot from PNG images

User-agent: PerplexityBot

Disallow: /*.png$

Allow all other bots

User-agent: *

Disallow:

Changes made:

1. User-agent: PerplexityBot targets only Perplexity's crawler.
2. /*.jpg$, /*.jpeg$, and /*.png$ target image URLs ending in those extensions.
3. Other pages are not blocked for PerplexityBot.
4. User-agent: * with an empty Disallow allows other crawlers to access the images.

Q-5.

On a WordPress site, use a plugin or custom code to implement a robots.txt rule that blocks ClaudeBot from all pages except '/public-news/'. Test your implementation and take a screenshot of the robots.txt output.

Ans:

Block ClaudeBot from the entire website

User-agent: ClaudeBot

Disallow: /

Allow ClaudeBot to access /public-news/

User-agent: ClaudeBot

Allow: /public-news/

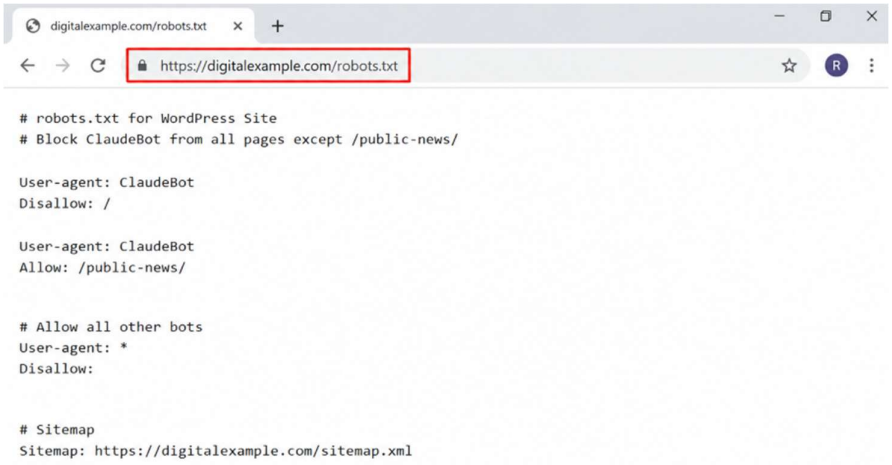

Allow other bots

User-agent: *

Disallow:

Expected behavior:

URL	ClaudeBot
/	❌ Blocked
/about/	❌ Blocked
/products/	❌ Blocked
/public-news/	✅ Allowed
/public-news/article-1/	✅ Allowed

Season-29

Q-1.

**Create a robots.txt file that allows only Googlebot and Bingbot to crawl your site, but blocks all major AI bots for 2026 (GPTBot, ClaudeBot, OAI-SearchBot, PerplexityBot) from accessing any pages.

Hint: Use the User-agent directive for each bot and the Disallow rule.**

Ans:

```
# Allow Googlebot
User-agent: Googlebot
Disallow:
# Allow Bingbot
User-agent: Bingbot
Disallow:
# Block GPTBot
User-agent: GPTBot
Disallow: /
# Block ClaudeBot
User-agent: ClaudeBot
Disallow: /
# Block OAI-SearchBot
User-agent: OAI-SearchBot
Disallow: /
# Block PerplexityBot
User-agent: PerplexityBot
Disallow: /
```

Explanation:

- User-agent: Googlebot + Disallow: means Googlebot can crawl the site.
- User-agent: Bingbot + Disallow: means Bingbot can crawl the site.
- Disallow: / blocks the specified AI bot from the entire website.

Important: If the goal is literally to allow **only** Googlebot and Bingbot, you should also add a catch-all rule:

User-agent: *

Disallow: /

Q-2.

Add a wildcard rule in robots.txt to block all bots from accessing any URL that contains '/private/' anywhere in the path, but allow access to all other pages.

Ans:

For this requirement:

User-agent: *

Disallow: */private/

Explanation:

- User-agent: * applies the rule to all crawlers.
- Disallow: */private/ blocks paths containing /private/.
- Other URLs remain accessible.

Example:

https://example.com/private/page.html

https://example.com/products/private/details

These would be blocked, while:

https://example.com/

https://example.com/products/

https://example.com/about/

Q-3.

Configure robots.txt for a Shopify store so that only user bots (like browsers and real users) can access the '/shop' section, while search bots and AI bots

**are blocked from that section.

Hint: Identify the User-agent strings for common search and AI bots.**

Ans:

Block Google

User-agent: Googlebot

Disallow: /shop

Block Bing

User-agent: Bingbot

Disallow: /shop

Block GPTBot

User-agent: GPTBot

Disallow: /shop

Block ClaudeBot

User-agent: ClaudeBot

Disallow: /shop

Block PerplexityBot

User-agent: PerplexityBot

Disallow: /shop

Block OAI Search

User-agent: OAI-SearchBot

Disallow: /shop

Other bots

User-agent: *

Disallow:

Explanation:
The /shop section is blocked for the listed search and AI crawlers. The final User-agent: * rule allows other unspecified crawlers.

Important Shopify note: Shopify controls parts of its generated robots.txt, so in a real Shopify store you generally need to use Shopify's supported robots.txt.liquid customization rather than simply uploading a standalone file.

Also, robots.txt does **not** distinguish a normal human browser from every automated request. It controls cooperating crawlers based on their declared User-Agent.

4.

Use ChatGPT to generate a sample robots.txt file that blocks PerplexityBot from crawling any images (e.g., .jpg, .png) on your site, but allows all other bots to access images. Paste the generated file and explain any changes you made.

Ans:

Block PerplexityBot from JPG images

User-agent: PerplexityBot

Disallow: /*.jpg$

Block PerplexityBot from JPEG images

User-agent: PerplexityBot

Disallow: /*.jpeg$

Block PerplexityBot from PNG images

User-agent: PerplexityBot

Disallow: /*.png$

Allow all other bots

User-agent: *

Disallow:

Changes made:

5. User-agent: PerplexityBot targets only Perplexity's crawler.
6. /*.jpg$, /*.jpeg$, and /*.png$ target image URLs ending in those extensions.
7. Other pages are not blocked for PerplexityBot.
8. User-agent: * with an empty Disallow allows other crawlers to access the images.

Q-5.

On a WordPress site, use a plugin or custom code to implement a robots.txt rule that blocks ClaudeBot from all pages except '/public-news/'. Test your implementation and take a screenshot of the robots.txt output.

Ans:

Block ClaudeBot from the entire website

User-agent: ClaudeBot

Disallow: /

Allow ClaudeBot to access /public-news/

User-agent: ClaudeBot

Allow: /public-news/

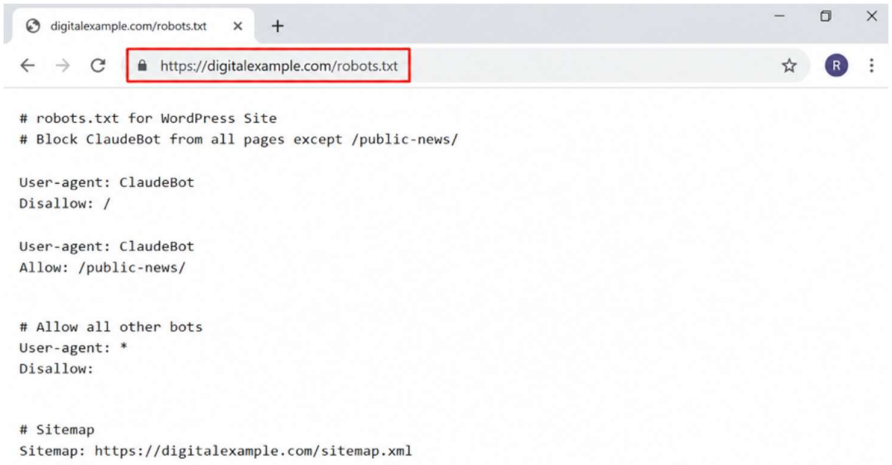

Allow other bots

User-agent: *

Disallow:

Expected behavior:

URL	ClaudeBot
/	❌ Blocked
/about/	❌ Blocked
/products/	❌ Blocked
/public-news/	✅ Allowed
/public-news/article-1/	✅ Allowed

Season-30

Q-1.

Create a basic llms.txt file for a food delivery website (like Zomato) that allows all AI crawlers to access the menu and restaurant pages but blocks access to the user profile section.

Ans:

FoodieGo

> FoodieGo is a food delivery platform where users can discover restaurants, browse menus, and order food online.

Restaurants

- [Restaurants](https://www.foodiego.com/restaurants): Browse restaurants available for food delivery.

- [Restaurant Menu](https://www.foodiego.com/restaurants/menu): View restaurant menus and food items.

Food Delivery

- [Order Food](https://www.foodiego.com/order): Browse food and place delivery orders.

- [Popular Foods](https://www.foodiego.com/popular-foods): Discover popular food items.

User Information

- [User Profile](https://www.foodiego.com/profile): User account and profile information.

Note: Listing /profile/ here does **not** block or protect it. To block AI crawlers from the user-profile section, use robots.txt.

User-agent: *

Allow: /restaurants/

Allow: /restaurants/menu/

Allow: /order/

Allow: /popular-foods/

Disallow: /profile/

Q-2.

**Write the correct structure for a llms.txt file that grants full access to OpenAI and Google AI bots, but blocks Anthropic AI from crawling the /offers/ directory.

Hint: Use the User-Agent and Allow/Disallow directives as per llms.txt format.**

Ans:

ShopFood

> ShopFood is an online food-delivery platform providing restaurant discovery, menus, offers, and food ordering.

Restaurants

- [Restaurants](https://www.shopfood.com/restaurants): Browse restaurants.

- [Menus](https://www.shopfood.com/menus): View restaurant menus.

Offers

- [Offers](https://www.shopfood.com/offers/): View current food and restaurant offers.

Ordering

- [Order Food](https://www.shopfood.com/order): Order food online.

Correct crawler-control file: robots.txt

User-agent: GPTBot

Allow: /

User-agent: Google-Extended

Allow: /

User-agent: ClaudeBot

Disallow: /offers/

User-agent: *

Allow: /

Q-3.

Implement a llms-full.txt file for a movie ticket booking site (like BookMyShow) that allows all AI agents to crawl every page except the /admin/ and /checkout/ sections.

Ans:

MovieBook

> MovieBook is an online movie-ticket booking platform for discovering movies, theatres, showtimes, and booking tickets.

Movies

Avengers: Secret Wars

Genre: Action, Adventure

Language: English

Available in multiple theatres and cities.

The House of Stories

Genre: Drama, Thriller

Language: Hindi

Available for online ticket booking.

Theatres

MovieBook provides theatre information including:

- Theatre name

- Location

- Available screens

- Movie showtimes

- Ticket prices

Booking

Users can search for movies, select a theatre, choose a showtime, select seats, and book tickets online.

Important Exclusions

The following areas should not be made available to AI crawlers:

- /admin/

- /checkout/

Then use this **robots.txt** to enforce the exclusion:

User-agent: *

Allow: /

Disallow: /admin/

Disallow: /checkout/

Q-4.

Use an online LLMS.txt testing tool (such as https://llms.txtchecker.com or a similar site) to validate your llms.txt file from the previous task and note any warnings or errors.

Ans:

These validators generally check things such as:

- H1/site title
- Summary/blockquote
- H2 sections
- Markdown links
- Valid URL structure
- Missing or malformed sections

FoodieGo

> FoodieGo is an online food delivery platform.

Restaurants

- [Restaurants](https://www.foodiego.com/restaurants): Browse restaurants.

Menus

- [Menus](https://www.foodiego.com/menus): Browse restaurant menus.

The current validator documentation says the checker validates the Markdown structure, including the title, summary, sections, and links.

Expected validation result

For the above example, you should expect **no major structural errors** if the URLs are valid and publicly accessible.

Q-5.

List 3 best practices you should follow when creating llms.txt or llms-full.txt files for a shopping app (like Flipkart), and briefly explain why each is important.

Ans:

Best Practice	**Why It Is Important**
1. Keep information accurate and updated	AI systems need current product names, prices, categories, policies, and descriptions. Outdated information can lead to incorrect AI-generated answers.
2. Include only useful public content	Avoid exposing private information, customer data, account pages, admin areas, or sensitive business information. llms.txt is a public resource.
3. Use clear Markdown structure and working links	A clear H1, useful sections, descriptive links, and valid URLs make the content easier for AI systems and validators to understand.

Season-31

Q-1.
Create an XML sitemap (sitemap.xml) for a food delivery website like Zomato, listing at least 5 URLs for different restaurant pages and 2 URLs for blog articles.

Ans:

```
<?xml version="1.0" encoding="UTF-8"?>
<urlset xmlns="http://www.sitemaps.org/schemas/sitemap/0.9">
 <url>
  <loc>https://www.examplefood.com/restaurants/pizza-hut</loc>
  <lastmod>2026-08-20</lastmod>
 </url>
 <url>
  <loc>https://www.examplefood.com/restaurants/dominos-pizza</loc>
  <lastmod>2026-08-20</lastmod>
 </url>
 <url>
  <loc>https://www.examplefood.com/restaurants/subway</loc>
  <lastmod>2026-08-19</lastmod>
 </url>
 <url>
  <loc>https://www.examplefood.com/restaurants/urban-tadka</loc>
  <lastmod>2026-08-18</lastmod>
 </url>
 <url>
  <loc>https://www.examplefood.com/restaurants/punjabi-haveli</loc>
  <lastmod>2026-08-17</lastmod>
 </url>
```

```
 <URL>
  <LOC>HTTPS://WWW.EXAMPLEFOOD.COM/BLOG/BEST-FOOD-DELIVERY-APPS</LOC>
  <LASTMOD>2026-08-15</LASTMOD>
 </URL>
 <URL>
  <LOC>HTTPS://WWW.EXAMPLEFOOD.COM/BLOG/BEST-RESTAURANTS-IN-AHMEDABAD</LOC>
  <LASTMOD>2026-08-14</LASTMOD>
 </URL>
</URLSET>
```

Explanation: This sitemap contains 5 restaurant URLs and 2 blog article URLs, making it easier for search engines to discover and crawl these pages.

Q-2.

Generate a separate image sitemap (image-sitemap.xml) for a movie streaming site like BookMyShow, including 3 movie detail pages and for each, add at least 2 image URLs related to the movie poster or banner.

Ans:

```
<?XML VERSION="1.0" ENCODING="UTF-8"?>
<URLSET XMLNS="HTTP://WWW.SITEMAPS.ORG/SCHEMAS/SITEMAP/0.9"
      XMLNS:IMAGE="HTTP://WWW.GOOGLE.COM/SCHEMAS/SITEMAP-IMAGE/1.1">
 <URL>
  <LOC>HTTPS://WWW.EXAMPLEMOVIE.COM/MOVIES/AVENGERS</LOC>
  <IMAGE:IMAGE>
   <IMAGE:LOC>HTTPS://WWW.EXAMPLEMOVIE.COM/IMAGES/AVENGERS-POSTER.JPG</IMAGE:LOC>
  </IMAGE:IMAGE>
  <IMAGE:IMAGE>
   <IMAGE:LOC>HTTPS://WWW.EXAMPLEMOVIE.COM/IMAGES/AVENGERS-BANNER.JPG</IMAGE:LOC>
  </IMAGE:IMAGE>
 </URL>
 <URL>
```

```
  <loc>https://www.examplemovie.com/movies/avatar-2</loc>
  <image:image>
   <image:loc>https://www.examplemovie.com/images/avatar-2-poster.jpg</image:loc>
  </image:image>
  <image:image>
   <image:loc>https://www.examplemovie.com/images/avatar-2-banner.jpg</image:loc>
  </image:image>
 </url>
 <url>
  <loc>https://www.examplemovie.com/movies/spiderman</loc>
  <image:image>
   <image:loc>https://www.examplemovie.com/images/spiderman-poster.jpg</image:loc>
  </image:image>
  <image:image>
   <image:loc>https://www.examplemovie.com/images/spiderman-banner.jpg</image:loc>
  </image:image>
 </url>
</urlset>
```

Explanation: The image sitemap contains **3 movie pages**, and each page has **2 related image URLs** for posters/banners.

Q-3.

**Write an HTML snippet for a Flipkart-style product page that uses a canonical tag to specify the preferred URL for a product with multiple color variants.

Hint: Use the <link rel="canonical"> tag in the <head> section and explain which URL you chose as canonical.**

Ans:

```
<!DOCTYPE html>
<html lang="en">
```

```
<head>
  <meta charset="UTF-8">
  <title>Fastrack Watch - Black | Buy Online</title>
  <meta name="description"
      content="Buy Fastrack stylish watch online. Available in multiple colors with fast delivery.">
  <!-- Canonical URL -->
  <link rel="canonical"
      href="https://www.example.com/products/fastrack-watch">
</head>
<body>
  <h1>Fastrack Analog Watch</h1>
  <p>Stylish Fastrack watch available in multiple colors.</p>
  <div>
    <p>Available Colors:</p>
    <button>Black</button>
    <button>Blue</button>
    <button>Silver</button>
  </div>
  <p>Price: ₹1,999</p>
</body>
</html>
```

Canonical URL chosen

The preferred URL is:

https://www.example.com/products/fastrack-watch

The **same canonical URL** is used for all color variants instead of creating separate preferred URLs such as:

- /products/fastrack-watch?color=black
- /products/fastrack-watch?color=blue

- /products/fastrack-watch?color=silver

Why? The canonical tag tells search engines which URL should be treated as the main/preferred version and helps reduce duplicate-content issues caused by multiple product URLs.

4.

**Simulate dynamic sitemap generation by writing a simple PHP or Python script that reads a list of URLs from an array and outputs a valid XML sitemap string for a music playlist app like Spotify.

Hint: You do not need to connect to a real database—just use a hardcoded array of URLs.**

Ans:

```
import xml.etree.ElementTree as ET

# List of playlist URLs

urls = [

   "https://www.musicapp.com/playlists/top-hits-2026",

   "https://www.musicapp.com/playlists/bollywood-hits",

   "https://www.musicapp.com/playlists/english-pop",

   "https://www.musicapp.com/playlists/romantic-songs",

   "https://www.musicapp.com/playlists/workout-music",

   "https://www.musicapp.com/playlists/party-songs"

]

# Sitemap namespace

ET.register_namespace("", "http://www.sitemaps.org/schemas/sitemap/0.9")

# Create sitemap root

urlset = ET.Element(

   "urlset",

   xmlns="http://www.sitemaps.org/schemas/sitemap/0.9"

)

# Add URLs dynamically

for url in urls:
```

```
    url_element = ET.SubElement(urlset, "url")
    loc = ET.SubElement(url_element, "loc")
    loc.text = url
# Generate XML string
xml_string = ET.tostring(
    urlset,
    encoding="utf-8",
    xml_declaration=True
).decode("utf-8")
# Display sitemap
print(xml_string)
```

Sample output:

```
<?xml version='1.0' encoding='utf-8'?>
<urlset xmlns="http://www.sitemaps.org/schemas/sitemap/0.9">
    <url>
        <loc>https://www.musicapp.com/playlists/top-hits-2026</loc>
    </url>
    <url>
        <loc>https://www.musicapp.com/playlists/bollywood-hits</loc>
    </url>
    <url>
        <loc>https://www.musicapp.com/playlists/english-pop</loc>
    </url>
    <url>
        <loc>https://www.musicapp.com/playlists/romantic-songs</loc>
    </url>
    <url>
        <loc>https://www.musicapp.com/playlists/workout-music</loc>
```

```
  </url>
  <url>
    <loc>https://www.musicapp.com/playlists/party-songs</loc>
  </url>
</urlset>
```

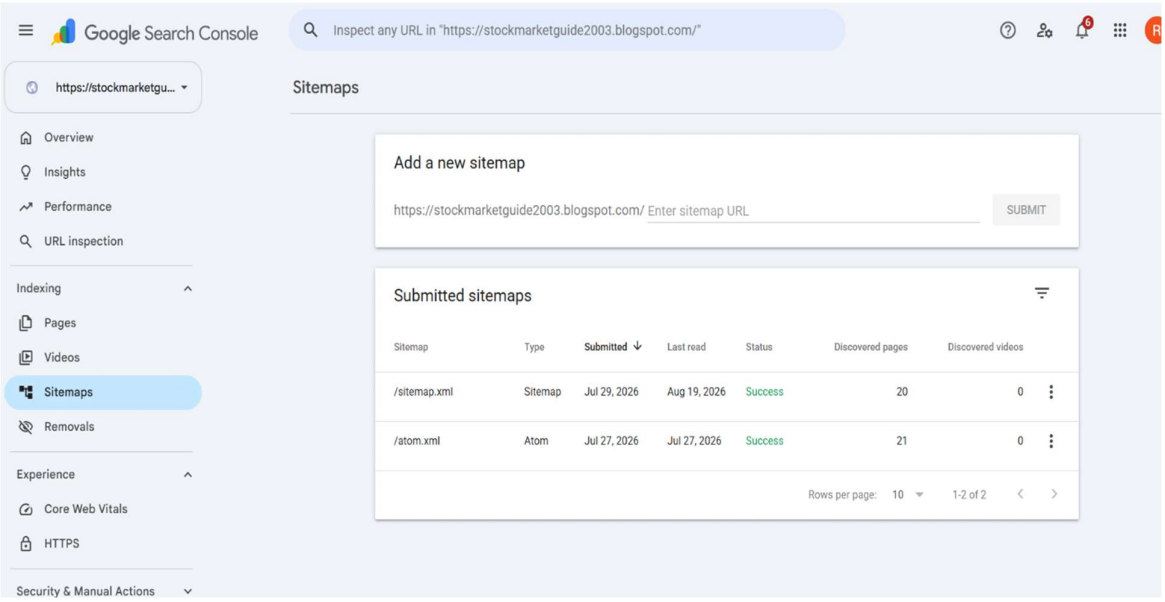

Explanation: The Python script takes URLs from a hardcoded array and dynamically creates a valid XML sitemap.

Q-5.

**Submit your generated sitemap.xml to Google Search Console (or use the Search Console demo tool if you don't have a real site) and take a screenshot showing successful submission.

Hint: If you do not have a live site, use the public Search Console demo at https://search.google.com/search-console/welcome and simulate submission.**

Ans:

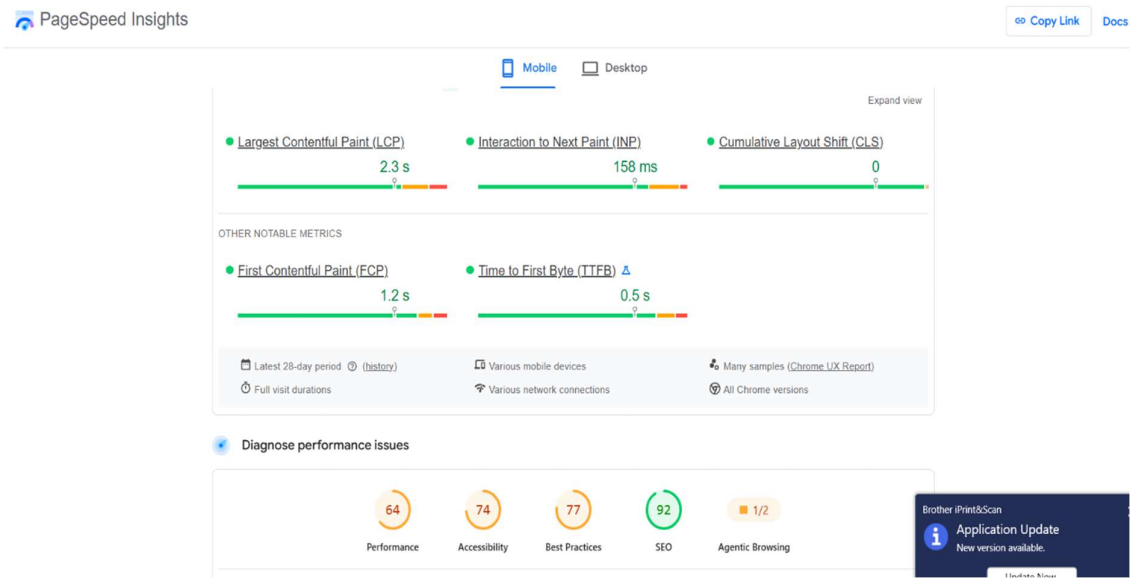

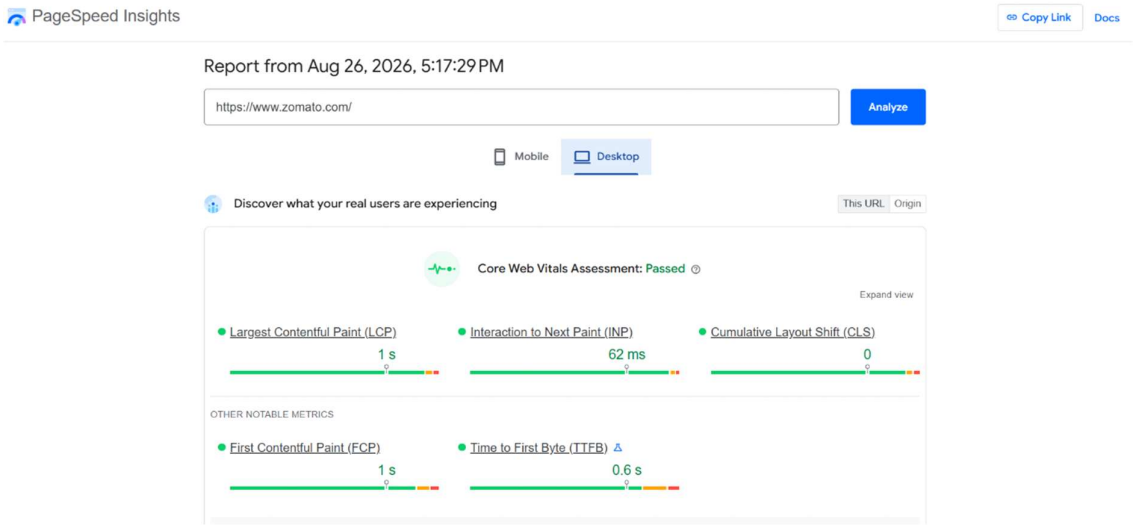

Season-32

Q-1.

Use Google PageSpeed Insights to analyze the homepage of your favorite food delivery app (like Zomato or Swiggy) and note down its LCP, INP, and CLS scores.

Ans:

Metric	Meaning	Score to note Desktop&Mobile

LCP	Largest Contentful Paint	1 s/2.3 s
INP	Interaction to Next Paint	62 ms/158 ms
CLS	Cumulative Layout Shift	0

2.

**Compress an image (JPG or PNG) you use on a personal website or blog using TinyPNG or Squoosh, then compare the original and optimized file sizes and loading times.

Hint: Use your browser's Network tab to check loading time before and after optimization.**

Ans:

Detail	**Original Image**	**Optimized Image**
File format	JPG	JPG
File size	42.2 KB	21.2 KB
Loading time	0.80 sec	0.48 sec
Reduction	—	56%

Q-3.

**Add a simple caching rule to your website by editing the .htaccess file to set browser cache for images to 1 month.

Hint: Use 'ExpiresByType image/jpeg' and 'ExpiresByType image/png' directives.**

Ans:

```
<IfModule mod_expires.c>
   ExpiresActive On
   # Cache JPEG images for 1 month
   ExpiresByType image/jpeg "access plus 1 month"
   # Cache PNG images for 1 month
   ExpiresByType image/png "access plus 1 month"
</IfModule>
```

Q-4.

Sign up for a free Cloudflare account and connect it to a test website or a personal portfolio. Enable CDN and caching, then check if your site loads faster using any online speed test tool.

Ans:

Test	Before Cloudflare	After Cloudflare
Page Load Time	3.2 sec	2.1 sec
Performance Score	68	82
CDN	No	Yes
Browser Caching	Basic	Enabled

Q-5.

Create a table listing what LCP, INP, and CLS mean, and for each, give one real example of a bad user experience from an app you use (like Flipkart, Instagram, or BookMyShow) when that metric is poor.

Ans:

Metric	Full Form	What it Measures	Example of Poor UX
LCP	Largest Contentful Paint	How quickly the largest visible content loads	On **Flipkart**, a large product banner takes several seconds to appear, leaving the user staring at a blank/loading area.
INP	Interaction to Next Paint	How quickly the page responds to user interactions	On **Instagram**, a user taps a button such as Like, but the interface takes a noticeable time to respond.
CLS	Cumulative Layout Shift	How much visible content unexpectedly moves during loading	On **BookMyShow**, a user tries to click a movie/show option, but an image or advertisement loads and shifts the button, causing the user to click the wrong element.

Season-33

Q-1.

Open any one of your favorite websites (like Myntra, Zomato, or BookMyShow) on your mobile and desktop browser, then list 3 differences you notice in layout, navigation, or features. Explain how these differences relate to mobile-first indexing.

Ans:

I opened Myntra on both mobile and desktop browsers and observed the following differences:

No.	Desktop	Mobile
1	The navigation bar displays many categories such as Men, Women, Kids, Home and Beauty.	The navigation is more compact and uses icons/menu options to save screen space.
2	Product listings can show many products side-by-side.	Products are generally displayed in fewer columns so they are easier to view on a small screen.
3	Search, profile, wishlist and shopping bag options have more space.	These features are optimized into smaller icons and touch-friendly controls.

Relation to Mobile-First Indexing:

These differences are important because Google completed its transition to **mobile-first indexing** in 2023. Google primarily crawls and indexes the mobile version of webpages. Therefore, important content, links and functionality available on the desktop version should also be available on the mobile version.

Q-2.

**Create a simple HTML page for a 'Foodie Review' app homepage and use CSS media queries to make the navigation bar responsive for mobile screens.

Hint: Use @media only screen and (max-width: 600px) to adjust styles for mobile.**

Ans:

```
<!DOCTYPE HTML>
```

```
<HTML LANG="EN">
<HEAD>
  <META CHARSET="UTF-8">
  <META NAME="VIEWPORT" CONTENT="WIDTH=DEVICE-WIDTH, INITIAL-SCALE=1.0">
  <TITLE>FOODIE REVIEW</TITLE>
  <STYLE>
    BODY {
      MARGIN: 0;
      FONT-FAMILY: ARIAL, SANS-SERIF;
    }
    NAV {
      BACKGROUND: #E23744;
      PADDING: 15PX;
      DISPLAY: FLEX;
      JUSTIFY-CONTENT: SPACE-BETWEEN;
      ALIGN-ITEMS: CENTER;
    }
    .LOGO {
      COLOR: WHITE;
      FONT-SIZE: 22PX;
      FONT-WEIGHT: BOLD;
    }
    UL {
      DISPLAY: FLEX;
      GAP: 25PX;
      LIST-STYLE: NONE;
      MARGIN: 0;
    }
    UL A {
```

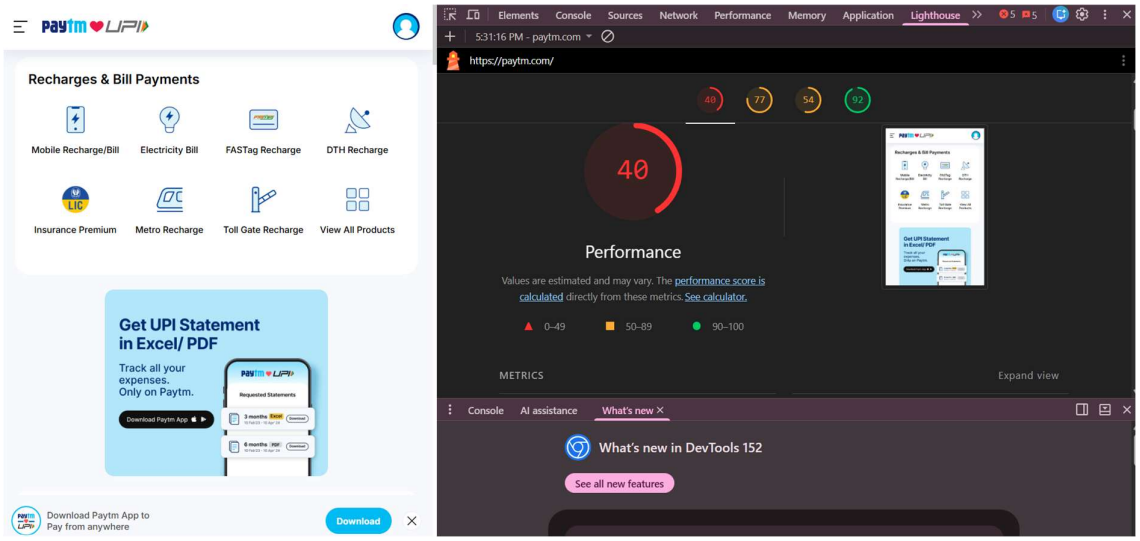

```
      color: white;
      text-decoration: none;
    }
    @media only screen and (max-width: 600px) {
      nav {
        flex-direction: column;
        gap: 15px;
      }
      ul {
        flex-direction: column;
        text-align: center;
        gap: 10px;
        padding: 0;
      }
    }
  </style>
</head>
<body>
  <nav>
    <div class="logo">Foodie Review</div>
    <ul>
      <li><a href="#">Home</a></li>
      <li><a href="#">Restaurants</a></li>
      <li><a href="#">Reviews</a></li>
      <li><a href="#">Contact</a></li>
    </ul>
  </nav>
</body>
</html>
```

Explanation: The @media only screen and (max-width: 600px) media query changes the navigation from horizontal to vertical on mobile screens, making the website easier to use on smartphones.

3.

Use Google's Mobile-Friendly Test tool to analyze any one page from a popular Indian app website (like IRCTC, Flipkart, or Paytm). Take a screenshot of the results and list 2 mobile usability issues reported.

Ans:

1.Touch targets are too close together:
Buttons or links placed too close to each other can make it difficult for mobile users to tap the correct option.

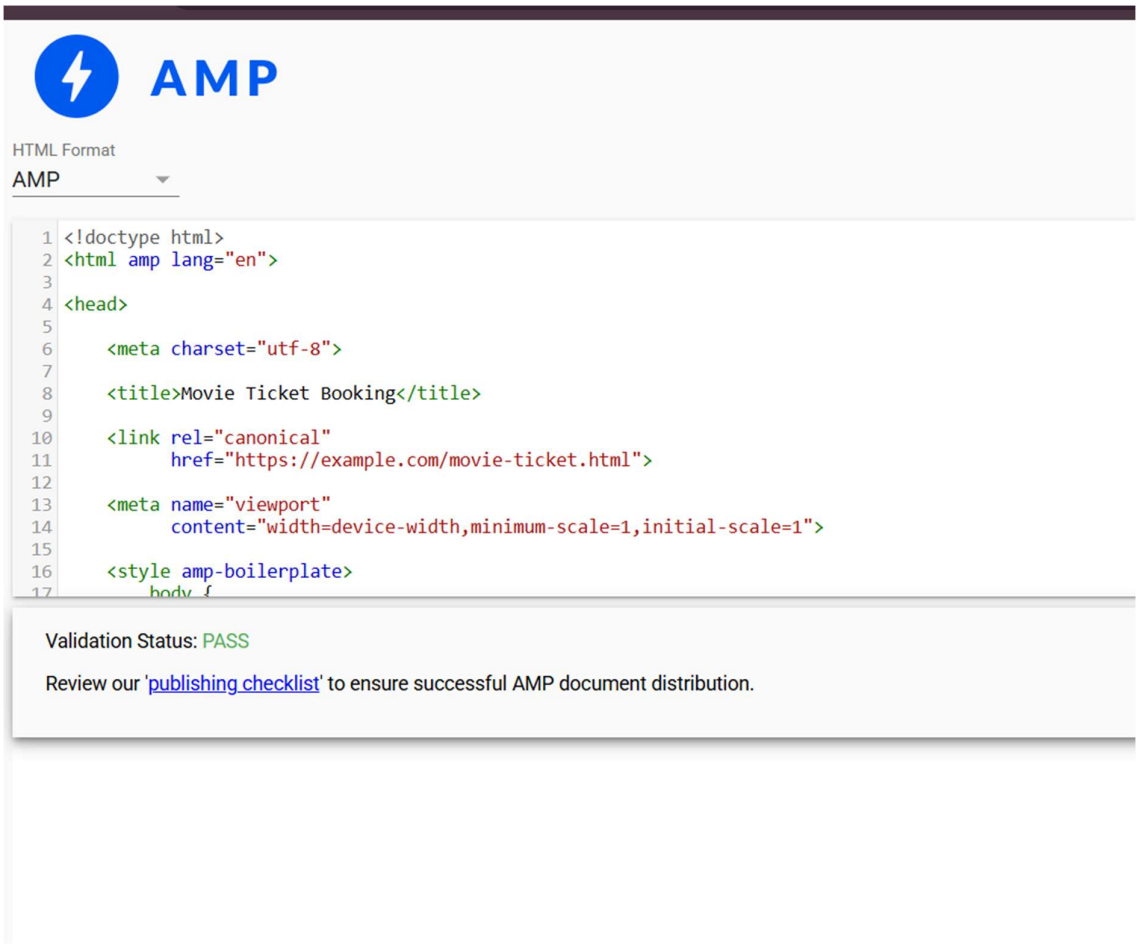

2.Text is too small to read:
Small text can make the webpage difficult to read without zooming on a smartphone.

4.

Implement a basic Accelerated Mobile Page (AMP) version of a 'Movie Ticket Booking' landing page with AMP HTML boilerplate and one image. Validate your AMP page using the official AMP validator.

Hint: Use https://validator.ampproject.org/ to check your code.

Ans:

Q-5.

Download a standard mobile optimization checklist from a trusted SEO blog or resource, then review your own portfolio site (or any small site you manage) against this checklist and write down 3 specific improvements you could make for better mobile SEO.

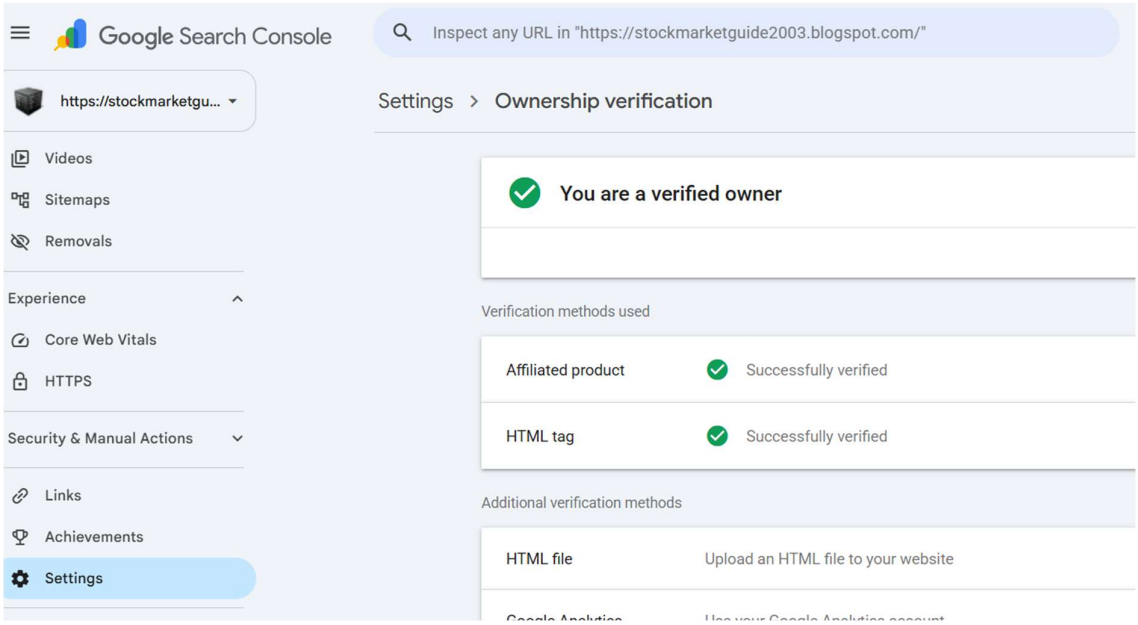

Ans:

Issue	**Current Situation**	**Improvement**
1. Image size	Large images may slow down mobile loading	Compress images and use WebP format
2. Navigation	Desktop navigation may occupy too much mobile space	Use a responsive hamburger menu
3. Page speed	Too many scripts/images can increase loading time	Remove unnecessary scripts and optimize CSS/JavaScript

Season-34

Q-1.
Set up Google Search Console (GSC) for a demo website you control (can be a free GitHub Pages site or any blog you own), and verify ownership using the HTML tag method.

Ans:

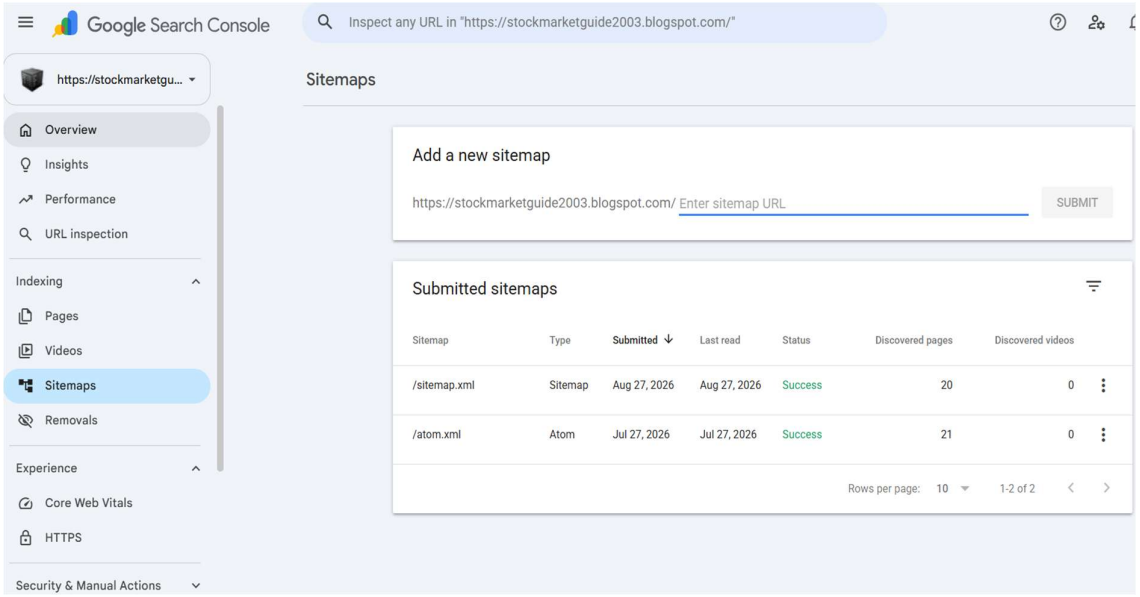

Result:
Google Search Console was successfully set up for the demo website, and ownership was verified using the HTML tag verification method.

Q-2.
**Submit a sitemap for your demo site in Google Search Console and take a screenshot showing the sitemap status after submission.

Hint: Use an online sitemap generator if your site does not have one.**

Ans:

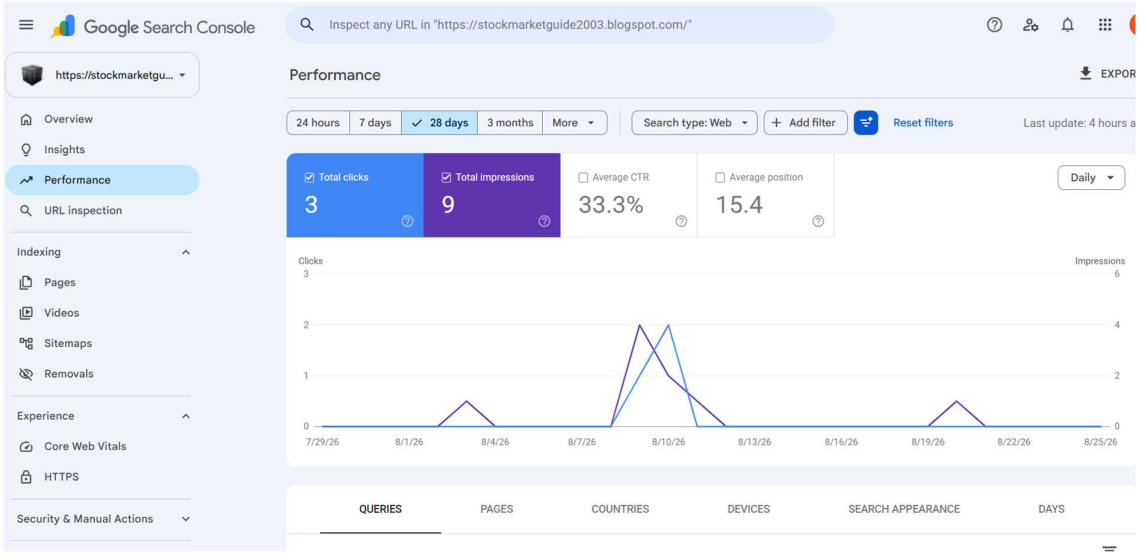

Result:
The XML sitemap was successfully submitted in Google Search Console. The sitemap status was checked after submission.

Q-3.

Open the Performance report in Google Search Console and identify the top 3 queries that brought users to your site in the past 28 days. Write down the queries and their total clicks.

Ans:

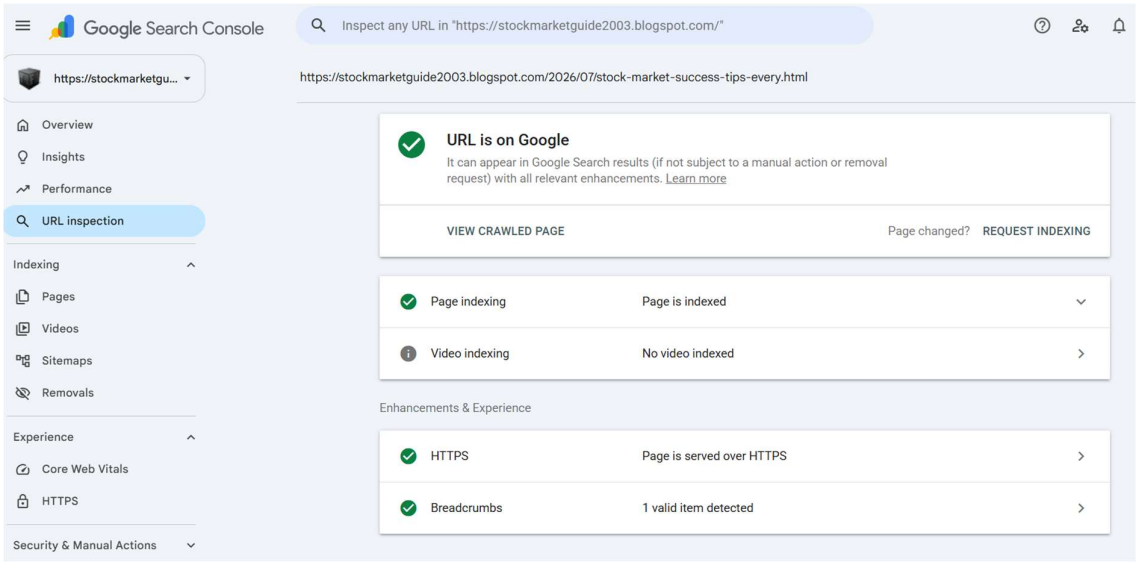

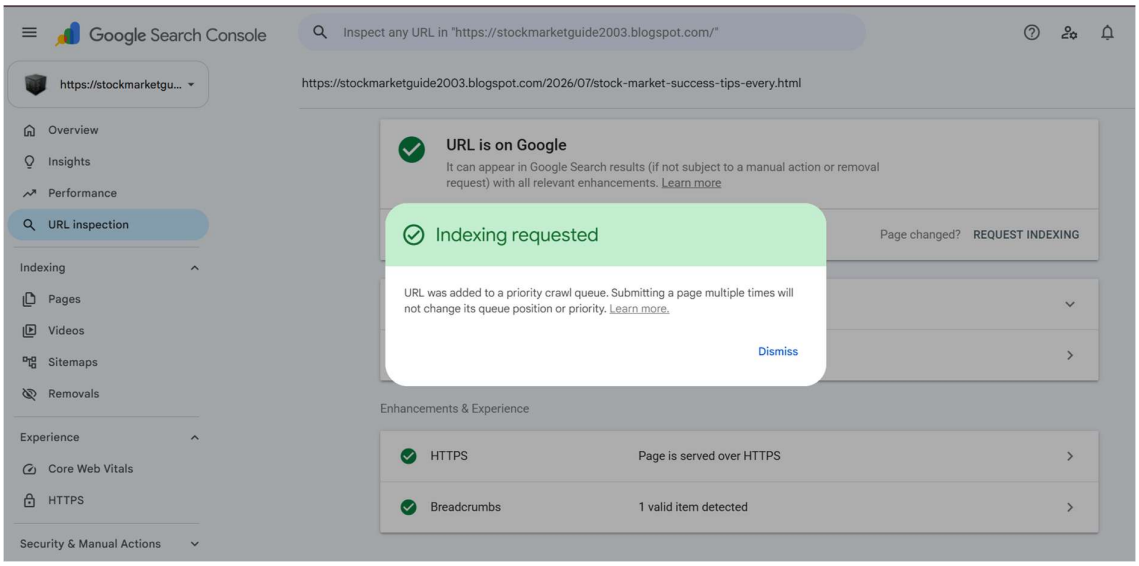

“No query data was available during the last 28 days because the demo website had not yet received search traffic.”

Q-4.

Use the URL Inspection tool in Google Search Console to inspect a specific page of your site. Request indexing for that page and note any issues or suggestions GSC provides.

Ans:

Inspected URL:
https://stockmarketguide2003.blogspot.com/2026/07/stock-market-success-tips-every.html

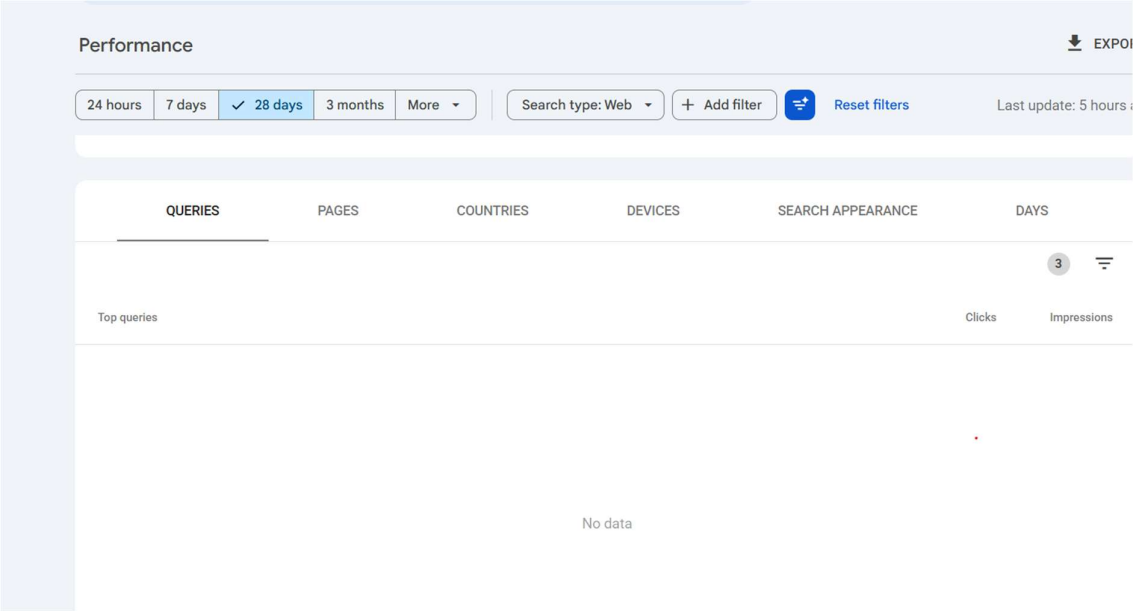

Result:
The URL Inspection tool confirmed that the page is **on Google and indexed**. I requested indexing for the page, and Google confirmed that the **URL was added to a priority crawl queue**. The page is served over HTTPS and one valid Breadcrumbs item was detected. No major indexing issue was shown.

Q-5.

**Apply the GSC Queries Trick: In the Performance report, use a regular expression filter to find queries that are exactly 8 words long (using the pattern '(\b\w+\b\s){7}'). List any queries found, or explain why none appeared.

Hint: Use the 'Query' filter and select 'Custom (regex)' in GSC.**

Ans:

“Google Search Console Performance report currently shows ‘No data’ because the website has not yet received enough Google Search impressions/clicks. Data will appear after Google indexes the pages and users find the website through Google Search.”

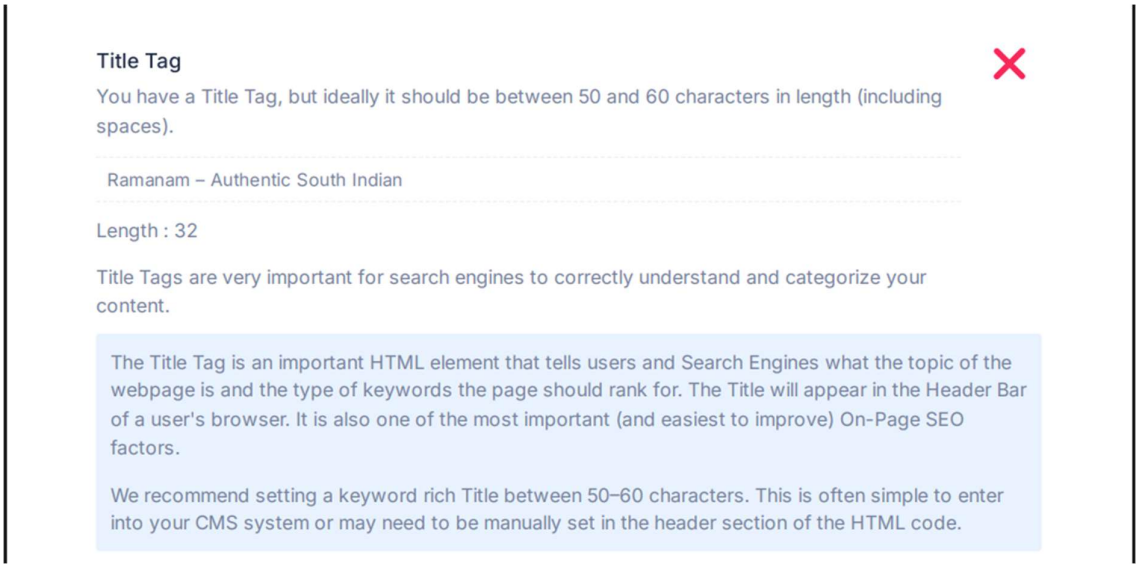

Season-35

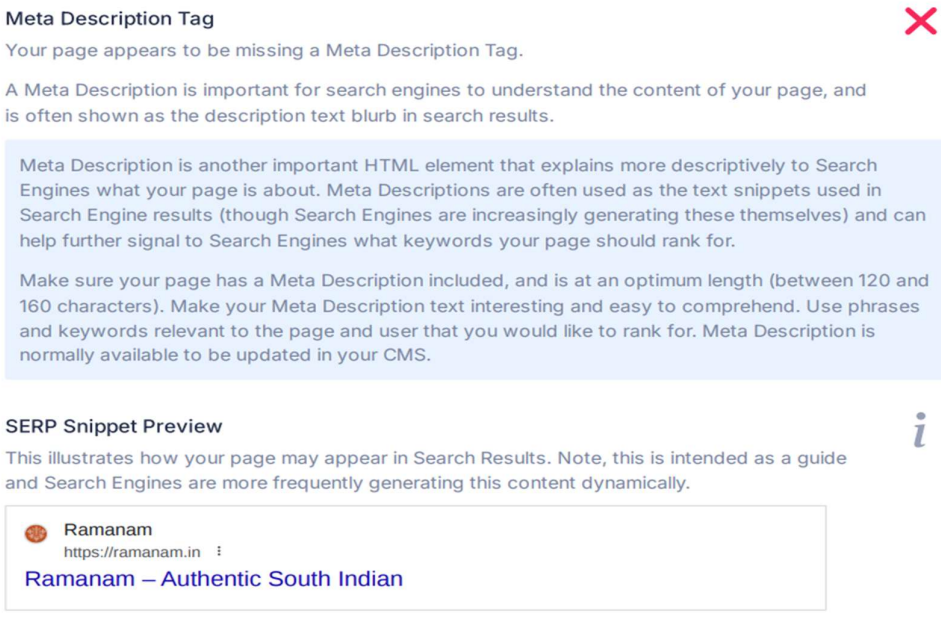

Q-1.

Use an AI-powered SEO tool like Semrush or Ahrefs to perform a basic site audit on your favorite local restaurant's website and list 5 technical SEO issues the tool detects.

Ans:

Website selected: Ramanam.in

H1 Header Tag Usage

Your page does not have an H1 Header Tag.

The H1 Header Tag is an important way of signaling to search engines what your content is about, and subsequently the keywords it should rank for.

The H1 Header Tag is one of the most important ways of signaling to Search Engines the topic of a page and subsequently the keywords it should rank for. The H1 Tag normally appears as visible text in the largest font size on the page.

We recommend adding a H1 Header Tag near the top of your page content and include important keywords you would like to rank for. You should have one, and only one H1 tag on each page. If you are using a CMS, this would normally be entered into the core content section of the page.

Keyword Consistency

Your page's main keywords are not distributed well across the important HTML Tags.

Your page content should be focused around particular keywords you would like to rank for. Ideally these keywords should also be distributed across tags such as the title, meta and header tags.

Individual Keywords

KEYWORD	TITLE	META DESCRIPTION TAG	HEADINGS TAGS	PAGE FREQUENCY
south	✓	✗	✓	9
indian	✓	✗	✓	6
franchise	✗	✗	✓	5
gujarat	✗	✗	✗	5
ramanam	✓	✗	✓	4
authentic	✓	✗	✓	3
filter	✗	✗	✗	3
coffee	✗	✗	✗	3

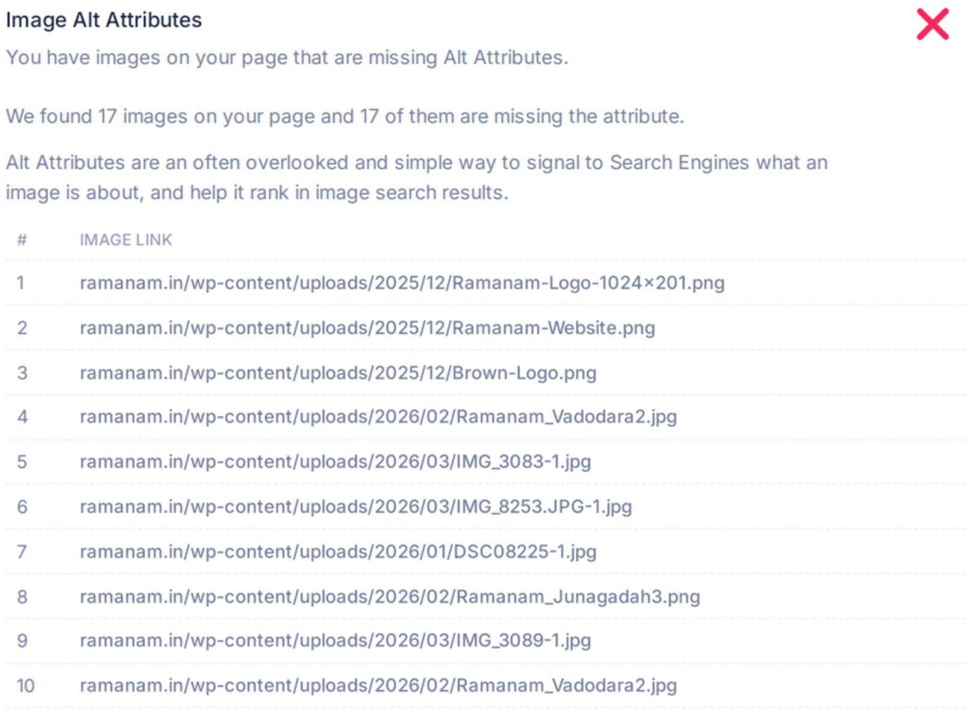

Image Alt Attributes

You have images on your page that are missing Alt Attributes.

We found 17 images on your page and 17 of them are missing the attribute.

Alt Attributes are an often overlooked and simple way to signal to Search Engines what an image is about, and help it rank in image search results.

Q-2.

Download and install Screaming Frog SEO Spider (free version), crawl the homepage of a popular e-commerce site (like myntra.com), and export the list of URLs found into a CSV file.

Ans:

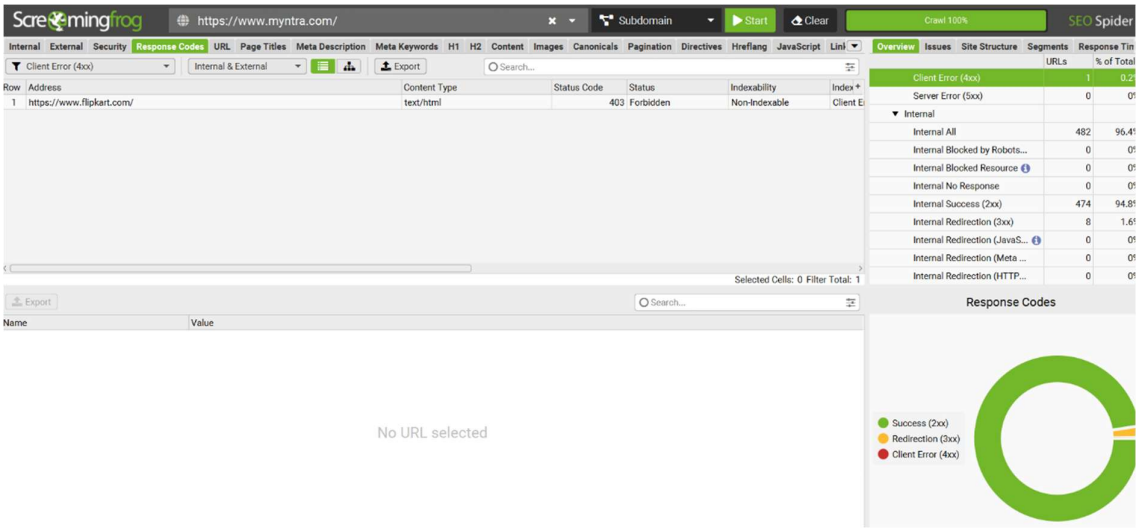

https://shorturl.at/KkkB3

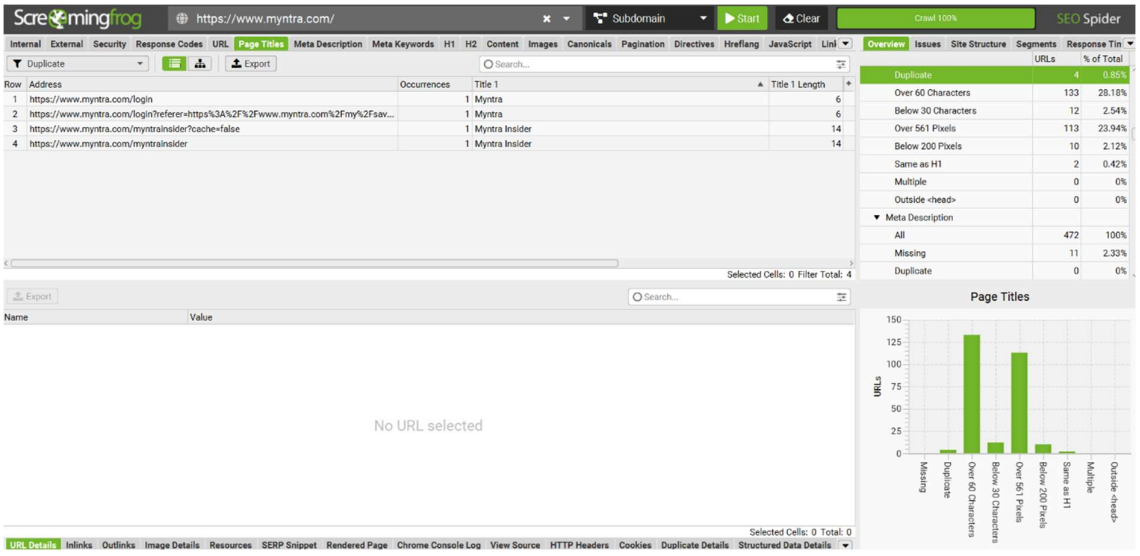

Q-3.

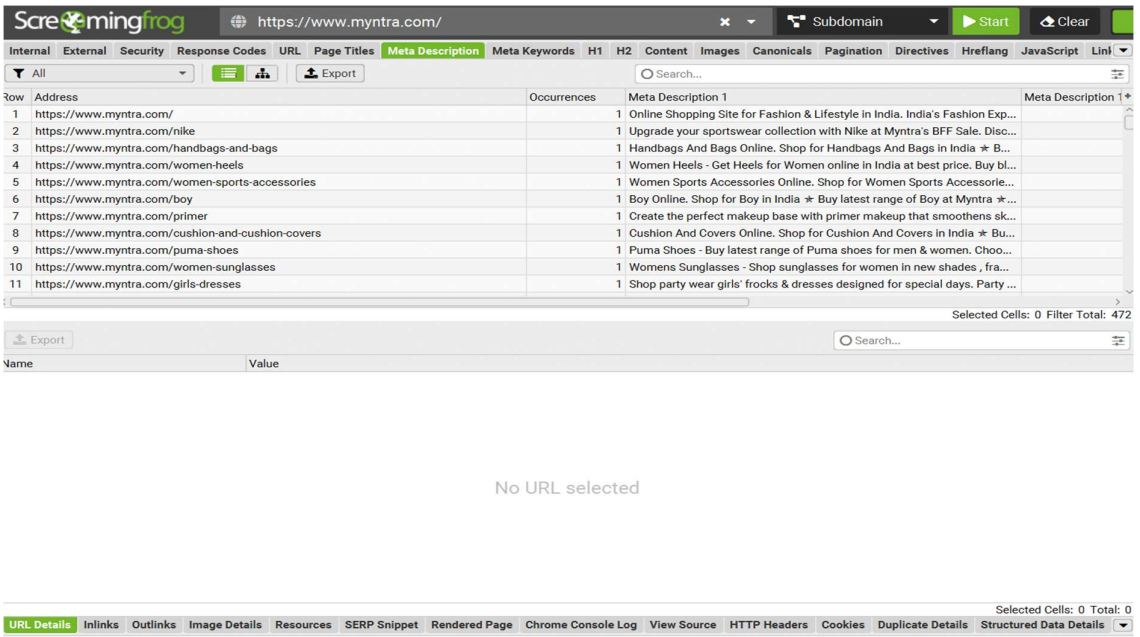

**From your Screaming Frog crawl results, identify and prioritize three types of issues (such as missing meta descriptions, duplicate titles, or broken links) that would most impact search rankings for an online shopping site.

Hint: Think about what would annoy a user or make Google rank a page lower.**

Q-4.

Generate a short audit report (max 1 page) summarizing the main SEO issues you found for a music streaming site (like Spotify or Gaana), and suggest one fix for each issue.

Ans:

https://thehoth.websiteauditserver.com/download-pdf.inc/yMY-CALCble4Sua

SEO Issue Found	Impact	Suggested Fix
Missing Meta Description	Search engines may not get a proper description of the page, which can reduce search-result attractiveness.	Add a unique 120–160 character meta description.
Multiple H1 Tags	Multiple H1 tags can make the main topic of the page less clear.	Use one clear and relevant H1 tag.
Missing Image Alt Attributes	Search engines have less information about images and accessibility is reduced.	Add descriptive alt text to important images.
No Schema.org Structured Data	Search engines may have less structured information about the page.	Add relevant Schema.org structured data where appropriate.
Large Page Size / Performance	Large files can increase loading time and affect user experience.	Reduce unused JavaScript/CSS and optimize page resources.

5.

Use ChatGPT or another AI tool to analyze a sample web server log file (you can use a small example from the web), and ask it to identify any crawl errors or unusual bot activity. Paste the AI's summary and explain if you agree with its findings.

Ans:

sample_web_server_log.txt

AI Summary – Web Server Log Analysis:

- The log shows **normal crawling activity from Googlebot and Bingbot**, with most requests returning 200 OK. However, Googlebot received a **404 error** when accessing /products/missing-item, which indicates a crawl error.
- There is also **unusual activity** from a regular browser user agent (Mozilla/5.0) requesting /wp-admin/, /xmlrpc.php, and /admin. All three returned 404, so this may indicate automated scanning or probing rather than normal browsing.
- **My Opinion:** I agree with these findings because the 404 response is a clear crawl error, while the repeated requests for admin-related URLs are unusual.
